What is it about?
Austria relies on an electronic mandate service, which is capable of issuing electronic mandates on the fly for modeling empowerment between natural and other natural or legal persons in electronic services. In this project, it should be evaluated how the current protocol flow could be standardized using existing protocols such as SAML or OAuth.

Goals?
» Analyse the current protocol for electronic mandate exchange
» Evaluate how SAML or OAuth could be used instead
» Proof-of-Concept Implementation

Skills?
» Interest in secure user authentication and identity protocols
» Programming skills
