Semantically Enriched Mandates

What's it about?
Mandate Information Service enables natural and legal persons to delegate or exhibit powers in various fields and daily tasks. Further extension of mandate representation with semantic information would facilitate additional use cases related to automated processing, reasoning and cross border scenarios.

Goals:
- Research concepts and solutions
- Define framework
- Provide prototypical implementation
- Evaluate results

Interests:
- Web and semantic technologies
- eGov related protocols
- Legal and business processes
