Cloud Identity Provisioning

What's it about?
When integrating cloud services within their enterprises, one of the challenges organizations face is the effective and secure propagation of their identity stores through organizational boundaries.

The goal of this work is to investigate available solutions and provide prototypical implementation which will enable effective user management in cross-domain, heterogenous environment.

Goals:
- Research challenges and solutions
- Define a concept
- Provide prototypical implementation
- Evaluate results

Interests:
- Web technologies
- Protocols
- Identity Management
