1 Propositional Logic

1.1 Lecture

1.1.1 Declarative Sentences

- 1. [Lecture] Look at the following statements and tick them if they are true.
 - \square "Give me the butter." is a declarative sentence.
 - \square Questions are always declarative sentences.
 - \square Declarative sentences can be true and false at the same time.
 - \boxtimes "My best friend is staying overnight." is a declarative sentence.
- 2. [Lecture] Model the following sentences as detailed as possible in propositional logic.
 - (a) Alice will either take the bike or the tram to get to the concert, not both.
 - (b) Students will have to take an exam at the end of the semester.
 - (c) If he is hungry and the fridge is not empty, he cooks for himself.

Solution:

(a) p: Alice will take the bike to get to the concert.

q: Alice will take the tram to get to the concert.

$$(p \land \neg q) \lor (\neg p \land q)$$

(b) p: Students will have to take an exam at the end of the semester.

p

(c) p: He is hungry.

q: The fridge is empty.

r: He cooks for himself.

$$p \land \neg q \to r$$

- 3. [Lecture] Model the following sentences as detailed as possible in propositional logic.
 - (a) If the air temperature is above 30° C, then the water temperature is above 20° C and I am able to go for a swim.
 - (b) Your kid will be safe if and only if it learns to swim.
 - (c) What time is it?

Solution:

(a) p: The air temperature is above 30°C.

q: The water temperature is above 20°C.

r: I am able to go for a swim.

$$p \to q \wedge r$$

(b) p: Your kid will be safe.

q: Your kid learns to swim.

$$p \leftrightarrow q$$

(c) This is no declarative sentence.

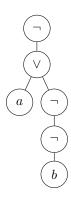

1.1.2 Syntax of Propositional Logic

4. [Lecture] Give the definition of well-formed formulas in propositional logic. Solution:

We give the definition of well-formed formulas in propositional logic using a grammar in Backus-Naur form (BNF) as:

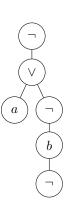

$$\varphi \coloneqq \ < \text{atomic proposition} > \mid \varphi \land \varphi \mid \varphi \lor \varphi \mid \neg \varphi \mid \varphi \rightarrow \varphi \mid \varphi \leftrightarrow \varphi \mid (\varphi)$$

- 5. [Lecture] Let p, q and r be a atomic propositions. Tick all statements that are true.
 - \square "¬ $p \land \lor q$ " is a propositional formula.
 - \boxtimes " $(p \land q) \lor (r \to p)$ " is a propositional formula.
 - \boxtimes "¬p" is a propositional formula.
 - \square " \vee " is a propositional formula.
 - \boxtimes "p" is a propositional formula.
- 6. [Lecture] Determine whether the string $\neg(a \lor \neg \neg b)$ is a well-formed formula using the parse tree. Explain your answer. Solution:

Every leaf is a atomic variable and the other nodes are labeled with logical operators, thus this is a well-formed formula.

7. [Lecture] Determine whether the string $\neg(a \lor \neg b \neg)$ is a well-formed formula using the parse tree. Explain your answer. Solution:

One leaf is labeled with a logical operator, which is not allowed. Thus this is not a well-formed formula.

1.1.3 Semantics of Propositional Logic

8. [Lecture] What do we refer to if we talk about the *syntax* of propositional logic and what do we understand under the *semantics* of propositional logic. What is the difference between syntax and semantic? Solution:

Syntax refers to grammar, while semantics refers to meaning.

Syntax is the set of rules needed to ensure a formula is a well-formed formula; semantics assigns a truth value to formulas by assigning a truth value to the propositional variables used in the formula and by assigning the meaning via truth table to the logical operators.

9. [Lecture] Give the definition of a model \mathcal{M} of a formula in propositional logic? Solution:

A model $\mathcal M$ of a propositional formula φ is an assignment of each propositional variable in φ to a truth value.

10. [Lecture] Consider the propositional formula $\varphi = \neg(\neg p \lor q) \to (p \land \neg r)$.

Find a propositional formula ψ that is syntactically different from φ , but semantically equivalent to φ . Show the semantic equivalence of φ and ψ using truth tables. Solution:

p	q	r	$\neg p \lor q$	$\neg(\neg p \lor q)$	$p \land \neg r$	$\varphi = \neg(\neg p \lor q) \to (p \land \neg r)$

T	F	\mathbf{T}	F	F	F	Т
T	\mathbf{T}	F	Т	Т	Т	Т
\mathbf{T}	\mathbf{T}	T	Т	F	Т	Т

12. [Lecture] Given is a formula $\varphi = (p \lor (\neg q \to r)) \land (\neg r \to p)$ and a model $\mathcal{M} = \{p = F, q = T, r = T\}$. Determine the truth value of φ for the given model \mathcal{M} using its parse tree. Solution:

1.1.4 Semantic Entailment, Equivalence, Satisfiability and Validity

13. [Lecture] Give the definition of semantic entailment.

Solution:

Let φ and ψ be formulas in propositional logic. We say that $\varphi \models \psi$ if and only if every model \mathcal{M} that satisfies φ ($\mathcal{M} \models \varphi$) also satisfies ψ ($\mathcal{M} \models \psi$).

14. [Lecture] Give the definition of semantic equivalence.

Solution:

Let φ and ψ be formulas in propositional logic. We say that φ and ψ are semantically equivalent if and only if $\varphi \models \psi$ and $\psi \models \varphi$ holds.

In that case we write $\varphi \equiv \psi$.

15. [Lecture] Give the definition of validity.

Solution:

Let φ be a formula of propositional logic. We call φ valid if $\models \varphi$ holds, i.e., any possible model for φ is a satisfying model.

16. [Lecture] Give the definition of satisfiability and unsatisfiability.

Solution:

Given a formula φ in propositional logic, we say that φ is *satisfiable* if it has a model in which is evaluates to true. We say that φ is unsatisfiable if there is no model under which φ evaluates to true.

17. [Lecture] Consider a formula φ in propositional logic. Let the number of propositional variables in φ be n. How many lines does the truth table for φ have? Solution:

 2^n

18. [Lecture] Consider a truth table for a propositional formula φ that has R rows. How many propositional variables does φ have? Solution:

1 - - (D)

 $log_2(R)$

- 19. [Lecture] Consider a formula φ in propositional logic. In the following list, tick all statements that are true.
 - \boxtimes If φ is not satisfiable, $\neg \varphi$ is valid.
 - \boxtimes If φ is valid, $\neg \varphi$ is not valid.
 - \boxtimes If φ is valid, $\neg \varphi$ is not satisfiable.
 - \boxtimes If φ is not valid, $\neg \varphi$ is satisfiable.
- 20. [Lecture] Given are the truth tables for the propositional logic formulas φ and ψ . Determine whether it holds that $\varphi \models \psi$, $\psi \models \varphi$, or neither.

p	q	r	φ	ψ
\mathbf{F}	\mathbf{F}	\mathbf{F}	F	F
\mathbf{F}	\mathbf{F}	\mathbf{T}	Т	Т
\mathbf{F}	\mathbf{T}	\mathbf{F}	F	F

- (b) Which of the formulas is satisfiable? Both of them are satisfiable.
- (c) Which of the formulas is valid? None of them are valid.
- (d) Which of the two formulas φ and ψ entails the other? It holds that $\psi \models \varphi$.

1.1.5 Modelling Example

22. [Lecture] Use propositional logic to solve Sudoku. Rules: A Sudoku grid consists of a 9x9 square, which is partitioned into nine 3x3 squares. The goal of the game is to write one number from 1 to 9 in each cell in such a way, that each row, each column, and each 3x3-square contains each number exactly once. Usually several numbers are already given.

	6		7			1	5	
		3	9			8		
		2	3				4	9
		7			4			
	4			9			8	
			1			4		
6	7				9	3		
		9			2	15		
	2	8			7		6	

Sudoku

In order to model SUDOKU using propositional logic, we first need to define the propositional variables that we want to use in our formula. We define variables x_{ijk} for every row i, for every column j, and for every value k. This encoding yields to 729 variables ranging from x_{111} to x_{999} . Using this variables, define the constraints for the rows, the columns, the $3x_{3}$ -squares and the predefined numbers.

Solution:

• Row-constraints: If a cell in a row has a certain value, then no other cell in that row can have that value. For each i, and each k we have:

$$x_{i1k} \rightarrow \neg x_{i2k} \wedge \neg x_{i3k} \wedge \dots \wedge \neg x_{i9k}$$

$$x_{i2k} \rightarrow \neg x_{i1k} \wedge \neg x_{i2k} \wedge \dots \wedge \neg x_{i9k}$$

$$\vdots$$

$$x_{i9k} \rightarrow \neg x_{i1k} \wedge \neg x_{i2k} \wedge \dots \wedge \neg x_{i8k}$$

• Column-constraints: If a cell in a column has a certain value, then no other cell in that column can have that value. For each j, and each k we have:

$$\begin{array}{c} x_{1jk} \rightarrow \neg x_{2jk} \wedge \neg x_{3jk} \wedge \ldots \wedge \neg x_{9jk} \\ \\ x_{2jk} \rightarrow \neg x_{1jk} \wedge \neg x_{2jk} \wedge \ldots \wedge \neg x_{9jk} \\ \\ \vdots \\ \\ x_{9jk} \rightarrow \neg x_{1jk} \wedge \neg x_{2jk} \wedge \ldots \wedge \neg x_{8jk} \end{array}$$

• Square-constraints: If a cell in a 3x3 square has a certain value, then no other cell in that square can have that value. For the first square, we have for each k:

$$x_{11k} \rightarrow \neg x_{12k} \wedge \neg x_{13k} \wedge \neg x_{21k} \wedge \neg x_{22k} \wedge \neg x_{23k} \wedge \neg x_{31k} \wedge \neg x_{32k} \wedge \neg x_{33k}$$

$$\vdots$$

$$x_{33k} \rightarrow \neg x_{11k} \wedge \neg x_{12k} \wedge \neg x_{13k} \wedge \neg x_{21k} \wedge \neg x_{22k} \wedge \neg x_{23k} \wedge \neg x_{31k} \wedge \neg x_{32k}$$

The constraints for the remaining squares are similar.

• Predefined-number-constraints: If a cell has a predefined value, we need to set the corresponding variable to true, e.g., the cell in the fifth row and the fifth column has the value 9. Therefore we have

 x_{559} .

• Cell-constraints: Each cell must contain a number ranging from one to nine. For each i, and each j we have

$$x_{ij1} \vee x_{ij2} \vee ... \vee x_{ij9}$$
.

On its own, this constraint would allow for a cell to have more than one value. However, this is not possible due to the other constraints.

To construct the final propositional formula, all constraints need to be connected via conjunctions. A satisfying assignment for the final formula represents one possible solution for the Sudoku puzzle. In case that there does not exists a solution, the SAT sovler would return UNSAT.

1.2 Self-Assessment

1.2.1 Declarative Sentences

- 23. [Self-Assessment] Model the following sentences as detailed as possible in propositional logic.
 - (a) If all students prepare themselves appropriately, everyone will pass the exam.
 - (b) Graz is the second biggest city of Austria.
 - (c) If I only had more money!

Solution:

There is no solution available for this question yet.

- 24. [Self-Assessment] Model the following sentences as detailed as possible in propositional logic.
 - (a) If I pass the exam, then if I pass it with more than 90 Points I will get the best grade possible.
 - (b) Do you like Pizza?
 - (c) All cats hate dogs and love mice.

Solution:

There is no solution available for this question yet.

- 25. [Self-Assessment] Model the following sentences as detailed as possible in propositional logic.
 - (a) Bob will win the lottery, if and only if he gets all the numbers right.
 - (b) Mozart was born in Salzburg, not in Innsbruck.
 - (c) If the year is a leap-year, then February will have 29 days.

Solution:

There is no solution available for this question yet.

- 26. [Self-Assessment] Model the following sentences as detailed as possible in propositional logic.
 - (a) Either Bob, Alice or neither are going to the lecture today.
 - (b) Today is Friday, if and only if yesterday was Thursday and tomorrow is not Sunday.
 - (c) Try to be patient and please be quiet.

Solution:

There is no solution available for this question yet.

- 27. [Self-Assessment] Model the following sentences as detailed as possible in propositional logic.
 - (a) If a formula is unsat, it cannot be valid.
 - (b) It can be proven that there exists an infinite number of primes.
 - (c) A sentence is called declarative, if and only if it can be assigned a truth value.

Solution:

- 28. [Self-Assessment] Model the following sentences as detailed as possible in propositional logic.
 - (a) Today it will be either be foggy or it will rain today, but not both.
 - (b) If and only if everybody comes in a costume to the party, we have a carnival.
 - (c) No pain, no gain.

Solution:

There is no solution available for this question yet.

- 29. [Self-Assessment] Model the following sentences as detailed as possible in propositional logic.
 - (a) If all students pass, the professor will be happy.
 - (b) Bob is taller than Alice, but shorter than Charlie.
 - (c) If there is lightning there must be thunder and vice versa.

Solution:

There is no solution available for this question yet.

- 30. [Self-Assessment] Model the following sentences as detailed as possible in propositional logic.
 - (a) If the past hurts, you can either run from it, or learn from it.
 - (b) If life gives you lemons, make lemonade.
 - (c) A good pizza has salami or tuna on it, but not both at the same time.

Solution:

There is no solution available for this question yet.

1.2.2 Syntax of Propositional Logic

31. [Self-Assessment] Consider a formula φ in propositional logic. How is a propositional formula constructed and of what elements does it consist of?

Solution:

Propositional logic formulas consist of atomic propositions, logical operators, and parentheses.

The well-formed formulas of propositional logic are those which we obtain by using the construction rules below:

$$\varphi \coloneqq \ < \text{atomic proposition} > \mid \varphi \land \varphi \mid \varphi \lor \varphi \mid \neg \varphi \mid \varphi \rightarrow \varphi \mid \varphi \leftrightarrow \varphi \mid (\varphi)$$

32. [Self-Assessment] How can you determine using a parse tree whether a string is a well-formed formula? Solution:

33. [Self-Assessment] Determine whether the string $(a \lor b) \to (\neg(x\neg))$ is a well-formed formula using the parse tree. Explain your answer. Solution:

There is no solution available for this question yet.

34. [Self-Assessment] Given the formula $\varphi = p \lor q \land q \to \neg r \leftrightarrow \neg p \land s$, how should the formula be interpreted according to the binding priorities? Make brackets to make the correct binding priorities clear and draw the parse tree for φ . Solution:

There is no solution available for this question yet.

1.2.3 Semantics of Propositional Logic

35. [Self-Assessment] Give the definition of the *semantics* of propositional logic. Solution:

The semantics of propositional logic define truth values to propositional variables and defines the rules for the propositional operators via their corresponding *truth tables*.

36. [Self-Assessment] Give the definition of a model \mathcal{M} of a formula in propositional logic? Solution:

Satisfying Model: truth assignment such that the formula resolves to true. Falsifying Model: truth assignment such that the formula resolves to false. We write: $\mathcal{M} \models \varphi$: The model satisfies the formula. and $\mathcal{M} \nvDash \varphi$: The model does not satisfy the formula.

37. [Self-Assessment] What is the difference between a satisfying model and a falsifying model of a formula in propositional logic? Give a satisfying and a falsifying model for the formula $\varphi = a \rightarrow b$.

Solution:

There is no solution available for this question yet.

38. [Self-Assessment] Given is a formula $\varphi = ((p \land \neg q) \to (p \lor \neg r)) \land (\neg q \to \neg r)$ and a model $\mathcal{M} = \{p = T, q = F, r = T\}$. Determine the truth value of φ for the given model \mathcal{M} using its parse tree. Solution:

There is no solution available for this question yet.

39. [Self-Assessment] Given is a formula $\varphi = ((q \to \neg p) \lor r) \to (q \land (r \to p))$. Determine a satisfying model \mathcal{M}_1 and a falsifying model \mathcal{M}_2 using its parse tree. Solution:

There is no solution available for this question yet.

40. [Self-Assessment] Given is a formula $\varphi = (\neg(r \leftrightarrow q) \rightarrow \neg r) \land (\neg(r \rightarrow q) \lor (p \rightarrow q))$. Determine a satisfying model \mathcal{M}_1 and a falsifying model \mathcal{M}_2 using its parse tree. Solution:

1.2.4 Semantic Entailment, Equivalence, Satisfiability and Validity

41.	[Self-Assessment]	Consider a	formula	φ in	propositional	logic.	In the	following	list,	tick a	all
	statements that a	are true.									

- \square If φ is a tautology, a falsifying model can be found.
- \square If φ is equivalent to ψ , a satisfying model for φ always satisfies ψ .
- \square If φ has no satisfying model, it is called a tautology.
- \square If φ semantically entails ψ , a satisfying model for ψ always satisfies φ .
- 42. [Self-Assessment] Why are truth tables, in general, not used to determine equivalence of large formulas?

Solution:

There is no solution available for this question yet.

43. [Self-Assessment] Consider a formula φ in propositional logic. You want to test whether φ is *valid*. However, you only have a procedure for checking satisfiability. Describe how to use this procedure to determine whether φ is valid.

Solution:

There is no solution available for this question yet.

- 44. [Self-Assessment] Consider the propositional formulas $\varphi = (p \lor q) \to r$, and $\psi = r \lor (\neg p \land \neg q)$.
 - (a) Fill out the truth table for φ and ψ (and their subformulas).

p	q	r	$\neg p$	$\neg q$	$p \lor q$	$\neg p \land \neg q$	φ	ψ
\mathbf{F}	F	F						
\mathbf{F}	F	\mathbf{T}						
\mathbf{F}	T	F						
\mathbf{F}	T	\mathbf{T}						
\mathbf{T}	F	F						
\mathbf{T}	F	T						
\mathbf{T}	T	F						
\mathbf{T}	\mathbf{T}	\mathbf{T}						

- (b) Which of the formulas is satisfiable?
- (c) Which of the formulas is valid?
- (d) Is φ equivalent to ψ ?
- (e) Does φ semantically entail ψ ?
- (f) Does ψ semantically entail φ ?

Solution:

There is no solution available for this question yet.

45. [Self-Assessment] Consider the Boolean functions φ_1 and φ_2 over variables p, q, and r. Their truth table is given below.

p	q	r	φ_1	φ_2	ψ	γ
F	F	F	F	F		
F	\mathbf{F}	\mathbf{T}	\mathbf{F}	F		
\mathbf{F}	\mathbf{T}	\mathbf{F}	\mathbf{T}	\mathbf{T}		
\mathbf{F}	\mathbf{T}	\mathbf{T}	\mathbf{F}	F		
\mathbf{T}	F	\mathbf{F}	\mathbf{T}	F		
\mathbf{T}	F	\mathbf{T}	\mathbf{F}	\mathbf{T}		
\mathbf{T}	\mathbf{T}	\mathbf{F}	\mathbf{F}	F		
\mathbf{T}	\mathbf{T}	\mathbf{T}	\mathbf{F}	F		

- (a) Fill the column for ψ such that φ_1 entails ψ (i.e., $\varphi_1 \models \psi$), but φ_2 does not entail ψ (i.e., $\varphi_2 \nvDash \psi$).
- (b) Fill the column for γ such that φ_1 implies γ (i.e., $\varphi_1 \to \gamma$) as well as φ_2 implies γ (i.e., $\varphi_2 \to \gamma$).

Solution:

There is no solution available for this question yet.

- 46. [Self-Assessment] Consider the propositional formula $\varphi = p \to (q \to r)$.
 - (a) Fill out the truth table for φ and its subformulas.

p	q	r	$(q \rightarrow r)$	$\varphi = p \to (q \to r)$
\mathbf{F}	\mathbf{F}	\mathbf{F}		
\mathbf{F}	\mathbf{F}	\mathbf{T}		
\mathbf{F}	\mathbf{T}	F		
\mathbf{F}	\mathbf{T}	\mathbf{T}		
\mathbf{T}	\mathbf{F}	F		
\mathbf{T}	\mathbf{F}	\mathbf{T}		
\mathbf{T}	\mathbf{T}	F		
\mathbf{T}	\mathbf{T}	\mathbf{T}		

- (b) Is φ satisfiable?
- (c) Give a formula ψ that is semantically equivalent to φ , but does not use the " \rightarrow "
- (d) How can you check whether ψ is semantically equivalent to φ ?

Solution:

- 47. [Self-Assessment] Consider the propositional formula $\varphi = (p \to q) \land (q \to r) \land (\neg r \lor p)$.
 - (a) Fill out the truth table for φ (and its subformulas).

p	q	r	$(p \to q)$	$(q \rightarrow r)$	$\neg r$	$(\neg r \lor p)$	φ
\mathbf{F}	F	F					
\mathbf{F}	F	\mathbf{T}					
\mathbf{F}	\mathbf{T}	F					
\mathbf{F}	\mathbf{T}	\mathbf{T}					
\mathbf{T}	\mathbf{F}	F					
\mathbf{T}	\mathbf{F}	\mathbf{T}					
\mathbf{T}	\mathbf{T}	F					
\mathbf{T}	\mathbf{T}	\mathbf{T}					

- (b) Is φ satisfiable?
- (c) Is φ valid?
- (d) Give a formula ψ that semantically entails φ (i.e., it should be the case that $\psi \models \varphi$).
- (e) How can you check, using a truth table, whether ψ semantically entails φ ?

Solution:

There is no solution available for this question yet.

- 48. [Self-Assessment] Consider the propositional formula $\varphi = (\neg p \to r) \land (r \to \neg p) \land q$.
 - (a) Fill out the truth table for φ (and its subformulas).

p	q	r	$\neg p$	$(\neg p \to r)$	$(r \to \neg p)$	φ
F	F	\mathbf{F}				
\mathbf{F}	\mathbf{F}	$ \mathbf{T} $				
\mathbf{F}	\mathbf{T}	F				
\mathbf{F}	\mathbf{T}	T				
\mathbf{T}	\mathbf{F}	F				
\mathbf{T}	F	\mathbf{T}				
\mathbf{T}	\mathbf{T}	F				
\mathbf{T}	\mathbf{T}	\mathbf{T}				

- (b) Is the negation of φ satisfiable?
- (c) Is the negation of φ valid?
- (d) Give a formula ψ that semantically entails φ (i.e., it should be the case that $\psi \models \varphi$).
- (e) Give a formula ψ such that φ semantically entails ψ (i.e., it should be the case that $\varphi \models \psi$).

Solution:

There is no solution available for this question yet.

- 49. [Self-Assessment] Consider the propositional formula $\varphi = ((p \to q) \land (\neg p \to \neg q)) \to r$.
 - (a) Fill out the truth table for φ and its subformulas.

p	q	r	$\neg p$	$\neg q$	$(p \rightarrow q)$	$(\neg p \to \neg q)$	$(p \to q) \land (\neg p \to \neg q)$	φ
\mathbf{F}	\mathbf{F}	\mathbf{F}						
\mathbf{F}	\mathbf{F}	\mathbf{T}						
\mathbf{F}	T	F						
\mathbf{F}	T	\mathbf{T}						
\mathbf{T}	\mathbf{F}	F						
\mathbf{T}	\mathbf{F}	\mathbf{T}						
\mathbf{T}	\mathbf{T}	F						
\mathbf{T}	\mathbf{T}	\mathbf{T}						

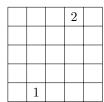

- (b) Is φ unsatisfiable?
- (c) Is the negation of φ valid?
- (d) Give a formula ψ that is semantically equivalent to φ , but does not use the " \rightarrow " connective.

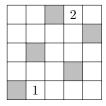

Solution:

1.2.5 Modelling Example

50. [Self-Assessment] Describe the Latin Square Puzzle using propositional logic.

In the Latin Square Puzzle one has to color cells in an $(n \times n)$ grid such that there is exactly one colored cell in each row and each column. Furthermore, colored cells must not be adjacent to each other (also not diagonally). Numbers contained in certain cells of the grid indicate the exact number of colored cells that have to be adjacent (including diagonally) to it. Numbered cells can contain the numbers 0, 1, 2 and cannot be colored.

Example Latin Square Puzzle and its solution

Find propositional formulas which describe the puzzle and which could be used to solve it. Focus on explaining the concept of the formulas. You do not have to explicitly list all formulas and you do not have to solve the puzzle.

Hints: Use propositional atoms $c_{i,j}$, $c_{i,j,0}$, $c_{i,j,1}$, $c_{i,j,2}$ to represent each cell of the $(n \times n)$ game board. If $c_{i,j}$ has the value True, the cell i, j is colored, otherwise it is not colored. If $c_{i,j,x}$ has the value True, the cell i, j contains the number x.

Express the following constraints:

- (a) There is exactly one colored cell in row i.
- (b) No colored cells are adjacent to each other.
- (c) No numbered cells can be colored.
- (d) Numbered cells are adjacent to the indicated amount of colored cells.

Solution:

2 Natural deduction for Propositional Logic

2.1 Lecture

For each of the following sequents, either provide a natural deduction proof, or a counter-example that proves the sequent invalid.

For proofs, clearly indicate which rule, and what assumptions/premises/intermediate results you are using in each step. Also clearly indicate the scope of any boxes you use.

For counterexamples, give a complete model. Show that the model satisfies the premise(s) of the sequent in question, but does not satisfy the respective conclusion.

2.1.1 Rules for natural deduction

1. [Lecture] Give the definition of a sequent. Give an example of a sequent and name the parts the sequent consists of. Solution:

A sequent is an expression of the form

$$\varphi_1, \varphi_2, ..., \varphi_n \vdash \psi.$$

 $\varphi_1, \varphi_2, ..., \varphi_n$ are called premises. ψ is called the conclusion. The premises entail the conclusion. This means that for any valid sequence, we can proof that the conclusion follows from the premises.

- 2. [Lecture] Look at the following statements and tick them if they are true.
 - \boxtimes In a sequent, premises entail a conclusion.
 - \square In a sequent, conclusions entail a premise.
 - \square A sequent is valid, if no proof for it can be found.
 - \boxtimes A sequent is valid, if a proof for it can be found.
- 3. [Lecture] State the AND-introduction rule (\land i). Explain how the rule works. Solution:

$$\frac{\varphi \quad \psi}{\varphi \wedge \psi} \wedge i$$

If we have two formulas that are known to be true separately, then we can conclude that the conjunction of the two premises must also be true.

4. [Lecture] $p, q, r \vdash p \land (q \land r)$ Solution:

This sequent is provable.

- 1. p prem.
- 2. q prem.
- r prem.
- 4. $q \wedge r$ \wedge i 2,3
- 5. $p \wedge (q \wedge r) \wedge i \ 1,4$

5. [Lecture] $p \wedge (q \wedge r) \vdash q$ Solution:

This sequent is provable.

- 1. $p \wedge (q \wedge r)$ prem.
- 2. $q \wedge r \qquad \wedge e2 \ 1$
- $3. q \wedge e1 2$
- 6. [Lecture] $p \wedge q, \neg q \wedge r \vdash \neg \neg p \wedge \neg \neg r$ Solution:

This sequent is provable.

Solution 1:

- 1. $p \wedge q$ prem.
- 2. $\neg q \wedge r$ prem.
- 3. $p \wedge e1 1$
- 4. $r \wedge e2 2$
- 5. $\neg \neg p$ $\neg \neg i 3$
- 6. $\neg \neg r$ $\neg \neg i \ 4$
- 7. $\neg \neg p \land \neg \neg r \land i 5,6$

Solution 2:

- 1. $p \wedge q$ prem.
- 2. $\neg q \wedge r$ prem.
- 3. $q \wedge e2 1$
- 4. $\neg q$ $\wedge e1 2$
- 5. ⊥ ¬e 3,4
- 6. $\neg \neg p \land \neg \neg r \quad \bot e 5$
- 7. [Lecture] $\neg\neg\neg p \land q, \neg\neg r \vdash r \land \neg p \land \neg\neg q$ Solution:

This sequent is provable.

- $1. \hspace{1cm} \neg\neg\neg p \wedge q \hspace{1cm} \text{prem}.$
- 2. $\neg \neg r$ prem.
- 3. $\neg \neg \neg p$ $\wedge e1 1$
- 4. $q \wedge e2 1$
- 5. $r \neg e 2$
- 6. $\neg p$ $\neg \neg e 3$
- 7. $\neg \neg q$ $\neg \neg i \ 4$
- 8. $r \land \neg p$ $\land i 5,6$
- 9. $r \wedge \neg p \wedge \neg \neg q \quad \wedge i \ 8,7$
- 8. [Lecture] $p \land q, q \rightarrow \neg \neg r \vdash p \land r$ Solution:

This sequent is provable.

1.
$$p \wedge q$$
 prem.

2.
$$q \rightarrow \neg \neg r$$
 prem.

3.
$$q \wedge e2 1$$

4.
$$\neg \neg r \longrightarrow e 2,3$$

5.
$$r \neg e 4$$

6.
$$p \wedge e1 1$$

9. [Lecture] Explain the *implication-elimination* rule (\rightarrow e). Show how the *Modus Tollens* rule derives from the \rightarrow e rule? Solution:

Implication-Elimination Rule: If we know that φ holds and we know that $\varphi \to \psi$, we can conclude that ψ holds.

$$\frac{\varphi \qquad \varphi \to \psi}{\psi} \to e$$

Modus Tollens Rule: If it holds that $\varphi \to \psi$ and $\neg \psi$ are true, then we can conclude $\neg \varphi$.

$$\frac{\varphi \to \psi \qquad \neg \psi}{\neg \varphi} \text{MT}$$

We can now give the proof for Modus Tollens Rule: $\varphi \to \psi, \neg \psi \vdash \neg \varphi$

1.
$$\neg \psi$$
 prem.

2.
$$\varphi \to \psi$$
 prem.

3.
$$\varphi$$
 ass.

4.
$$\psi \longrightarrow e 1,2$$

5.
$$\perp$$
 $\neg e 1,4$

6.
$$\neg \varphi$$
 $\neg i 3-5$

10. [Lecture] $\neg p \rightarrow q, \neg \neg \neg q \wedge r \vdash p \wedge \neg \neg \neg q$ Solution:

This sequent is provable.

1.
$$\neg p \rightarrow q$$
 prem.

2.
$$\neg \neg \neg q \wedge r$$
 prem.

3.
$$\neg \neg \neg q \wedge \text{e1 2}$$

4.
$$\neg q$$
 $\neg \neg e 3$

6.
$$p \land \neg \neg \neg q \land i 5,3$$

11. [Lecture] Translate the following reasoning into a sequent. If the sequent is valid, proof it using the rules of natural deduction. If the sequent is not valid, provide a counter example.

If I press the button, the window opens.

I pressed the button.

Therefore, the window is open.

Solution:

Translation:

p: I press the button.

q: The window is open.

If I press the button, the window opens. $p \rightarrow q$ I pressed the button. p

The window is open.

Sequent: $p \rightarrow q, p \vdash q$

This sequent is provable.

- 1. $p \to q$ prem.
- p prem.
- $3. \quad q \longrightarrow e 1,2$
- 12. [Lecture] Explain the concept of boxes in deduction rules and why they are needed. What does it mean if you make an assumption within a box? Where is this assumption valid? Solution:

Assumptions assume that within the box, a certain formula holds that can be used to prove something within the box. The assumption is only valid within the box. Therefore, any formulas proven within the box are only valid inside the box, because they are proven under a given assumption that is only valid in the scope of the box.

13. [Lecture] $p \to (q \land r), q \to s \vdash p \to (s \land r)$ Solution:

This sequent is provable.

- 1. $p \to (q \land r)$ prem. 2. $q \to s$ prem.
- 3. p ass.
- $4. \qquad q \wedge r \qquad \to e \ 1,3$
- $5. \quad q \qquad \wedge e1 \ 4$ $6. \quad s \qquad \rightarrow e \ 2,5$
- 7. $r \wedge e2 4$
- 8. $s \wedge r \wedge 6,7$
- 9. $p \to (s \land r) \longrightarrow i 3-8$
- 14. [Lecture] Why are there two rules for the \vee -introduction rule. Explain, why you are able to connect any formula to a certain formula φ using the connective \vee . Solution:

prem.

$$\frac{\varphi}{\varphi \vee \psi} \vee i1 \qquad \qquad \frac{\varphi}{\psi \vee \varphi} \vee i2$$

If we know that φ holds, we can derive that $\varphi \lor \psi$ holds and that $\psi \lor \varphi$ holds. This is true for any ψ .

15. [Lecture] $p \land q, r \rightarrow s \vdash (p \lor (r \rightarrow s)) \land (q \lor ((t \lor r) \rightarrow u))$ Solution:

This sequent is provable.

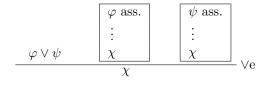

- 1. $p \wedge q$
- 2. $r \to s$ prem.
- 3. $p \wedge e1 1$
- 4. $p \lor (r \to s)$ $\lor i1 3$
- 5. $q \wedge e2 1$
- 6. $q \lor ((t \lor r) \to u)$ \lor i1 5
- 7. $(p \lor (r \to s)) \land (q \lor ((t \lor r) \to u)) \land i 4,6$
- 16. [Lecture] Explain the OR-elimination (\vee -e) rule of the natural deduction calculus. In particular, why does it rule require two boxes? Solution:

From a given formula $\varphi \lor \psi$, we want to proof some other formula χ . We only know that φ or ψ holds. It could be that both of them are true, but it could also be that only ψ is true, or only φ is true. Sine we don't know which sub-formula is true, we have to give two separate proofs:

- First box: We assume φ is true and need to find a proof for χ .
- Second box: We assume ψ is true and need to find a proof for χ .

Only if we can prove χ in the first and in the second box, then we can conclude that χ holds also outside of the box.

The \vee e rules says that we can only derive χ from $\varphi \vee \psi$ if we can derive χ from the assumption φ as well as from the assumption ψ . Formally the rule is written as:

17. [Lecture] $p \vee \neg \neg q, \neg p \wedge \neg q \vdash s \vee \neg t$ Solution:

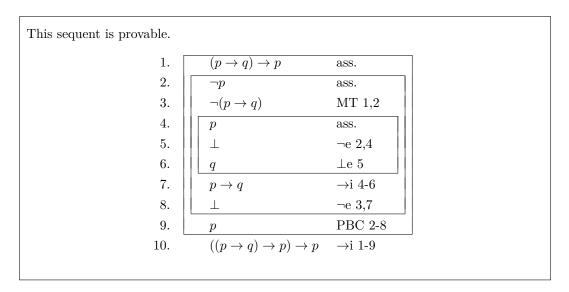

This sequent is provable. 1. $p \vee \neg \neg q$ prem. 2. $\neg p \land \neg q$ prem. 3. pass. 4. $\wedge e1\ 2$ $\neg p$ 5. $\neg e 3,4$ 6. $s \vee \neg t$ 7. ass. 8. $\neg q$ $\wedge e2\ 2$ ¬e 7,8 9. \perp \perp e 9 10. $s \vee \neg t$ \vee e 1, 3-6, 7-10 11. $s \vee \neg t$

18. [Lecture] $\neg q \lor \neg p \vdash \neg (q \land p)$ Solution:

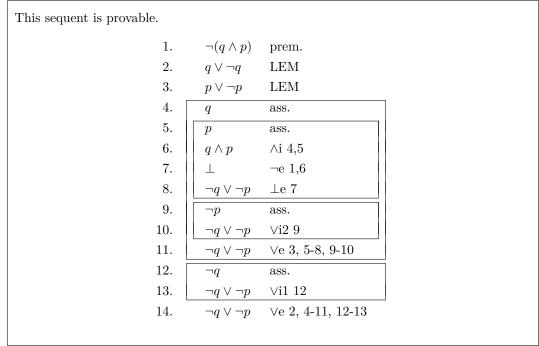

This sequent is provable.

1. $\neg q \vee \neg p$ prem. 2. $q \wedge p$ ass. 3. ass. $\neg q$ 4. $\wedge e1$ 2 q5. \perp $\neg e \ 3,\!4$ 6. $\neg p$ ass. 7. $\wedge e2\ 2$ p8. $\neg e 6,7$ 9. $\vee e 1, 3-5, 6-8$ 10. $\neg i \ 2\text{-}9$ $\neg (q \land p)$

19. [Lecture] \vdash $((p \rightarrow q) \rightarrow p) \rightarrow p$ Solution:

20. [Lecture] $\neg (q \land p) \vdash \neg q \lor \neg p$ Solution:

21. [Lecture] Explain in your own words, how to proof a sequent in the natural deduction calculus. What steps do you need to take and which tips can be helpful when solving such proofs? Solution:

- Start a proof. At the top of your page write the premises, at the bottom write the conclusion.
- Work in both directions to fill the gap. Work from the top to the bottom by working with the premises, and simultaneously work upwards by using the conclusion.
- Look first at the conclusion. If the conclusion is of the form $\varphi \to \psi$, then immediately apply \to i. You still have to fill the gap in the box, but you have an extra assumption to work with and a simpler conclusion you try to reach. Similar, if your conclusion is of the form $\neg \varphi$, apply \neg i to make your life easier.
- Assumption boxes. At any time you can introduce a formula as assumption, by choosing a proof rule that opens the box. The box defines the scope of the assumption. By opening a box you introduce an assumption. But don't forget, you have to close the box precisely as defined by the applied proof rule.
- What rule should you apply? The rules →i and ¬i make your life easier, apply them whenever you can. There is no easy recipe for when to use the other rules. The best way to get the hang of it is doing many proofs by yourself.

2.1.2 Soundness and completeness of natural deduction

- 22. [Lecture] "Natural deduction for propositional logic is *sound* and *complete*." Explain in your own words what this means. Solution:
 - Natural deduction for propositional logic is sound. Therefore, any sequent that can be proven is a correct semantic entailment.

Natural deduction is sound. This means that any sequent $\varphi_1, \varphi_2, \ldots \vdash \psi$ that is provable states a correct semantic entailment $\varphi_1, \varphi_2, \ldots \models \psi$. A correct semantic entailment tells us that under all models that satisfy φ_i for all i the conclusion ψ evaluates to true.

In short: Anything that is provable by natural deduction is true with respect to semantics.

• Natural deduction for propositional logic is complete. Therefore, any sequent that is a correct semantic entailment can be proven.

Natural deduction is complete. This means that for any statement that is true, i.e. the statement is a correct semantic entailment, there exists a proof.

23. [Lecture] How can you show that a sequent is not valid? Is this a consequence of soundness or completeness. Explain your answer. Solution:

In order to show that a sequent is not valid, we provide a *counter example*, which is a model that satisfies all premises but falsifies the conclusion.

This is a consequence of soundness. We know from the definition of soundness that

$$\varphi_1, \varphi_2, ..., \varphi_n \nvDash \psi \qquad \Rightarrow \qquad \varphi_1, \varphi_2, ..., \varphi_n \nvDash \psi$$

A counterexample is enough to tell us that the left-hand side of this implication is true, hence the sequent is not valid.

24. [Lecture] $p \to q, q \to r \vdash r$. Solution:

```
This sequent is not provable. \mathcal{M}: p = F, q = F, r = F \mathcal{M} \models p \to q, q \to r \mathcal{M} \nvDash r
```

25. [Lecture] Translate the following reasoning into a sequent. If the sequent is valid, proof it using the rules of natural deduction. If the sequent is not valid, provide a counter example.

If I press the button, the window opens.

The window is open.

Therefore, I pressed the button.

Solution:

```
Translation: p: Press button. q: Open window. If I press the button, the window opens. p \rightarrow q The window is open. q Therefore, I pressed the button. \vdash p sequent: p \rightarrow q, q \vdash p

This sequent is not provable. \mathcal{M}: p = F, q = T
\mathcal{M} \models p \rightarrow q, q
\mathcal{M} \nvDash p
```

2.2 Practicals

For each of the following sequents, either provide a natural deduction proof, or a counter-example that proves the sequent invalid.

For proofs, clearly indicate which rule, and what assumptions/premises/intermediate results you are using in each step. Also clearly indicate the scope of any boxes you use.

For counterexamples, give a complete model. Show that the model satisfies the premise(s) of the sequent in question, but does not satisfy the respective conclusion. For each of the following sequents, either provide a natural deduction proof, or a counter-example that proves the sequent invalid.

1. [Practicals] [2 Points]

- (a) If I am ill, I go to the doctor.I am ill.Therefore, I go to the doctor.
- (b) If I am ill, I go to the doctor. I go to the doctor. Therefore, I am ill.

(c) (Solve without using the Modus Tollens)
If I am ill, I go to the doctor.
I did not go to the doctor.
Therefore, I am not ill.

Solution:

There is no solution available for this question yet.

2. [Practicals] [2 Points]

- (a) $(p \wedge q) \wedge \neg r \vdash q \vee r$
- (b) $(p \lor q) \land \neg r \vdash q \land r$

Solution:

There is no solution available for this question yet.

3. [Practicals] [2 Points]

- (a) $\vdash (p \rightarrow q) \rightarrow p$
- (b) $\vdash p \rightarrow (q \rightarrow p)$

Solution:

There is no solution available for this question yet.

4. [Practicals] [2 Points] $\neg (a \land b) \lor \neg c \vdash \neg (a \land b) \to c \lor a$ Solution:

There is no solution available for this question yet.

5. [Practicals] [2 Points] $p \land q \lor r \vdash (p \lor r) \land (q \lor r)$ Solution:

There is no solution available for this question yet.

6. [Practicals] [2 Points] $\neg \neg x \rightarrow \neg y \land z \vdash z \rightarrow \neg x \land \neg \neg y$ Solution:

There is no solution available for this question yet.

7. [Practicals] [2 Points] $\vdash \neg (p \land q) \lor p$ Solution:

There is no solution available for this question yet.

8. [Practicals] [2 Points] $\neg (a \lor b) \vdash \neg a \land \neg b$ Solution:

There is no solution available for this question yet.

9. [Practicals] [2 Points] $(s \vee \neg u) \to t \vdash (\neg s \wedge u) \vee t$ Solution:

10. [Practicals] [2 Points] $\neg \neg k \rightarrow (l \lor m), \neg \neg \neg l \rightarrow m \vdash \neg k \lor (l \lor \neg \neg m)$ Solution:

There is no solution available for this question yet.

2.3 Self Evaluation

For each of the following sequents, either provide a natural deduction proof, or a counter-example that proves the sequent invalid.

For proofs, clearly indicate which rule, and what assumptions/premises/ intermediate results you are using in each step. Also clearly indicate the scope of any boxes you use.

For counterexamples, give a complete model. Show that the model satisfies the premise(s) of the sequent in question, but does not satisfy the respective conclusion.

2.3.1 Rules for natural deduction

25. [Self-Assessment] $p \land (q \land r) \vdash (p \land q) \land r$ Solution:

There is no solution available for this question yet.

26. [Self-Assessment] $\neg \neg p \land \neg \neg q, r \land s \vdash (p \land r) \land \neg \neg s$ Solution:

There is no solution available for this question yet.

27. [Self-Assessment] $(p \to q) \land (q \to r), p \vdash \neg \neg r \land \neg p$ Solution:

There is no solution available for this question yet.

28. [Self-Assessment] $(\neg p \rightarrow q) \land (q \rightarrow r), \neg r \vdash \neg \neg \neg r \land \neg p$ Solution:

There is no solution available for this question yet.

29. [Self-Assessment] Explain the implication-introduction rule $(\rightarrow i)$. Solution:

There is no solution available for this question yet.

30. [Self-Assessment] $(p \to q) \to r \vdash \neg r \land \neg s \to \neg (p \to q)$ Solution:

There is no solution available for this question yet.

31. [Self-Assessment] $p \to q \vdash (r \to p) \to (r \to q)$ Solution:

There is no solution available for this question yet.

32. [Self-Assessment] $p \to q, p \land (r \lor q) \vdash (q \to p) \to ((s \land t) \lor q) \land (r \lor q)$ Solution:

33.	[Self-Assessment] $p \lor q, \neg p \lor r \vdash q \lor r$ Solution:
	There is no solution available for this question yet.
34.	[Self-Assessment] $p \to q, p \land r \lor q \vdash (q \to p) \to ((s \land t) \lor q) \land (r \lor q)$ Solution:
	There is no solution available for this question yet.
35.	[Self-Assessment] $p \lor q, p \to r, \neg s \to \neg q \vdash r \lor s$ Solution:
	There is no solution available for this question yet.
36.	[Self-Assessment] Look at the following statements and tick them if they are true.
	\square Given two premises φ and ψ , we can conclude that $\varphi \wedge \psi$ holds using \wedge -introduction. \square Given two premises φ and ψ , we can conclude that $\varphi \vee \psi$ holds using \vee -introduction. \square Given a premise $\varphi \wedge \psi$, we can conclude φ with \wedge -elimination. \square Given a premise $\varphi \vee \psi$, we can conclude φ with \vee -elimination.
37.	[Self-Assessment] $\vdash p \to (q \to p)$ Solution:
	There is no solution available for this question yet.
38.	[Self-Assessment] Translate the following reasoning into a sequent. If the sequent is valid proof it using the rules of natural deduction. If the sequent is not valid, provide a counter example. If I press the button, the window opens. The window is not open. Therefore, I didn't press the button.
	Solution:
	There is no solution available for this question yet.
39.	[Self-Assessment] Explain the \perp -elimination rule of the natural deduction calculus. Why can you deduce a formula φ from something, that is wrong? Solution:
	There is no solution available for this question yet.
40.	[Self-Assessment] $\neg q \lor p \vdash q \to (p \lor r)$ Solution:
	There is no solution available for this question yet.
41.	[Self-Assessment] $p \to (q \lor r), \neg q \land \neg r \vdash \neg p$ Solution:
	There is no solution available for this question yet.
42.	[Self-Assessment] Derive the $Proof$ - By - $Contradiction$ -rule from the \neg - $introduction$ rule. Solution:
	There is no solution available for this question yet.

43.	[Self-Assessment] $\neg (q \lor p) \vdash \neg q \land p$ Solution:
	There is no solution available for this question yet.
44.	[Self-Assessment] $\vdash (p \to q) \lor (q \to r)$ Solution:
	There is no solution available for this question yet.
45.	[Self-Assessment] $(p \to q) \land (q \to p) \vdash (p \land q) \lor (\neg p \land \neg q)$ Solution:
	There is no solution available for this question yet.
46.	[Self-Assessment] Look at the following statements and tick them if they are true.
	\Box A sequent always has to have at least one premise to be formally correct.
	\square When proving a sequent you start your proof with the premise(s) and end it with the conclusion.
	\square A natural deduction proof can theoretically have infinite assumption boxes in it.
	$\hfill \square$ A natural deduction rule can only be applied on the bottom-level connective of a formula.
	2.3.2 Soundness and completeness of natural deduction
47.	[Self-Assessment] Explain what it means that natural deduction for propositional logic is $sound$. What is the difference to $completeness$?
	Solution:
	There is no solution available for this question yet.
48.	[Self-Assessment] Explain what it means that natural deduction for propositional logic is sound. What is the difference to completeness? Solution:
	There is no solution available for this question yet.
49.	[Self-Assessment] Look at the following statements and tick them if they are true.
	$\hfill\square$ Any sequent that is a correct semantic entailment can be proven.
	\square Any sequent that can be proven is a correct semantic entailment.
	\Box If a sequent is not provable, the semantic entailment relation does hold.
	\Box If for a sequent the semantic entailment relation does not hold, it cannot be proven with natural deduction.
50.	[Self-Assessment] Natural deduction for propositional logic is sound and complete. In the following list, mark each statement with either \mathbf{S} , \mathbf{C} , \mathbf{B} , or \mathbf{N} , depending on whether the corresponding statement follows from Soundness, Completeness, Both, or Neither. (Note: If a statement is in itself factually wrong, or has nothing to do with soundness and completeness, mark it \mathbf{N} , since it follows from neither soundness nor completeness.)
	☐ There is no correct sequent for which there is no proof.☐ Every sequent has a proof.

	☐ If all models that satisfy the premise(s) of a given sequent also satisfy the conclusion of the sequent, there exists a proof for the sequent.
	☐ A sequent has a proof if and only if it is semantically correct.
	☐ An incorrect sequent does not have a proof.
	Every propositional formula is either valid or not valid.
	☐ If a model satisfies the premise(s) of a given sequent, but does not satisfy the conclusion of the sequent, it is not possible to construct a proof for the sequent.
51.	[Self-Assessment] Natural deduction for propositional logic is sound and complete. In the following list, mark each statement with either $\mathbf{S}, \mathbf{C}, \mathbf{B},$ or \mathbf{N} , depending on whether the corresponding statement follows from Soundness, Completeness, Both, or Neither. (Note: If a statement is in itself factually wrong, or has nothing to do with soundness and completeness, mark it \mathbf{N} , since it follows from neither soundness nor completeness.)
	☐ A sequent has a proof if and only if it is semantically correct.

	☐ Every propositional formula is either valid or not valid.
	☐ If all models that satisfy the premise(s) of a given sequent also satisfy the conclusion of the sequent, there exists a proof for the sequent.
52.	[Self-Assessment] Given an invalid sequent, how do you prove its invalidity? Solution:
	There is no solution available for this question yet.
53.	[Self-Assessment] $\neg (p \lor \neg q) \vdash p$ Solution:
	There is no solution available for this question yet.
54.	[Self-Assessment] $p \to q \vdash ((p \lor q) \to p) \land (p \to (p \lor q))$ Solution:
	There is no solution available for this question yet.
55.	[Self-Assessment] $p \lor q, \neg q \lor r \vdash r$ Solution:
	There is no solution available for this question yet.
56.	[Self-Assessment] $(p \land q) \rightarrow (\neg r \land \neg s), \neg r \land \neg s \vdash p$ Solution:
	There is no solution available for this question yet.

3 Combinational Equivalence Checking

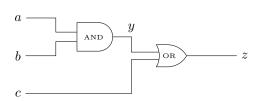

3.1 Lecture

3.1.1 Translating a Circuit into a Formula

1. [Lecture] Explain the algorithm of how to decide the equivalence of combinational circuits via the reduction to satisfiability. Solution:

Let C_1 and C_2 denote the two combinational circuits. In order to check whether C_1 and C_2 are equivalent, one has to perform the following steps:

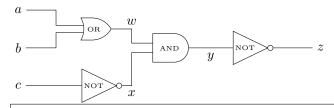

- (a) Encode C_1 and C_2 into two propositional formulas φ_1 and φ_2 .
- (b) Compute the Conjunctive Normal Form (CNF) of $\varphi_1 \oplus \varphi_2$, using Tseitin encoding; i.e., $CNF(\varphi_1 \oplus \varphi_2)$.
- (c) Give the formula $CNF(\varphi_1 \oplus \varphi_2)$ to a SAT solver and check for satisfiability.
- (d) C_1 and C_2 are equivalent if and only if $CNF(\varphi_1 \oplus \varphi_2)$ is UNSAT.
- 2. [Lecture] Explain the process of translating a combinational circuit into a propositional formula. Draw a combinational circuit with 2 or 3 gates and give the corresponding propositional formula. Solution:

The inputs are denoted by a, b, and c and the output is denoted by z. We assign temporary variable names to the inner wires; in this case we use y. Using these variables, we can create the propositional formula over the inputs and the output.

$$z = y \lor c$$
$$= (a \land b) \lor c$$

3. [Lecture] Compute the propositional formula of the following circuit.

Solution:

$$\begin{split} z &= \neg y \\ &= \neg (w \wedge x) \\ &= \neg ((a \vee b) \wedge x) \\ &= \neg ((a \vee b) \wedge \neg c) \end{split}$$

3.1.2 Relations between Satisfiability, Validity, Equivalence and Semantic Entailment

4. [Lecture] Explain the duality of *satisfiability* and *validity* and additional provide examples that show the duality. Solution:

A formula φ is valid, if and only if, $\neg \varphi$ is not satisfiable.

Consider the formula $\varphi = (x \vee \neg x)$. This formula is valid, i.e., all rows in the truth table would evaluate to *true*. The negation of φ is the following: $\neg \varphi = \neg (x \vee \neg x) = \neg x \wedge x$, which is not satisfiable, i.e., all rows the truth table would evaluate to *false*.

A formula φ is satisfiable, if and only if, $\neg \varphi$ is not valid.

If φ is satisfiable, there is at least one model that makes the formula true. If we negate the formula, these models make the negated formula false, and therefore, the negated formula cannot be valid. Consider the formula $\varphi = (x \vee y)$. There is at least one model that makes the formula true, e.g. $\mathcal{M} := x = T, \ y = T$. The negation of φ is the following: $\neg \varphi = \neg (x \vee y) = \neg x \wedge \neg y$. Under the same model \mathcal{M} as before, $\neg \varphi$ evaluates to false. So the negated formula is not valid.

- 5. [Lecture] How can you check whether it is true that $\varphi \models \psi$ using a decision procedure for (a) satisfiability or (b) validity? Solution:
 - (a) **Decide entailment using satisfiability.** The question whether $\varphi \models \psi$ can be decided by checking $\varphi \land \neg \psi$ not satisfiable.
 - (b) **Decide entailment using validity.** The question whether $\varphi \vDash \psi$ can be decided by checking $\varphi \to \psi$ is valid.

3.1.3 Normal Forms

6. [Lecture] Explain the following terms and give examples: (a) literal, (b) cube, and (c) clause. Solution:

Let φ be a propositional formula defined over Boolean variables $x_1, ..., x_n$.

- A literal is one of the variables x_i or the negation of a variable, e.g., x_1 .
- A clause is a disjunction of literals, e.g., $x_1 \vee x_2$.
- A *cube* is a conjunction of literals, e.g., $x_1 \wedge x_2$.
- 7. [Lecture] Given the formula $\varphi = (q \to p) \land (r \lor \neg p)$. Compute its representation in Disjunctive Normal Form (DNF) using a truth table.

Solution:

p	q	r	$\neg p$	$r \vee \neg p$	$q \rightarrow p$	φ
F	F	F	T	\mathbf{T}	\mathbf{T}	\mathbf{T}
\mathbf{F}	F	Т	T	\mathbf{T}	\mathbf{T}	T
\mathbf{F}	\mathbf{T}	F	T	\mathbf{T}	F	F
\mathbf{F}	\mathbf{T}	Т	T	\mathbf{T}	F	F
\mathbf{T}	F	F	F	F	\mathbf{T}	F
\mathbf{T}	F	T	F	\mathbf{T}	\mathbf{T}	T
\mathbf{T}	\mathbf{T}	F	F	F	\mathbf{T}	F
\mathbf{T}	\mathbf{T}	\mathbf{T}	F	\mathbf{T}	\mathbf{T}	T

$$\begin{split} DNF(\varphi) = & (\neg p \wedge \neg q \wedge \neg r) \\ & \vee (\neg p \wedge \neg q \wedge r) \\ & \vee (p \wedge \neg q \wedge r) \\ & \vee (p \wedge q \wedge r) \end{split}$$

8. [Lecture] Given the formula $\varphi = (q \to p) \land (r \lor \neg p)$. Compute its representation in Conjunctive Normal Form (CNF) using a truth table. Solution:

p	q	r	$\neg p$	$r \vee \neg p$	$q \rightarrow p$	φ
\mathbf{F}	\mathbf{F}	\mathbf{F}	T	\mathbf{T}	\mathbf{T}	T
\mathbf{F}	F	Т	T	\mathbf{T}	\mathbf{T}	\mathbf{T}
\mathbf{F}	\mathbf{T}	F	T	\mathbf{T}	F	F
\mathbf{F}	\mathbf{T}	T	T	\mathbf{T}	F	F
\mathbf{T}	F	F	F	F	\mathbf{T}	F
\mathbf{T}	F	T	F	\mathbf{T}	\mathbf{T}	\mathbf{T}
\mathbf{T}	\mathbf{T}	F	F	F	\mathbf{T}	F
\mathbf{T}	\mathbf{T}	\mathbf{T}	F	\mathbf{T}	${f T}$	T

$$\begin{aligned} CNF(\varphi) = & (p \vee \neg q \vee r) \\ \wedge & (p \vee \neg q \vee \neg r) \\ \wedge & (\neg p \vee q \vee r) \\ \wedge & (\neg p \vee \neg q \vee r) \end{aligned}$$

3.1.4 Tseitin Encoding

We list the *Tseitin-rewriting rules* to be applied for the following examples.

$$\chi \leftrightarrow (\varphi \lor \psi) \quad \Leftrightarrow \quad (\neg \varphi \lor \chi) \land (\neg \psi \lor \chi) \land (\neg \chi \lor \varphi \lor \psi) \tag{1}$$

$$\chi \leftrightarrow (\varphi \land \psi) \quad \Leftrightarrow \quad (\neg \chi \lor \varphi) \land (\neg \chi \lor \psi) \land (\neg \varphi \lor \neg \psi \lor \chi) \tag{2}$$

$$\chi \leftrightarrow \neg \varphi \quad \Leftrightarrow \quad (\neg \chi \vee \neg \varphi) \wedge (\varphi \vee \chi) \tag{3}$$

9. [Lecture] What is the advantage of applying *Tseitin encoding* to obtain a CNF, especially compared to using truth tables? Solution:

Given an original formula φ . The equisatisfiable formula in CNF after Tseitin encoding – $CNF(\varphi)$ – is linear in the size of φ , since the number of variables and clauses introduced by Tseitin encoding is linear in the size of φ . Using a truth table could result in an exponential blowup when constructing a CNF.

10. [Lecture] Derive a Rewrite-Rule for an implication node, i.e., what clauses are introduced by the node $x \leftrightarrow (p \rightarrow q)$? Solution:

$$x \leftrightarrow (p \to q) \Leftrightarrow x \leftrightarrow (p \to q)$$

$$\Leftrightarrow (x \to (p \to q)) \land ((p \to q) \to x)$$

$$\Leftrightarrow (x \to (\neg p \lor q)) \land ((\neg p \lor q) \to x)$$

$$\Leftrightarrow (\neg x \lor (\neg p \lor q)) \land (\neg (\neg p \lor q) \lor x)$$

$$\Leftrightarrow (\neg x \lor \neg p \lor q) \land ((\neg \neg p \land \neg q) \lor x)$$

$$\Leftrightarrow (\neg x \lor \neg p \lor q) \land ((p \land \neg q) \lor x)$$

$$\Leftrightarrow (\neg x \lor \neg p \lor q) \land ((p \lor x) \land (\neg q \lor x))$$

$$\Leftrightarrow (\neg x \lor \neg p \lor q) \land (p \lor x) \land (\neg q \lor x)$$

11. [Lecture] Explain the concept of equisatisfiability. Given a propositional logic formula φ , the Tseitin algorithm computes an equisatisfiable formula $CNF(\varphi)$ in CNF. Why is this enough for equivalence checking? Solution:

Two propositional formulas φ and ψ are equisatisfiable if and only if either both are satisfiable or both are unsatisfiable.

When checking whether two formulas φ_1 and φ_2 are equivalent we check whether $\varphi = \varphi_1 \oplus \varphi_2$ is satisfiable. If φ is SAT we know that there is a model such that one of the input formulas evaluated to true, while the other evaluated to false. The equisatisfiable formula $CNF(\varphi)$ is satisfiable if and only if φ is satisfiable and therefore answers our question of whether the two input formulas are equivalent.

12. [Lecture] Apply Tseitin's encoding to the following formula: $\varphi = \neg(a \lor \neg b) \lor (\neg a \land c)$. For each variable you introduce, clearly indicate which subformula of φ it represents. Solution:

$$CNF(\varphi) = x_{\varphi} \land$$

$$(\neg x_{\varphi} \lor x_{1}) \land (\neg x_{\varphi} \lor x_{2}) \land (\neg x_{1} \lor \neg x_{2} \lor x_{\varphi}) \land$$

$$(\neg x_{1} \lor \neg x_{3}) \land (x_{1} \lor x_{3}) \land$$

$$(\neg x_{2} \lor x_{5}) \land (\neg x_{2} \lor c) \land (\neg x_{5} \lor \neg c \lor x_{2}) \land$$

$$(\neg x_{4} \lor \neg b) \land (x_{4} \lor b) \land$$

$$(\neg x_{5} \lor \neg a) \land (x_{5} \lor a)$$

3.1.5 CEC Example

13. [Lecture] Check whether $\varphi_1 = a \land \neg b$ and $\varphi_2 = \neg(\neg a \lor b)$ are semantically equivalent using the reduction to satisfiability. Prepare everything until you have a formula $\mathrm{CNF}(\varphi)$, that you can give to a SAT solver. Solution:

• We start by construction φ :

$$\varphi = \varphi_1 \oplus \varphi_2$$

$$= [\varphi_1 \vee \varphi_2] \wedge \neg [\varphi_1 \wedge \varphi_2] =$$

$$= [(a \wedge \neg b) \vee (\neg (\neg a \vee b))] \wedge \neg [(a \wedge \neg b) \wedge (\neg (\neg a \vee b))]$$

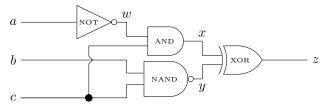

$$\begin{bmatrix}
\left(a \land \neg b\right) \lor \left(\neg \left(\neg a \lor b\right)\right) \\
x_{10} \\
x_{4} \\
x_{8} \\
x_{5}
\end{bmatrix} \land \neg \begin{bmatrix}
\left(a \land \neg b\right) \lor \left(\neg \left(\neg a \lor b\right)\right) \\
x_{12} \\
x_{6} \\
x_{7} \\
x_{7} \\
x_{7} \\
x_{2} \\
x_{9} \\
x_{2}
\end{bmatrix}$$

$$CNF(\varphi) = x_{\varphi} \land \\ (\neg x_{\varphi} \lor x_{1}) \land (\neg x_{\varphi} \lor x_{2}) \land (\neg x_{1} \lor \neg x_{2} \lor x_{\varphi}) \land \\ (\neg x_{2} \lor \neg x_{3}) \land (x_{2} \lor x_{3}) \land \\ (\neg x_{4} \lor x_{1}) \land (\neg x_{5} \lor x_{1}) \land (\neg x_{1} \lor x_{4} \lor x_{5}) \land \\ (\neg x_{6} \lor x_{3}) \land (\neg x_{7} \lor x_{3}) \land (\neg x_{3} \lor x_{6} \lor x_{7}) \land \\ (\neg x_{4} \lor a) \land (\neg x_{4} \lor x_{10}) \land (\neg a \lor \neg x_{10} \lor x_{4}) \land \\ (\neg x_{5} \lor \neg x_{8}) \land (x_{5} \lor x_{8}) \land \\ (\neg x_{6} \lor a) \land (\neg x_{6} \lor x_{12}) \land (\neg a \lor \neg x_{12} \lor x_{6}) \land \\ (\neg x_{7} \lor \neg x_{9}) \land (x_{7} \lor x_{9}) \land \\ (\neg x_{11} \lor x_{8}) \land (\neg b \lor x_{8}) \land (\neg x_{8} \lor x_{11} \lor b) \land \\ (\neg x_{13} \lor x_{9}) \land (\neg b \lor x_{9}) \land (\neg x_{9} \lor x_{13} \lor b) \land \\ (\neg x_{10} \lor \neg b) \land (x_{10} \lor b) \land \\ (\neg x_{11} \lor \neg a) \land (x_{11} \lor a) \land \\ (\neg x_{12} \lor \neg b) \land (x_{12} \lor b) \land \\ (\neg x_{13} \lor \neg a) \land (x_{13} \lor a)$$

3.2 Self-Assessment

3.2.1 Translating a Circuit into a Formula

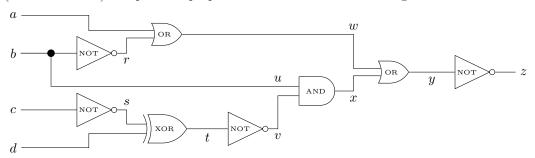

14. [Self-Assessment] Compute the propositional formula of the following circuit.

Solution:

There is no solution available for this question yet.

15. [Self-Assessment] Compute the propositional formula of the following circuit.

Solution:

There is no solution available for this question yet.

3.2.2 Relations between Satisfiability, Validity, Equivalence and Entailment

16. [Self-Assessment] A formula φ is valid, if and only if $\neg \varphi$ is not satisfiable. Explain why this statement holds in your own words. Solution:

There is no solution available for this question yet.

17. [Self-Assessment] Given two propositional logic formulas φ and ψ . How can we check whether $\varphi \equiv \psi$ using a decision procedure for (a) satisfiability, (b) for validity, and (c) for semantic entailment?

Solution:

There is no solution available for this question yet.

18. [Self-Assessment] Given a propositional logic formula φ . How can we check whether φ is *valid* using a decision procedure for (a) satisfiability and (b) equivalence? Solution:

- 19. [Self-Assessment] Given a propositional logic formula φ . Tick all statements that are true.
 - \square A formula φ is *valid*, if and only if $\neg \varphi$ is *satisfiable*.
 - \square A formula ψ is *satisfiable*, if and only if $\neg \varphi$ is *valid*.
 - \square A formula φ is *satisfiable*, if and only if $\neg \varphi$ is *not valid*.
 - \square A formula φ is valid, if and only if $\neg \varphi$ is not satisfiable.
- 20. [Self-Assessment] Given two propositional logic formulas φ and ψ . Tick all statements that are true.
 - \square If $\neg \varphi$ is not satisfiable, φ is not valid.
 - \square If $\top \models \varphi, \varphi$ is valid.
 - $\hfill\Box$ If $\varphi \leftrightarrow \psi$ is valid, φ entails $\psi.$

	\Box If $\varphi \to \psi$ is valid, both formulas are equivalent.
21.	[Self-Assessment] Given two propositional logic formulas φ and ψ . Tick all statements that are true.
	\Box If $\varphi \land \neg \psi$ is not satisfiable, φ entails ψ .
	\Box If $\neg \varphi$ is not valid, φ is satisfiable.
	\square If φ entails ψ and ψ entails φ , both formulas are equivalent.
	\Box If φ is equivalent to \top,φ is valid
	Solution:
	There is no solution available for this question yet.
	3.2.3 Normal Forms
22.	[Self-Assessment] Define the $Disjunctive\ Normal\ Form\ (DNF)$ of formulas in propositional logic. Use the proper terminology and give an example. Solution:
	There is no solution available for this question yet.
23.	[Self-Assessment] Define the <i>Conjunctive Normal Form (CNF)</i> of formulas in propositional logic. Use the proper terminology and give an example. Solution:
	There is no solution available for this question yet.
24.	[Self-Assessment] Tick all statements that are true.
	\square A <i>clause</i> is a disjunction of literals.
	\square A <i>clause</i> is a conjunction of literals.
	\square A <i>cube</i> is disjunction of literals.
	\square A <i>cube</i> is a conjunction of literals.
25.	[Self-Assessment] Given the formula φ with the variables $x_1,,x_n$. Tick all statements that are true.
	\square A <i>literal</i> is a variables x_i or its negation.
	\square A <i>literal</i> forms a formula in conjunctive normal form.
	\square A <i>literal</i> forms a formula in disjunctive normal form.
	\square A <i>literal</i> is called <i>positive</i> , if it is the negation of a variable.
	\square A <i>literal</i> is called <i>negative</i> , if it is the negation of a variable.
26.	[Self-Assessment] Look a the following statements and tick all items that conform to a DNF .
	$\Box \ a \lor b$
	□ A DNF is a conjunction of clauses.
	$\Box (a \lor b) \land (\neg b \lor \neg a \lor c) \land \neg c$
	$\Box (a \wedge b) \vee (\neg b \wedge \neg a \wedge c) \vee \neg c$
	\square A DNF is a conjunction of disjunctions of literals.

	\Box b
	$\Box \ a \wedge b \wedge \neg c$
	$\Box \ (\neg a \wedge b) \wedge (\neg a \wedge c)$
	\square A DNF is a disjunction of cubes.
	$\Box \neg (a \land \neg b) \land c$
	\square A DNF is a disjunction of conjunctions of literals.
	$\Box \ a \wedge \neg b$
27.	[Self-Assessment] Tick each correct ending of the following sentence. "A $Conjunctive\ Normal Form$ is
	\square a conjunction of disjunctions of literals."
	□a conjunction of clauses."
	□a formula that consists only of logical AND operations on sub-formulas which only consist of OR operations on just variables and negations of variables."
28.	[Self-Assessment] SAT solvers usually require input formulas to be in <i>Conjunctive Normal Form</i> (CNF). In the following list, tick all items that conform to CNF.
	\square A formula φ that consists of a conjunction of clauses c_1, c_2, \ldots, c_n .
	\square A formula φ that consists of a disjunction of clauses c_1, c_2, \ldots, c_n .
	\square A formula φ that consists of a conjunction of cubes c_1, c_2, \ldots, c_n .
	\square A formula φ that consists of a disjunction of cubes c_1, c_2, \ldots, c_n .
	\Box A literal l .
29.	[Self-Assessment] In the following list, tick all items that conform to the Conjunctive Normal Form (CNF).
	$\Box (a \land b \land \neg c) \lor (\neg b \land \neg c) \lor (e \land \neg f)$
	$\Box a$
	$\Box \ \lnot b$
	$\ \ \Box \ \ a \wedge eg b$
	$\Box \ a \lor \neg b$
	$\Box \ a \lor (\neg b \land c)$
	$\Box \ (a \lor \neg b) \land c$
	$\Box \neg (p \lor q)$
	$\Box x \vee \neg y \vee z$
30.	[Self-Assessment] In the following list, tick all items that conform to the Disjunctive Normal Form (DNF).
	$\Box (a \land b \land \neg c) \lor (\neg b \land \neg c) \lor (e \land \neg f)$
	$\Box (a \lor b \lor \neg c) \land (\neg b \lor \neg c) \land (e \lor \neg f)$
	$\Box \neg b$
	$\Box \neg b$
	$\Box a \lor \neg b$
	$\Box \ a \lor (\neg b \land c)$
	$\Box \ (a \lor \neg b) \land c$

$\neg(p \lor q)$
$x \vee \neg y \vee z$

Solution:

There is no solution available for this question yet.

31. [Self-Assessment] Given a formula in propositional logic. Explain how to extract a CNF representation as well as a DNF representation of φ using the truth table from φ . Solution:

There is no solution available for this question yet.

32. [Self-Assessment] Given the formula $\varphi = (a \land \neg b \land \neg c) \lor ((\neg c \to a) \to b)$. Use the truth table of φ to compute its representation in (a) CNF and (b) DNF. Solution:

There is no solution available for this question yet.

33. [Self-Assessment] Given the formula $\varphi = (q \to \neg r) \land \neg (p \lor q \lor \neg r)$. Use the truth table of φ to compute its representation in (a) CNF and (b) DNF. Solution:

There is no solution available for this question yet.

34. [Self-Assessment] Consider the propositional formula $\varphi = (p \vee \neg q) \to (\neg p \wedge \neg r)$. Fill out the truth table for φ and its subformulas. Compute a CNF as well as a DNF for φ from the truth table.

p	q	r	$\neg q$	$p \vee \neg q$	$\neg p$	$\neg r$	$\neg p \land \neg r$	$\varphi = (p \vee \neg q) \to (\neg p \wedge \neg r)$

3.2.4 Tseitin Encoding

Consider the following logic equivalences when applying Tseitin's encoding:

$$\chi \leftrightarrow (\varphi \lor \psi) \quad \Leftrightarrow \quad (\neg \varphi \lor \chi) \land (\neg \psi \lor \chi) \land (\neg \chi \lor \varphi \lor \psi) \tag{4}$$

$$\chi \leftrightarrow (\varphi \land \psi) \quad \Leftrightarrow \quad (\neg \chi \lor \varphi) \land (\neg \chi \lor \psi) \land (\neg \varphi \lor \neg \psi \lor \chi)
\chi \leftrightarrow \neg \varphi \quad \Leftrightarrow \quad (\neg \chi \lor \neg \varphi) \land (\varphi \lor \chi)$$
(5)

$$\chi \leftrightarrow \neg \varphi \quad \Leftrightarrow \quad (\neg \chi \lor \neg \varphi) \land (\varphi \lor \chi) \tag{6}$$

37. [Self-Assessment] (a) What does it mean that two formulas φ and ψ are equisatisfiable? (b) Explain the difference between satisfiability and equisatisfiability. Solution:

There is no solution available for this question yet.

38. [Self-Assessment] Suppose you have a propositional formula φ . Let ψ be the result of applying Tseitin's encoding to φ . Is φ equivalent to ψ ? Provide a reason for your answer and explain the relation between φ and ψ .

Solution:

There is no solution available for this question yet.

39. [Self-Assessment] Explain the concept of Tseitin's Encoding to obtain formulas in CNF. Give step-by-step instructions of how to apply Tseitin's encoding to a propositional formula. (Note: Focus on the concept. You do *not* need to quote the rewrite rules!) Solution:

There is no solution available for this question yet.

40. [Self-Assessment] Derive a Rewrite-Rule for a NAND node, i.e., what clauses are introduced by the node $x \leftrightarrow (p \text{ NAND } q)$? Solution:

There is no solution available for this question yet.

41. [Self-Assessment] Derive a Rewrite-Rule for a NOR node, i.e., what clauses are introduced by the node $x \leftrightarrow (p \text{ NOR } q)$? Solution:

There is no solution available for this question yet.

42. [Self-Assessment] Derive a Rewrite-Rule for a XOR node, i.e., what clauses are introduced by the node $x \leftrightarrow (p \oplus q)$? Solution:

There is no solution available for this question yet.

43. [Self-Assessment] Apply Tseitin's encoding to the following formula:

$$\varphi = \neg(\neg b \wedge \neg c) \vee (\neg c \wedge a).$$

For each variable you introduce, clearly indicate which subformula of φ it represents. Solution:

There is no solution available for this question yet.

44. [Self-Assessment] Apply Tseitin's encoding to the following formula:

$$\varphi = (q \land \neg r) \lor \neg (q \land \neg r)$$

. For each variable you introduce, clearly indicate which subformula of φ it represents. Solution:

There is no solution available for this question yet.

45. [Self-Assessment] Apply Tseitin's encoding to the following formula:

$$\varphi = (\neg(\neg a \land b) \land \neg c).$$

For each variable you introduce, clearly indicate which subformula of φ it represents. Solution:

There is no solution available for this question yet.

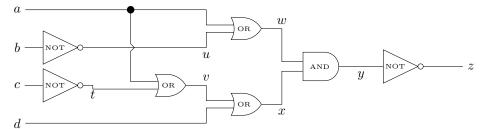

46. [Self-Assessment] Apply Tseitin's encoding to the following formula:

$$\varphi = (p \vee \neg q) \vee (\neg p \wedge \neg r).$$

For each variable you introduce, clearly indicate which subformula of φ it represents. Solution:

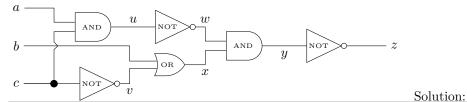

There is no solution available for this question yet.

47. [Self-Assessment] Compute the propositional formula of the following circuit and transform it into an equisatisfiable formula in CNF by applying Tseitin's encoding. For each variable you introduce, clearly indicate which subformula of φ it represents.

Solution:

48. [Self-Assessment] Compute the propositional formula of the following circuit and transform it into an equisatisfiable formula in CNF by applying Tseitin's encoding. For each variable you introduce, clearly indicate which subformula of φ it represents.

There is no solution available for this question yet.

3.2.5 CEC Example

49. [Self-Assessment] Check whether $\varphi_1 = (a \wedge b) \vee \neg c$ and $\varphi_2 = (a \vee \neg c) \wedge (b \vee \neg c)$ are semantically equivalent using the reduction to satisfiability. Prepare everything until you have a formula $\text{CNF}(\varphi)$, that you can give to a SAT solver. Solution:

4 SAT Solvers

4.1 Lecture

4.1.1 The DPLL-Algorithm

1. [Lecture] Use the DPLL algorithm (without BCP, PL and clause learning) to determine whether or not the set of clauses given is satisfiable. Decide variables in alphabetical order starting with the positive phase. If the set of clauses resulted in SAT, give a satisfying model.

Clause 1: $(\neg a \lor b)$

Clause 2: $(\neg b \lor c)$

Clause 3: $(\neg c \lor d)$

Clause 4: $(\neg d \lor e)$

Clause 5: $(\neg e \lor \neg a)$

Solution:

Step	1	2	3	4	5	6	7	8	9	10
Decision Level	0	1	2	3	4	5	5	4	3	2
Assignment	-	a	a, b	a, b, c	a, b, c, d	a,b,c,d,e	$a, b, c, d, \neg e$	$a, b, c, \neg d$	$a, b, \neg c$	a, -

Decision	b		c	\overline{d}	e	SAT				

2. [Lecture] In the context of the DPLL algorithm, explain what a ${\it Unit~Clause}$ is. Give an example. Solution:

4 SAT SOLVERS 4.1 Lecture

Definition - Unit Clause. A clause c is said to be a unit clause under some assignment A if the following two conditions hold:

- (a) The clause c is not satisfied by A.
- (b) All but one of the variables in c are given a value by A.

Therefore, there is a single literal left in the set representing the clause under the assign-

An example would be:

- $c = \neg a, b, c$
- $A = \{ \neg a, c \}$
- 3. [Lecture] Use the DPLL algorithm with Boolean Constrain Propagation (without PL and clause learning) to determine whether or not the set of clauses given is satisfiable. Decide variables in alphabetical order starting with the positive phase. If the set of clauses resulted in SAT, give a satisfying model.

Clause 1: $(\neg a \lor b)$

Clause 2: $(\neg b \lor c)$

Clause 3: $(\neg c \lor d)$

Clause 4: $(\neg d \lor e)$

Clause 5: $(\neg e \lor \neg a)$

Solution:

a = F, b = T, c = T, d = T, e = T

4. [Lecture] In the context of the DPLL algorithm, explain what a Pure Literal is. Give an example. Solution:

Definition - Pure Literal. A literal is pure if its negation does not appear in the formula.

5. [Lecture] In the context of the DPLL algorithm, explain why it is advantageous to apply Boolean Constrain Propagation (BCP) and Pure Literals (PL) before making a decision. Solution:

Boolean Constraint Propagation and Pure Literals are so-called heuristics. BCP and PL capture when the choices we can make are restricted in two different ways. It is advantageous to apply these heuristics before making a decision, since it reduces the amount of different assignments we have to check.

4 SAT SOLVERS 4.1 Lecture

6. [Lecture] Use the DPLL algorithm with Boolean Constrain Propagation and Pure Literals (without clause learning) to determine whether or not the set of clauses given is satisfiable. Decide variables in alphabetical order starting with the *positive* phase. If the set of clauses resulted in SAT, give a satisfying model.

Clause 1: $(\neg a \lor b)$

Clause 2: $(\neg b \lor c)$

Clause 3: $(\neg c \lor d)$

Decision	-	-	-	-	SAT
Model.					

a = F, b = F, c = F, d = F, e = F

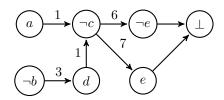

7. [Lecture] In the context of the DPLL algorithm, explain what Conflict-Driven Clause Learning is and why most modern SAT solvers use this technique. Solution:

The idea of conflict-driven clause learning is not to repeat steps that lead to a conflict.

When executing the DPLL algorithm we can maintain a so-called conflict graph. We can use this graph to deduce which variables lead to a conflict. In Conflict-Driven Clause Learning different SAT solvers apply different techniques to extract new learned clauses from this graph.

The learned clauses help the SAT solver to no repeat mistakes in different execution branches.

8. [Lecture] Consider the following conflict graph with the following set of clauses:

Clause 1: $\{\neg a, \neg c, \neg d\}$

Clause 2: $\{a, \neg d\}$

Clause 3: $\{b, d\}$

Clause 4: $\{\neg b, d, e\}$

Clause 5: $\{\neg b, \neg e\}$

Clause 6: $\{c, \neg e\}$

Clause 7: $\{c, e\}$

Give the resolution proof for the given conflict graph and clauses and state the clause to be learned from the conflict.

Solution:

$$\begin{array}{c|c} \underline{ 6 \ c \lor \neg e } & \underline{ 7 \ c \lor e } \\ \hline \underline{ c & \underline{ 1 \ \neg a \lor \neg c \lor \neg d } \\ \hline \underline{ -a \lor \neg d } & \underline{ 3 \ b \lor d } \\ \hline \hline \\ \hline \\ \hline \end{array}$$

The new learned clause is therefore Cl. 8: $\neg a \lor b$

9. [Lecture] Use the DPLL algorithm with conflict-driven clause learning to determine whether or not the set of clauses given is satisfiable. Decide variables in alphabetical order starting with the *negative* phase. For conflicts, draw conflict graphs after the end of the table, and add the learned clause to the table.

If the set of clauses resulted in SAT, give a satisfying model. If the set of clauses resulted in UNSAT, give a resolution proof that shows that the conjunction of the clauses from the table is unsatisfiable.

Clause 1: $\{\neg a, \neg b\}$

Clause 2: $\{a, c\}$

Clause 3: $\{b, \neg c\}$

Clause 4: $\{\neg b, d\}$

Clause 5: $\{\neg c, \neg d\}$

Clause 6: $\{c, e\}$

Clause 7: $\{c, \neg e\}$

Second Conflict in Step 16:

4.2 Practicals

For the following exercises use the DPLL algorithm (including Boolean Constraint Propagation (BCP), pure literals, and conflict-driven clause learning) to check on paper, if the following CNF formulas are satisfiable.

If the formula is satisfiable, give a satisfying model, else show a complete resolution proof for the formula's unsatisfiability.

- Write down all the steps of the DPLL algorithm,
- draw the conflict graphs,
- and state the resolution proofs for all learned clauses

Rules:

- When resolving a conflict, only undo the last decision.
- Choose variables for decisions, BCP and pure literals in alphabetical order, starting with the *negative* phase $(\neg a > a > \neg b > b...)$.
- Always try to perform BCP first, before checking for pure literals, before making a decision.

1. [Practicals] [2 Points]

7. [Practicals] [3 Points]

You are about to plan a train journey in Europe, but you are not yet sure, where to go. You have a few cities in mind, but there are a few restrictions due to a pandemic:

Your biggest wish is to go to Paris, you are definitely going there. After visiting Paris you are either going to London, or to Madrid, but not both. There is no direct train from your home to Paris, therefore you can take a train either via Berlin or via Zurich. On your way back you can choose between Amsterdam or Zurich. As you want to visit as many cities as possible, you do not want to go trough Zurich twice, therefore you have to go at least through once trough Amsterdam or Berlin. As traveling is currently restricted due to a pandemic, you may not visit Madrid after you visited Berlin and vice versa. You may also not visit London after you went to Amsterdam and vice versa.

Create a CNF from this description. You can use the following rule to make the formula shorter:

$$(\neg s \wedge t) \vee (s \wedge \neg t) \vdash \neg s \vee \neg t$$

Then use the DPLL algorithm to figure out which which cities would be theoretically possible to visit during the vacation. Formulate your answer as a sentence in English. Solution:

There is no solution available for this question yet.

4.3 Self-Assessment

4.3.1 The SAT-Problem

12. [Self-Assessment] Define the Boolean Satisfiability Problem? Solution:

There is no solution available for this question yet.

13. [Self-Assessment] What is the complexity of the SAT-Problem? What does its complexity imply? Solution:

There is no solution available for this question yet.

4.3.2 The DPLL-Algorithm

14. [Self-Assessment] Explain the basic *DPLL algorithm* for checking satisfiability of propositional formulas in *Conjunctive Normal Form (CNF)*. Give a pseudo-code implementation to illustrate your explanations. For simplicity, you can skip all advanced concepts such as Boolean Constraint Propagation, Pure Literals, and Clause Learning. Solution:

There is no solution available for this question yet.

15. [Self-Assessment] SAT solvers make choices based on heuristics on which variable and value to pick for the next decision. (a) Why is the variable order for decisions important for the performance of SAT solvers? (b) Explain a commonly used decision heuristics. Solution:

There is no solution available for this question yet.

16. [Self-Assessment] Given a formula φ in CNF representation. (a) What is a partial assignment of variables? (b) What is a total assignment of variables? (c) What does it mean that a clause in conflicting with an assignment? (d) What does it mean that a clause in satisfied by an assignment? Solution:

- 17. [Self-Assessment] Given an formula φ in CNF representation and an assignment A. Tick the following statements if they are true.
 - \square A clause is *satisfied* by A, if A makes a clause true.
 - \square If a clause is *conflicting* with an assignment A, if the assignment makes the clause false.
 - \square If a clause is *conflicting* with an assignment A, all variables in the clause are given the opposite value in A.
 - \square A expression $\varphi[A]$ means that all variables within φ are assigned according to its truth values in A.

18. [Self-Assessment] Within the context of DPLL, explain the terms decision and decision level. Solution:

There is no solution available for this question yet.

- 19. [Self-Assessment] Given the set of clauses $C_{\varphi} = \{\{a, \neg b\}, \{\neg a, c\}, \{b, \neg c\}, \{\neg a, \neg c\}\}\}$ and the assignment $A = \{\neg a\}$. Tick the correct statements.
 - $\Box \varphi[A] = \{\{a, \neg b\}, \{\neg a, c\}, \{\neg a, \neg c\}\}\$
 - $\square \ \varphi[A] = \{\{c\}, \{b, \neg c\}, \{\neg c\}\}$
 - $\square \ \varphi[A] = \{ \{\neg b\}, \{b, \neg c\} \}$
 - $\Box \varphi[A] = \{ \{\neg b\}, \{c\}, \{b, \neg c\}, \{\neg c\} \}$
- 20. [Self-Assessment] In the context of the DPLL algorithm, what does a conflict that arises at decision level 0 imply about the satisfiability or unsatisfiability of a formula? Explain your answer. Solution:

There is no solution available for this question yet.

21. [Self-Assessment] Use the DPLL algorithm (without BCP, PL and clause learning) to determine whether or not the set of clauses given is satisfiable. Decide variables in alphabetical order starting with the positive phase. If the set of clauses resulted in SAT, give a satisfying model.

Clause 1: $(\neg a \lor b \lor \neg c)$

Clause 2: $(a \lor \neg b \lor c)$

Clause 3: $(\neg a \lor \neg b \lor c)$

Clause 4: $(a \lor b \lor \neg c)$

Solution:

There is no solution available for this question yet.

22. [Self-Assessment] Consider the formula φ that consists of the conjunction of the following clauses:

Clause 1: $(\neg a \lor b)$

Clause 2: $(\neg a \lor \neg d)$

Clause 3: $(c \lor \neg b)$

Clause 4: $(\neg c \lor d)$

Use the DPLL algorithm (without BCP, PL and clause learning) to determine whether or not the set of clauses given is satisfiable. If the set of clauses resulted in SAT, give a satisfying model.

- (a) Decide variables in alphabetical order starting with the *positive* phase.
- (b) Decide variables in alphabetical order starting with the negative phase.
- (c) What differences can you see between 22a and 22b? Explain in your own words, why for the DPLL algorithm making good decisions is very important.

Solution:

There is no solution available for this question yet.

23. [Self-Assessment] In the context of the DPLL algorithm, explain what *Boolean Constraint Propagation* is. Give an example. Solution:

There is no solution available for this question yet.

24. [Self-Assessment] Use the DPLL algorithm with Boolean Constrain Propagation (without PL and clause learning) to determine whether or not the set of clauses given is satisfiable. Decide variables in alphabetical order starting with the positive phase. If the set of clauses resulted in SAT, give a satisfying model.

Clause 1: $(\neg d \lor \neg b \lor \neg a)$

Clause 2: $(\neg e \lor a \lor \neg f)$

Clause 3: $(\neg a \lor c \lor b)$

Clause 4: $(f \lor a \lor e)$

Clause 5: $(d \lor \neg a \lor \neg b)$

Clause 6: $(\neg a \lor \neg c \lor b)$

Solution:

There is no solution available for this question yet.

25. [Self-Assessment] Why does the DPLL algorithm check for *Boolean Constraint Propagations* (BCP) and Pure Literals (PL) before making a decision? Solution:

There is no solution available for this question yet.

26. [Self-Assessment] Why is the decision level in the DPLL algorithm only incremented after a decision was made but not when the *Pure Literal Rule* or the *Boolean Constrain Propagation Rule* was applied? Solution:

There is no solution available for this question yet.

27. [Self-Assessment] Use the DPLL algorithm with Boolean Constrain Propagation and Pure Literals (without clause learning) to determine whether or not the set of clauses given is satisfiable. Decide variables in alphabetical order starting with the positive phase. If the set of clauses resulted in SAT, give a satisfying model.

Clause 1: $(\neg c \lor d)$

Clause 2: $(a \lor \neg d \lor \neg e)$

Clause 3: $(b \lor \neg c)$

Clause 4: $(c \lor e)$

Clause 5: $(\neg b \lor \neg c)$

Clause 6: $(a \lor b)$

Solution:

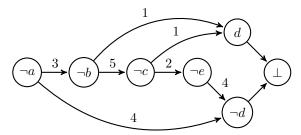

28. [Self-Assessment] Explain conflict driven clause learning (CDCL). How do learned clauses prevent the DPLL algorithm of running into already observed conflicts multiple times? Solution:

There is no solution available for this question yet.

29. [Self-Assessment] In the context of DPLL, give the definition of the *resolution rule* used to construct a resolution proof. Show how the resolution rule derives from the basic natural deduction rules by providing a natural deduction proof. Solution:

There is no solution available for this question yet.

30. [Self-Assessment] Consider the following conflict graph with the following set of clauses:

Clause 1: $\{b, c, d\}$

Clause 2: $\{c, \neg e\}$

Clause 3: $\{a, \neg b\}$

Clause 4: $\{a, \neg d, e\}$

Clause 5: $\{b, \neg c\}$

State the learned clause by making a resolution proof according to the given conflict graph and given clauses. Solution:

There is no solution available for this question yet.

31. [Self-Assessment] Consider the formula φ that consists of the conjunction of the following clauses:

Clause 1: $(a \lor b)$

Clause 2: $(\neg b \lor c)$

Clause 3: $(\neg a \lor \neg c)$

Clause 4: $(b \lor c)$

Clause 5: $(a \lor \neg b)$

- (a) Use DPLL with learning to show that φ is unsatisfiable. Decide variables in *alphabetic* order and starting with the positive phase.
- (b) State and briefly explain the resolution rule.
- (c) Using your results from 31a, give a resolution proof of the unsatisfiability of φ .

Solution:

32. [Self-Assessment] Use the DPLL algorithm with conflict-driven clause learning to determine whether or not the set of clauses given is satisfiable. Decide variables in alphabetical order starting with the *negative* phase. For conflicts, draw conflict graphs after the end of the table, and add the learned clause to the table.

If the set of clauses resulted in SAT, give a satisfying model. If the set of clauses resulted in UNSAT, give a resolution proof that shows that the conjunction of the clauses from the table is unsatisfiable.

```
Clause 1: \{a, b, \neg c\}
Clause 2: \{\neg b, c, d\}
Clause 3: \{c, d, \neg e\}
Clause 4: \{\neg a, d, \neg e\}
Clause 5: \{a, b, \neg d\}
Clause 6: \{c, \neg d, e\}
```

Solution:

There is no solution available for this question yet.

33. [Self-Assessment] Use the DPLL algorithm with conflict-driven clause learning to determine whether or not the set of clauses given is satisfiable. Decide variables in alphabetical order starting with the *negative* phase. For conflicts, draw conflict graphs after the end of the table, and add the learned clause to the table.

If the set of clauses resulted in SAT, give a satisfying model. If the set of clauses resulted in UNSAT, give a resolution proof that shows that the conjunction of the clauses from the table is unsatisfiable.

```
Clause 1: \{\neg a, \neg b\}
Clause 2: \{a, c, e\}
Clause 3: \{b, \neg d\}
Clause 4: \{\neg c, d, e\}
Clause 5: \{\neg d, e\}
Clause 6: \{\neg a, b\}
Clause 7: \{a, d, \neg e\}
```

Solution:

There is no solution available for this question yet.

34. [Self-Assessment] Use the DPLL algorithm with conflict-driven clause learning to determine whether or not the set of clauses given is satisfiable. Decide variables in alphabetical order starting with the *negative* phase. For conflicts, draw conflict graphs after the end of the table, and add the learned clause to the table.

If the set of clauses resulted in SAT, give a satisfying model. If the set of clauses resulted in UNSAT, give a resolution proof that shows that the conjunction of the clauses from the table is unsatisfiable.

```
Clause 1: \{a, \neg c\}
Clause 2: \{b, c, e\}
Clause 3: \{b, \neg e\}
```

```
Clause 4: \{\neg a, c\}
Clause 5: \{d, e\}
```

Clause 6: $\{b, \neg d\}$

Clause 7: $\{\neg d, \neg e\}$

Clause 8: $\{a, c\}$

Solution:

There is no solution available for this question yet.

35. [Self-Assessment] Use the DPLL algorithm with conflict-driven clause learning to determine whether or not the set of clauses given is satisfiable. Decide variables in alphabetical order starting with the *negative* phase. For conflicts, draw conflict graphs after the end of the table, and add the learned clause to the table.

If the set of clauses resulted in SAT, give a satisfying model. If the set of clauses resulted in UNSAT, give a resolution proof that shows that the conjunction of the clauses from the table is unsatisfiable.

```
Clause 1: \{a, b\}
```

Clause 2: $\{\neg a, c\}$

Clause 3: $\{a, \neg d\}$

Clause 4: $\{\neg b, c\}$

Clause 5: $\{\neg c, d\}$

Clause 6: $\{\neg c, e\}$

Clause 7: $\{d, \neg e\}$

Solution:

There is no solution available for this question yet.

36. [Self-Assessment] Use the DPLL algorithm with conflict-driven clause learning to determine whether or not the set of clauses given is satisfiable. Decide variables in alphabetical order starting with the *negative* phase. For conflicts, draw conflict graphs after the end of the table, and add the learned clause to the table.

If the set of clauses resulted in SAT, give a satisfying model. If the set of clauses resulted in UNSAT, give a resolution proof that shows that the conjunction of the clauses from the table is unsatisfiable.

Clause 1: $\{\neg a, \neg b\}$

Clause 2: $\{a, d, e\}$

Clause 3: $\{b, \neg c\}$

Clause 4: $\{c, \neg d, e\}$

Clause 5: $\{\neg c, e\}$

Clause 6: $\{\neg a, b\}$

Clause 7: $\{a, c, \neg e\}$

Solution:

37. [Self-Assessment] Use the DPLL algorithm with conflict-driven clause learning to determine whether or not the set of clauses given is satisfiable. Decide variables in alphabetical order starting with the *negative* phase. For conflicts, draw conflict graphs after the end of the table, and add the learned clause to the table.

If the set of clauses resulted in SAT, give a satisfying model. If the set of clauses resulted in UNSAT, give a resolution proof that shows that the conjunction of the clauses from the table is unsatisfiable.

```
Clause 1: \{\neg b, c, d\}
```

Clause 2: $\{\neg b, \neg d\}$

Clause 3: $\{a, \neg c\}$

Clause 4: $\{\neg c, e\}$

Clause 5: $\{b, c\}$

Clause 6: $\{\neg a, \neg e\}$

Solution:

There is no solution available for this question yet.

38. [Self-Assessment] Use the DPLL algorithm with conflict-driven clause learning to determine whether or not the set of clauses given is satisfiable. Decide variables in alphabetical order starting with the *negative* phase. For conflicts, draw conflict graphs after the end of the table, and add the learned clause to the table.

If the set of clauses resulted in SAT, give a satisfying model. If the set of clauses resulted in UNSAT, give a resolution proof that shows that the conjunction of the clauses from the table is unsatisfiable.

Clause 1: $\{b, d\}$

Clause 2: $\{b, c\}$

Clause 3: $\{\neg b, \neg e\}$

Clause 4: $\{\neg a, \neg c\}$

Clause 5: $\{\neg c, \neg d\}$

Clause 6: $\{\neg b, c\}$

Clause 7: $\{a, b\}$

Clause 8: $\{\neg b, d, e\}$

Solution:

There is no solution available for this question yet.

39. [Self-Assessment] Use the DPLL algorithm with conflict-driven clause learning to determine whether or not the set of clauses given is satisfiable. Decide variables in alphabetical order starting with the *negative* phase. For conflicts, draw conflict graphs after the end of the table, and add the learned clause to the table.

If the set of clauses resulted in SAT, give a satisfying model. If the set of clauses resulted in UNSAT, give a resolution proof that shows that the conjunction of the clauses from the table is unsatisfiable.

Clause 2: $\{b, e\}$

Clause 3: $\{c, d\}$

Clause 4: $\{\neg a, \neg e\}$

Clause 5: $\{a, \neg c, \neg e\}$

Clause 6: $\{c, \neg d\}$

Clause 7: $\{\neg b, \neg d\}$

Solution:

There is no solution available for this question yet.

40. [Self-Assessment] Use the DPLL algorithm with conflict-driven clause learning to determine whether or not the set of clauses given is satisfiable. Decide variables in alphabetical order starting with the *negative* phase. For conflicts, draw conflict graphs after the end of the table, and add the learned clause to the table.

If the set of clauses resulted in SAT, give a satisfying model. If the set of clauses resulted in UNSAT, give a resolution proof that shows that the conjunction of the clauses from the table is unsatisfiable.

Clause 1: $(a \lor b \lor c)$

Clause 2: $(\neg a \lor b)$

Clause 3: $(\neg b \lor c)$

Clause 4: $(\neg c \lor d)$

Clause 5: $(\neg c \lor e)$

Clause 6: $(\neg d \lor \neg e)$

Solution:

There is no solution available for this question yet.

41. [Self-Assessment] It is Sunday and your fridge is almost empty. You think that you can probably prepare a decent pizza with the little ingredients you have.

You do have dough. The dough is absolutely necessary for your pizza. You also have arugula, bell pepper and eggplant. You want to put at least one of those three ingredients as toppings on your pizza. Cheese is necessary for the pizza too. You have cheddar and feta. You can use one or both kinds of cheese. You don't like the combination of feta and bell pepper, so you can put at most one of those two ingredients on your pizza. Furthermore you need to save some veggies for dinner, so you can only use either the bell pepper or the eggplant for your pizza.

Create a CNF from this description. You can use the following rule to make the formula shorter:

$$(\neg s \wedge t) \vee (s \wedge \neg t) \vdash \neg s \vee \neg t$$

Then use a DPLL to figure out which ingredients you should use for your pizza and which ingredients you shouldn't use. Formulate your answer as a sentence. Solution:

42. [Self-Assessment] Your little cousin needs help to plan her birthday party. There are five kids she thinks about inviting, but not all of them get along. Here is what she tells you:

My very best friend is Anthony, I have to invite him! I'm also good friends with Daisy and Connie, I want at least one of them to come. But Daisy does not like Benjamin, I can't invite them both! But I do like Benjamin, and I also like Emily. I'd want one of them to be there, or both of them. But Emily is always fighting with Daisy, so only one of them can come.

Create a CNF from this description. You can use the following rule to make the formula shorter:

$$(\neg s \wedge t) \vee (s \wedge \neg t) \vdash \neg s \vee \neg t$$

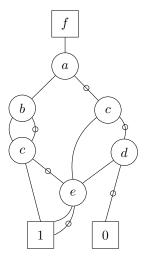

Then use the DPLL algorithm to figure out which kids your cousin should invite to her birthday party, which kids she should not invite and which kids she can invite without upsetting any other invited guests. Formulate your answer as a sentence. Solution:

5 Binary Decision Diagrams

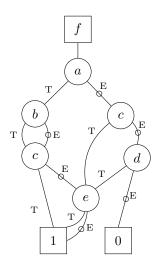

5.1 Lecture

5.1.1 Binary Decision Diagram

1. [Lecture] Given the Binary Decision Diagram (BDD) below, label and explain the different elements of the diagram.

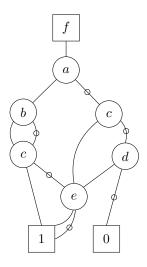

Solution:

A binary decision diagram represents a Boolean formula f. It is a DAG with two terminal nodes that are labelled with 0 and 1. The internal nodes are labelled with the Boolean variables of the formula (here a, b, c, d and e). Each internal node has exactly two outgoing edges: one edge labeled with a T (the then-edge), and another edge that is labeled with an E (the else-edge) or marked with a circle. There is a unique initial node called the function node labeled with f that does not have any incoming edges and one outgoing edge to the internal variable node on the first level.

2. [Lecture] Given the Binary Decision Diagram (BDD) below. (a) Find a satisfying model \mathcal{M}_1 , i.e., $\mathcal{M}_1 \models f$. (b) Find a falsifying model \mathcal{M}_2 , i.e., $\mathcal{M}_2 \not\models f$.

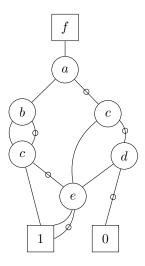

Solution:

(a)
$$\mathcal{M}_1 = \{a = \top, b = \top, c = \top\}$$

(b)
$$\mathcal{M}_2 = \{a = \bot, c = \bot, d = \bot\}$$

3. [Lecture] Given the Binary Decision Diagram (BDD) below. Construct the formula f in disjunctive normal form (DNF) that is represented by the BDD.

Solution:

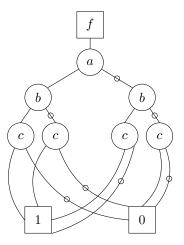

$$\begin{split} f &= (a \wedge b \wedge c) \vee (a \wedge \neg b \wedge c) \vee (a \wedge b \wedge \neg c \wedge e) \vee (a \wedge \neg b \wedge \neg c \wedge e) \vee \\ (a \wedge b \wedge \neg c \wedge \neg e) \vee (a \wedge \neg b \wedge \neg c \wedge \neg e) \vee (\neg a \wedge c \wedge e) \vee (\neg a \wedge c \wedge \neg e) \vee \\ (\neg a \wedge \neg c \wedge d \wedge e) \vee (\neg a \wedge \neg c \wedge d \wedge \neg e) \end{split}$$

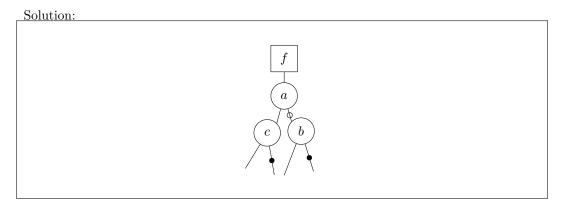

5.1.2 Reduced Ordered BDDs

In the following examples, we have the following convention: Else-edges are marked with circles. Filled circles represent the *complemented* attribute. Dangling edges are assumed to

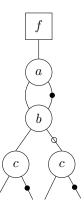

point to the constant node true.

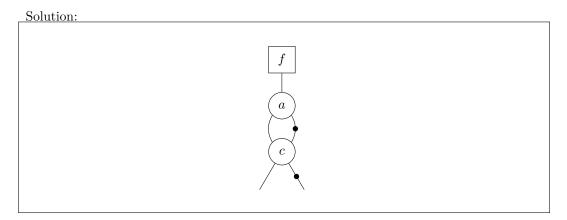

4. [Lecture] Transform the given Binary Decision Diagram (BDD) into a reduced ordered BDD (ROBDD) using the variable order a < b < c.

5. [Lecture] Transform the given Binary Decision Diagram (BDD) into a reduced ordered BDD (ROBDD) using the variable order a < b < c.

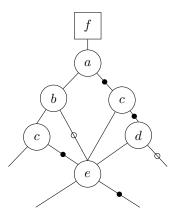

6. [Lecture] A Reduced and Ordered Binary Decision Diagram (ROBDD) is a canonical representation of a Boolean formula. Explain what this means and why this is the case. Solution:

This means that for a given variable order, if two formulas f_1 and f_2 are semantically equivalent, they will be represented through the same ROBDD.

The representations of two formulas as ROBDDs do not have any redundancies and have the same satisfying models. Under the assumption that the same variable order has been chosen, the ROBDD representations of two semantically equivalent formulas must therefore be the same.

7. [Lecture] Given the Binary Decision Diagram (BDD) below. Construct the formula f in disjunctive normal form (DNF) that is represented by the BDD.

Solution:

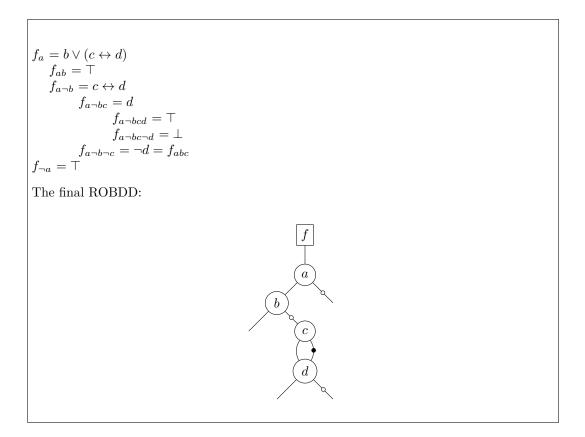

$$f = (a \wedge b \wedge c) \vee (a \wedge \neg b \wedge e) \vee (a \wedge b \wedge \neg c \wedge \neg e) \vee (\neg a \wedge \neg c \wedge \neg d) \vee (\neg a \wedge c \wedge \neg e) \vee (\neg a \wedge \neg c \wedge d \wedge e)$$

5.1.3 Construction of Reduced Ordered BDDs

8. [Lecture] Construct a ROBDD for the formula

$$f = (a \land b) \lor \neg a \lor (c \leftrightarrow d)$$

using alphabetic variable order. Use complemented edges and a node for true as the only constant node. To simplify drawing, you may assume that dangling edges point to the constant node. Write down all cofactors that you compute to obtain the final result and mark them in the graph. Solution:

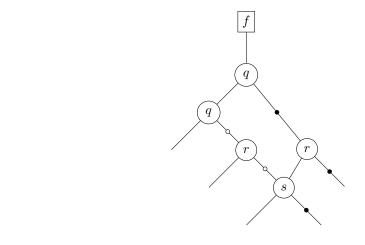

9. [Lecture] Construct a ROBDD for the formula

$$f = (r \land p) \lor (\neg r \land \neg p) \lor (s \land \neg r) \lor (\neg s \land r) \lor (\neg r \land q),$$

using variable order p < q < r < s. Use complemented edges and a node for true as the only constant node. To simplify drawing, you may assume that dangling edges point to the constant node. Write down all cofactors that you compute to obtain the final result and mark them in the graph. Solution:

$$\begin{split} f_p &= r \vee (s \wedge \neg r) \vee (\neg s \wedge r) \vee (\neg r \wedge q) \\ f_{pq} &= r \vee (s \wedge \neg r) \vee (\neg s \wedge r) \vee \neg r = \top \\ f_{p\neg q} &= r \vee (s \wedge \neg r) \vee (\neg s \wedge r) \\ f_{p\neg q} &= \top \\ f_{p\neg q \neg r} &= \top \\ f_{p\neg q \neg r} &= s \\ f_{p\neg q \neg r \neg s} &= \bot \\ f_{\neg p} &= \neg r \vee (s \wedge \neg r) \vee (\neg s \wedge r) \vee (\neg r \wedge q) \\ f_{\neg pq} &= \neg r \vee (s \wedge \neg r) \vee (\neg s \wedge r) \vee \neg r = \neg r \vee (s \wedge \neg r) \vee (\neg s \wedge r) \\ f_{\neg p \neg q} &= \neg r \vee (s \wedge \neg r) \vee (\neg s \wedge r) \\ &= \gamma q \text{ does not have an influence on the formula. These cofactors can be skipped.} \\ f_{\neg p \neg r} &= \neg s = f_{p \neg q \neg r} \\ f_{\neg p \neg r} &= \top \end{split}$$

The final ROBDD:

10. [Lecture] Construct a ROBDD for the formula

$$f = (r \land \neg p) \lor (\neg r \land p) \lor (s \land \neg r) \lor (\neg s \land r) \lor (r \land q),$$

using variable order p < q < r < s. Use complemented edges and a node for true as the only constant node. To simplify drawing, you may assume that dangling edges point to the constant node. Write down all cofactors that you compute to obtain the final result and mark them in the graph. Solution:

$$f = (r \land \neg p) \lor (r \land \neg p) \lor (s \land \neg r) \lor (r \land q),$$

$$f_p = \neg r \lor (s \land \neg r) \lor (\neg s \land r) \lor (r \land q)$$

$$f_{pq} = \top$$

$$f_{p\neg q} = r \lor (s \land \neg r) \lor (\neg s \land r)$$

$$f_{p\neg qr} = \top$$

$$f_{p\neg q\neg r} = s$$

$$f_{p\neg q\neg r \neg s} = \bot$$

$$f_{\neg pq \neg r \neg s} = \bot$$

$$f_{\neg pq} = r \lor (s \land \neg r) \lor (r \land q)$$

$$f_{\neg pq} = r \lor (s \land \neg r) \lor (\neg s \land r)$$

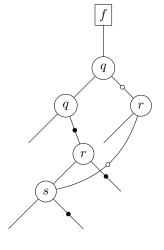

$$f_{\neg p\neg q} = r \lor (s \land \neg r) \lor (\neg s \land r)$$

$$\Rightarrow q \text{ does not have an influence on the formula. These cofactors can be skipped.}$$

$$f_{\neg pr} = \top$$

$$f_{\neg pr} = s = f_{p\neg q \neg r}$$

The final ROBDD:

5.2 Practicals

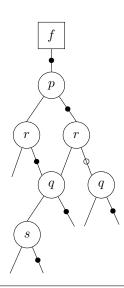

1. [Practicals] [2 Points]

(a) Use the BDD shown in the figure on the right to check if the formula it represents evaluates to true or false with the following variable assignments.

i.
$$\mathcal{M}_1: p = \top, r = \bot, q = \top, s = \bot$$

ii.
$$\mathcal{M}_2$$
: $p = \bot, r = \bot, q = \bot, s = \top$

(b) Find the formula f that is represented by the BDD.

Solution:

- (a) i. false
 - ii. false

(b)
$$f = (p \land \neg r \land q \land s) \lor (\neg p \land r \land q \land s) \lor (\neg p \land \neg r \land q)$$

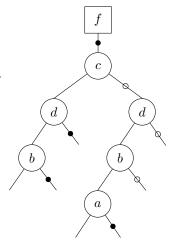

2. [Practicals] [2 Points]

(a) Use the BDD shown in the figure on the right to check if the formula it represents evaluates to true or false with the following variable assignments.

i.
$$\mathcal{M}_1$$
: $a = \bot, b = \top, c = \bot, d = \top$

ii.
$$\mathcal{M}_2$$
: $a = \top, b = \top, c = \top, d = \top$

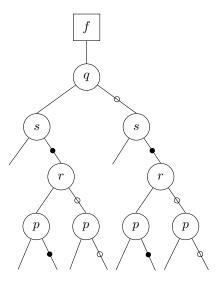

(b) Find the formula f that is represented by the BDD.

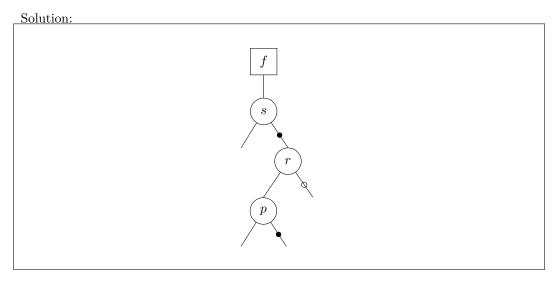

Solution:

- (a) i. true
 - ii. false
- (b) $f = (c \land \neg d) \lor (c \land d \land \neg b) \lor (\neg c \land d \land b \land \neg a)$

3. [Practicals] [2 Points] Convert the following BDD into a reduced ordered BDD.

4. [Practicals] [3 Points] Construct a ROBDD for the formula

$$f = (a \land d \land c) \lor (b \land \neg d \land \neg a) \lor (c \to \neg d) \lor (a \to \neg b)$$

using variable order b < a < d < c. Use complemented edges and a node for true as the only constant node. To simplify drawing, you may assume that dangling edges point to the constant node. Write down all cofactors that you compute to obtain the final result and mark them in the graph. Solution:

$$f = (a \land d \land c) \lor (b \land \neg d \land \neg a) \lor (c \to \neg d) \lor (a \to \neg b)$$

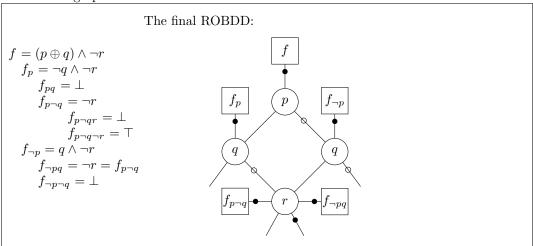

$$f_b = \top$$

$$f_{\neg b} = \top$$

5. [Practicals] [3.5 Points] Construct a reduced ordered binary decision diagram (ROBDD) for the formula

$$f = (p \oplus q) \land \neg r$$

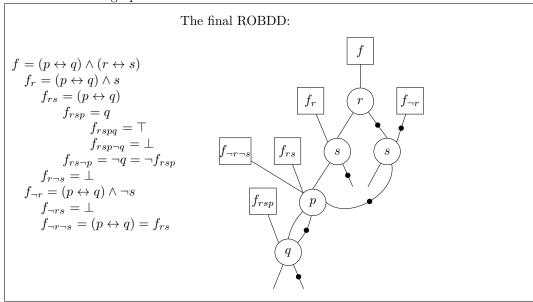

using variable order p < q < r. Use complemented edges and a node for true as the only constant node. To simplify drawing, you may assume that dangling edges point to the constant node. Write down all cofactors that you compute to obtain the final result and mark them in the graph. Solution:

6. [Practicals] [3.5 Points] Construct a ROBDD for the formula

$$f = (p \leftrightarrow q) \land (r \leftrightarrow s)$$

using variable order r < s < p < q. Use complemented edges and a node for true as the only constant node. To simplify drawing, you may assume that dangling edges point to the constant node. Write down all cofactors that you compute to obtain the final result and mark them in the graph. Solution:

7. [Practicals] [4 Points]

(a) Construct a Reduced Ordered Binary Decision Diagram (ROBDD) for the formula

$$f = (a \lor b \lor c) \land \neg d$$

using variable order c < a < d < b. Use complemented edges and a node for true as the only constant node. To simplify drawing, you may assume that dangling edges point to the constant node. Write down all cofactors that you compute to obtain the final result and mark them in the graph.

(b) Construct a Reduced Ordered Binary Decision Diagram (ROBDD) for f with a different variable order. The ROBDD should result in a smaller ROBDD, w.r.t. the number of nodes.

Solution:

(a) using variable order c < a < d < b:

$$f = (a \lor b \lor c) \land \neg d$$

$$f_c = \neg d$$

$$f_{ca} = \neg d$$

$$f_{c\neg a} = \neg d$$

$$\Rightarrow a \text{ does not have an influence}$$

on the formula. These cofactors can be skipped.

These cofactors can be skipped
$$f_{cd} = \bot$$

$$f_{c\neg d} = \top$$

$$f_{\neg c} = (a \lor b) \land \neg d$$

$$f_{\neg ca} = \neg d = f_c$$

$$f_{\neg c\neg a} = b \land \neg d$$

$$f_{\neg c\neg ad} = \bot$$

$$f_{\neg c\neg a\neg d} = b$$

$$f_{\neg c\neg a\neg db} = \top$$

$$f_{\neg c\neg a\neg db} = \bot$$

(b) using variable order d < a < b < c:

$$f = (a \lor b \lor c) \land \neg d$$

$$f_d = \bot$$

$$f_{\neg d} = a \lor b \lor c$$

$$f_{\neg da} = \top$$

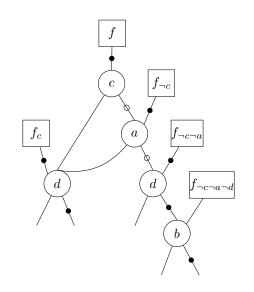

$$f_{\neg d\neg a} = b \lor c$$

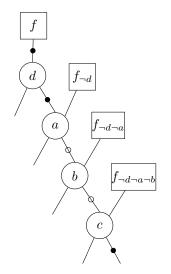

$$f_{\neg d\neg ab} = \top$$

$$f_{\neg d\neg a\neg b} = c$$

$$f_{\neg d\neg a\neg b\neg c} = \top$$

$$f_{\neg d\neg a\neg b\neg c} = \bot$$

5.3 Self-Assessment

5.3.1 Binary Decision Diagram

11	C 1C A
11.	Self-Assessment

Give the definition of a $Directed\ Acrylic\ Graph\ (DAG)$. Is the relation between a Binary Decision Diagrams (BDDs) and DAGs? Solution:

There is no solution available for this question yet.

12. [Self-Assessment]

- Give the definition of a Binary Decision Diagram (BDD).
- Draw an example and label and explain the different elements of the diagram.
- Explain the underlying structure of a BDD and explain, why BDDs are not trees.

Solution

There is no solution available for this question yet.

5.3.2 Reduced Ordered BDDs

	Giola Reduced Graeren BBBs	
13.	[Self-Assessment] In the following list tick all items which can be part of a $Reduced\ Ordered\ Binary\ Decision\ Diagram\ (ROBDD).$	
	☐ Function nodes	
	\Box (Complemented) edges	
	□ Self-Loops	
	□ Constant "true"-node	
	□ Variable pointers	
14.	Self-Assessment] Assume that you have already constructed a <i>Reduced Ordered Binary Decision Diagram (ROBDD)</i> for a given formula and variable order. What can happen, if you change the variable order and you draw the ROBDD for the same formula with the new order again? Solution:	
	There is no solution available for this question yet.	

15. [Self-Assessment] What is the worst-case size of a *Reduced Ordered Binary Decision Diagrams* (*ROBDDs*) with respect to the formula that it represents. What is the advantage of using a ROBDD to represent a formula compared to using a truth table?

Solution

There is no solution available for this question yet.

16. [Self-Assessment] How many nodes does a Reduced Ordered Binary Decision Diagrams (ROB-DDs) for a Boolean formula with n variables have, in worst-case?

2n
$\mathcal{O}(n^2)$
$\mathcal{O}(2^n)$
$2^{n+1}-1$
n^2

 \square infinitely many

17. [Self-Assessment] What is the worst-case size of a *Reduced Ordered Binary Decision Diagrams* (ROBDDs) with respect to the formula that it represents. What is the advantage of using a ROBDD to represent a formula compared to using a truth table?

Solution:

There is no solution available for this question yet.

- 18. [Self-Assessment] Tick all properties that apply to a Reduced Ordered Binary Decision Diagram (ROBDD).
 - \square A ROBDD is a canonical representation of its respective formula, for any fixed variable order
 - \square Since it is reduced, the number of nodes in the ROBDD does not exceed $2n^2$, where n is the number of variables.
 - \square The graph of an ROBDD may contain cycles.
 - ☐ A ROBDD represents a Boolean formula as directed acyclic graph (DAG).
 - \square Every node with two regular outgoing edges has two distinct child nodes.
 - \square No two nodes in an ROBDD represent the same formula.
- 19. [Self-Assessment] Using BDDs, how can you perform a negation of a formula in constant time? Solution:

There is no solution available for this question yet.

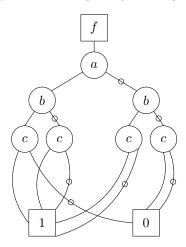

20. [Self-Assessment] Given a Reduced and Ordered Binary Decision Diagram (ROBDD). Explain how you can find the propositional logic formula f that is represented by a given ROBDD? Solution:

There is no solution available for this question yet.

21. [Self-Assessment] In the context of *Binary Decision Diagrams (BDDs)*, what are redundant nodes? Explain them in a few words and give an example of such a redundancy. Solution:

There is no solution available for this question yet.

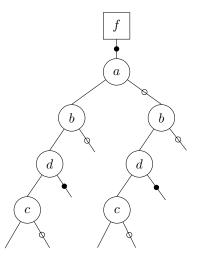

22. [Self-Assessment] Given the Binary Decision Diagram (BDD) below. Transform the BDD into a Reduced Ordered Binary Decision Diagram (ROBDD).

Solution:

There is no solution available for this question yet.

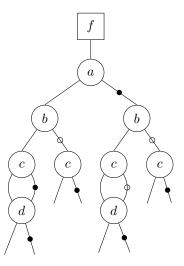

23. [Self-Assessment] Given the Binary Decision Diagram (BDD) below. Transform the BDD into a Reduced Ordered Binary Decision Diagram (ROBDD).

Solution:

There is no solution available for this question yet.

24. [Self-Assessment] Given the Binary Decision Diagram (BDD) below. Transform the BDD into a Reduced Ordered Binary Decision Diagram (ROBDD).

Solution:

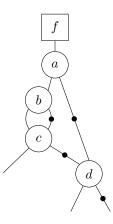

There is no solution available for this question yet.

25. [Self-Assessment] In the context of Binary Decision Diagrams (BDDs), how does the variable order impact the BDD? Solution:

There is no solution available for this question yet. 26. [Self-Assessment] Tick all properties that apply to a reduced and ordered BDD (ROBDD). ☐ If the *else*-edge of a node is complemented, it may point to the same child node as the then-edge. \square The size of a BDD is independent on the variable order. □ Logic operations, such as conjunction or disjunction, can be performed in polynomial time. \square The function of the *then*-edge and the *else*-edge of a terminal node is always true. 27. [Self-Assessment] Tick all properties that apply to a reduced and ordered BDD (ROBDD). \square Checks for entailment can be done in constant time. ☐ Using complemented edges, negation can be performed in constant time. \square Some formulas that can be expressed by truth tables cannot be expressed by BDDs. \square Equivalence checks can be performed in constant time (assuming that the BDDs for the formula to check are already available). ☐ The size of a BDD may depend significantly on the variable order, which is hard to optimize. 28. [Self-Assessment] Consider a Reduced and Ordered Binary Decision Diagram. Explain the meaning of the terms reduced and ordered in this context. Moreover, for each of these terms, draw an example of a Binary Decision Diagram that **does** <u>not</u> have the respective property. Solution: There is no solution available for this question yet.

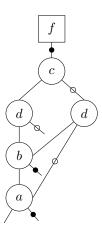

29. [Self-Assessment] Given the *Binary Decision Diagram (BDD)* below. State the formula f that is represented by the BDD.

Note: Else-edges are marked with circles. Filled circles represent the *complemented* attribute. Dangling edges are assumed to point to the constant node true.

30. [Self-Assessment] Given the Binary Decision Diagram (BDD) below. State the formula f that is represented by the BDD.

Note: Else-edges are marked with circles. Filled circles represent the *complemented* attribute. Dangling edges are assumed to point to the constant node **true**.

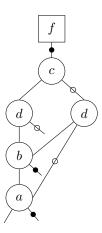

Solution:

There is no solution available for this question yet.

31. [Self-Assessment] Given the Binary Decision Diagram (BDD) below. State the formula f that is represented by the BDD.

Note: Else-edges are marked with circles. Filled circles represent the *complemented* attribute. Dangling edges are assumed to point to the constant node **true**.

Solution:

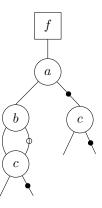

- 32. [Self-Assessment] Given the Binary Decision Diagram (BDD) below, ...
 - (a) ... check if the following variable assignments evaluate to true or to false.

i.
$$a = \top, b = \top, c = \bot$$

ii.
$$a = \bot, b = \bot, c = \bot$$

(b) ... find a propositional formula f, that is represented by the BDD.

Note: Else-edges are marked with circles. Filled circles represent the *complemented* attribute. Dangling edges are assumed to point to the constant node true.

Solution:

There is no solution available for this question yet.

33. [Self-Assessment] Given the Binary Decision Diagram (BDD) below, ...

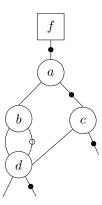

(a) ... check if the following variable assignments evaluate to true or to false.

i.
$$a = \top, b = \top, c = \bot, d = \bot$$

ii.
$$a = \bot, b = \bot, c = \top, d = \top$$

(b) ... find a propositional formula f, that is represented by the BDD.

Note: Else-edges are marked with circles. Filled circles represent the *complemented* attribute. Dangling edges are assumed to point to the constant node **true**.

Solution:

5.3.3 Construction of Reduced Ordered BDDs

34. [Self-Assessment] What is a cofactor of a formula? Given an example of a propositional logic formula and compute the positive and the negative cofactor for one variable of this formula. Solution:

There is no solution available for this question yet.

35. [Self-Assessment] Construct a Reduced Ordered Binary Decision Diagram (ROBDD) for the formula

$$f = (\neg a \lor b) \land (a \lor b),$$

using alphabetic variable order. Use complemented edges and a node for true as the only constant node. To simplify drawing, you may assume that dangling edges point to the constant node. Write down all cofactors that you compute to obtain the final result and mark them in the graph. Solution:

There is no solution available for this question yet.

36. [Self-Assessment] Construct a Reduced Ordered Binary Decision Diagram (ROBDD) for the formula

$$f = (\neg x \vee \neg y) \wedge (x \wedge (y \vee z)),$$

using variable order y < z < x. Use complemented edges and a node for true as the only constant node. To simplify drawing, you may assume that dangling edges point to the constant node. Write down all cofactors that you compute to obtain the final result and mark them in the graph. Solution:

There is no solution available for this question yet.

37. [Self-Assessment] Construct a Reduced Ordered Binary Decision Diagram (ROBDD) for the formula

$$f = (\neg x \land \neg y) \lor (x \land y),$$

using variable order z < x < y. Use complemented edges and a node for true as the only constant node. To simplify drawing, you may assume that dangling edges point to the constant node. Write down all cofactors that you compute to obtain the final result and mark them in the graph. Solution:

There is no solution available for this question yet.

38. [Self-Assessment] Construct a Reduced Ordered Binary Decision Diagram (ROBDD) for the formula

$$f = (\neg p \lor r) \land (q \lor \neg p) \land (\neg q \lor p)$$

using variable order r < q < p. Use complemented edges and a node for true as the only constant node. To simplify drawing, you may assume that dangling edges point to the constant node. Write down all cofactors that you compute to obtain the final result and mark them in the graph. Solution:

39. [Self-Assessment] Construct a Reduced Ordered Binary Decision Diagram (ROBDD) for the formula

$$f = (q \land \neg s) \lor (s \land (\neg r \lor p)) \lor (p \land q \land r)$$

using variable order p < q < r < s. Use complemented edges and a node for true as the only constant node. To simplify drawing, you may assume that dangling edges point to the constant node. Write down all cofactors that you compute to obtain the final result and mark them in the graph. Solution:

Predicate Logic

6.1 Lecture

6.1.1 Predicates and Quantifiers

- 1. [Lecture] Model the following declarative sentences with predicate logic, as detailed as possible. Clearly indicate the intended meaning of all function, predicate, and constant symbols that you use.
 - (a) Some students like Alice.
 - (b) Every teacher likes Bob.
 - (c) Some students like every teacher.
 - (d) Some students and Bob play a game.
 - (e) Not every student plays games.
 - (f) Some teachers play no games.

Solution:

```
\mathcal{A} = \{\text{people}\}\
(a) \exists x (S(x) \land L(x, Alice))
     S(x) \dots x is a student
      L(x,y) \dots x likes y
(b) \forall x (T(x) \rightarrow L(x, Bob))
     T(x) \dots x is a teacher
      L(x,y) \dots x likes y
(c) \exists x (S(x) \land \forall y (T(y) \rightarrow L(x,y)))
      S(x) \dots x is a student
      T(x) \dots x is a teacher
      L(x,y) \dots x likes y
(d) P(Bob) \wedge \exists x (S(x) \wedge P(x))
      S(x) \dots x is a student
      P(x) \dots x plays a game
(e) \neg \forall x (S(x) \rightarrow P(x))
      S(x) \dots x is a student
      P(x) \dots x plays a game
 (f) \exists x (T(x) \rightarrow \neg P(x))
     T(x) \dots x is a teacher
      P(x) \dots x plays a game
```

- 2. [Lecture] Model the following declarative sentences with predicate logic, as detailed as possible. Clearly indicate the intended meaning of all function, predicate, and constant symbols that you use.
 - (a) Alice has no sister.

- (b) A person who wears a crown is either a king or a queen.
- (c) Not everybody likes everybody.
- (d) Everybody loves somebody.

Solution:

```
\mathcal{A} = \{\text{people}\}
```

(a)
$$\forall x (A(x) \to \neg S(x))$$

 $A(x) \dots x$ is Alice
 $S(x) \dots x$ has a sister

(b)
$$\forall x (C(x) \to K(x) \lor Q(x))$$

 $C(x) \dots x$ wears a crown
 $K(x) \dots x$ is a king
 $Q(x) \dots x$ is a queen

(c)
$$\neg \forall x \forall y (L(x, y))$$

 $L(x, y) \dots x$ likes y

(d)
$$\forall x \exists y (L(x, y))$$

 $L(x, y) \dots x \text{ loves } y$

- 3. [Lecture] Model the following declarative sentences with predicate logic, as detailed as possible. Clearly indicate the intended meaning of all function, predicate, and constant symbols that you use.
 - (a) The construction side takes a long time, is noisy, and not blocks the sun.
 - (b) If there is no school, at least one parent of each kid has to take vacation and cannot got to work.
 - (c) All students have to take the exam eventually.

Solution:

```
(a) x ∧ y ∧ z
x ... the construction side takes a long time
y ... the construction side is noisy
z ... the construction side blocks the sun
(b) ¬a → ∀x∃y(K(x) ∧ P(x, y) → V(y) ∧ ¬W(y))
a ... there is school
K(x) ... x is a kid
P(x, y) ... y is parent of x
V(x) ... x takes vacation
W(x) ... x goes to work
A = {people}
(c) ∀(S(x) → E(x))
S(x) ... x is a student
E(x) ... x takes the exam
A = {people}
```

- 4. [Lecture] Model the following declarative sentences with predicate logic, as detailed as possible. Clearly indicate the intended meaning of all function, predicate, and constant symbols that you use.
 - (a) If all kids wear gloves, then all parents will be happy.
 - (b) All kids love pizza and spaghetti.
 - (c) All kids are fun, energetic, and cannot sit still.

Solution:

```
A = \{people\}
(a) \forall x (K(x) \land G(x) \rightarrow \forall y (P(y) \land H(y)))
K(x) \dots x is a kid
G(x) \dots x wears gloves
P(x) \dots x is a parent
H(x) \dots x is happy

(b) \forall x (K(x) \rightarrow P(x) \land S(x))
K(x) \dots x is a kid
P(x) \dots x loves pizza
S(x) \dots x loves spaghetti

(c) \forall x (K(x) \rightarrow F(x) \land E(x) \land \neg S(x))
K(x) \dots x is a kid
F(x) \dots x is fun
E(x) \dots x is energetic
S(x) \dots x can sit still
```

5. [Lecture] Consider the following declarative sentence (known as Goldbach's Conjecture): "Every even integer greater than 2 is equal to the sum of two prime numbers."

Model this sentence with predicate logic, as detailed as possible. Clearly indicate the intended meaning of all function, predicate, and constant symbols that you use. Solution:

```
 \begin{array}{c} \mathcal{A} = \mathbb{N} \\ E(x) \dots x \text{ is even} \\ G(x) \dots x \text{ is greater than 2} \\ P(x) \dots x \text{ is prime} \\ \forall x (E(x) \land G(x)) \ \rightarrow \ \exists a, b (P(a) \land P(b) \land (x = a + b)) \end{array}
```

6.1.2 Syntax of Predicate Logic

6. [Lecture] The syntax of predicate logic is defined via 2 types of sorts: terms and formulas. What are terms and what are formulas? Give examples for both. Solution:

terms: Terms talk about objects, they are elements of the domain: individual objects like Alice or Bob, variables since they represent objects like x, y, function symbols since they refer to objects like m(x) or x + y

formulas: Formulas have a truth value. Each predicate is a formula, e.g. S(x), P(x), $\forall x (S(x) \to P(x))$

- 7. [Lecture] Give the definition of the syntax of predicate logic. Therefore, give the definition of terms and formulas. Solution:
 - \mathcal{V} : Defines the set of variable symbols, e.g., x, y, z.
 - \mathcal{F} : Defines the set of function symbols, e.g., f, g, h.
 - \mathcal{P} : Defines the set of predicate symbols, e.g., P, Q, R.

Terms are defined as follows:

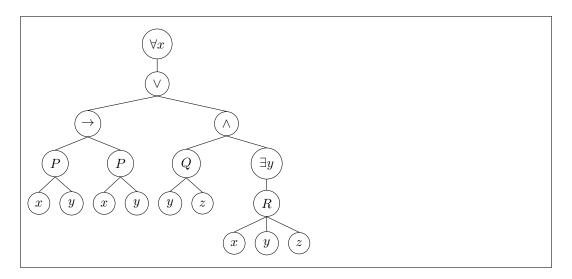

- Any variable is a term.
- If $c \in \mathcal{F}$ is a nullary function, then c is a term.
- If $t_1, t_2, \ldots t_n$ are terms and $f \in \mathcal{F}$ has arity n > 0, then $f(t_1, t_2, \ldots t_n)$ is a term.
- Nothing else is a term.

Formulas are defined as follows:

- If $P \in \mathcal{P}$ is a predicate with arity n > 0 and $t_1, t_2, \ldots t_n$ are terms over \mathcal{F} , then $P(t_1, t_2, \ldots t_n)$ is a formula.
- If φ is a formula, then $\neg \varphi$ is a formula.
- If φ and ψ are formulas, then $(\varphi \wedge \psi)$, $(\varphi \vee \psi)$, $(\varphi \to \psi)$ are formulas.
- If φ is a formula and x is a variable, then $(\forall x\varphi)$ and $(\exists x\varphi)$ are formulas.
- Nothing else is a formula.
- 8. [Lecture] Draw a syntax tree for the following formula:

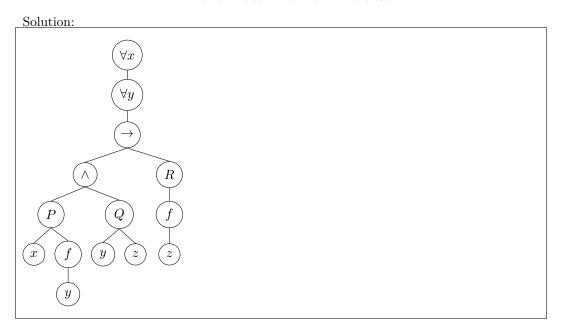

$$\forall x \; \Big(\big(P(x,y) \to P(x,x) \big) \vee \big(Q(y,z) \land \exists y \; R(x,y,z) \big) \Big)$$

Solution:

9. [Lecture] Draw the syntax tree for the following formula:

$$\forall x \exists y \ (P(x, f(y)) \land Q(y, z) \rightarrow R(f(z))).$$

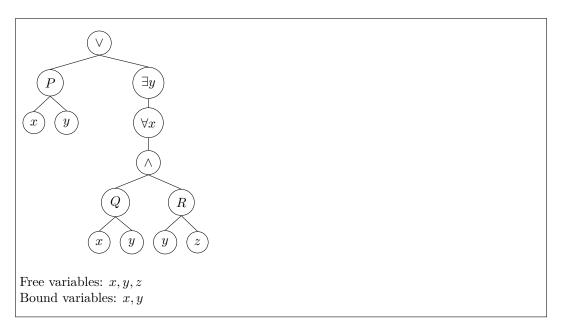

6.1.3 Free and Bound Variables

10. [Lecture] Given the formula

$$P(x,y) \vee \exists y \forall x \ (Q(x,y) \wedge R(y,z)),$$

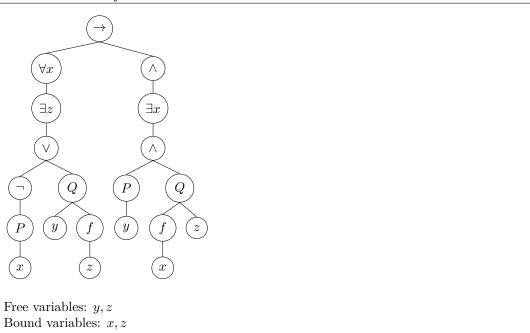

construct a syntax tree for φ and determine the scope of its quantifiers and which occurrences of the variables are free and which are bound. Solution:

11. [Lecture] Given the formula

$$\varphi = \forall x \exists z \ (\neg P(x) \lor Q(y, f(z))) \to (\exists x \ P(y) \land Q(f(x), z)),$$

construct a syntax tree for φ and determine the scope of its quantifiers and which occurrences of the variables are free and which are bound. Solution:

6.1.4 Semantics of Predicate Logic

12. [Lecture] Give a model \mathcal{M} for the following formula:

$$\varphi := \exists x \forall y P(x, y).$$

Solution:

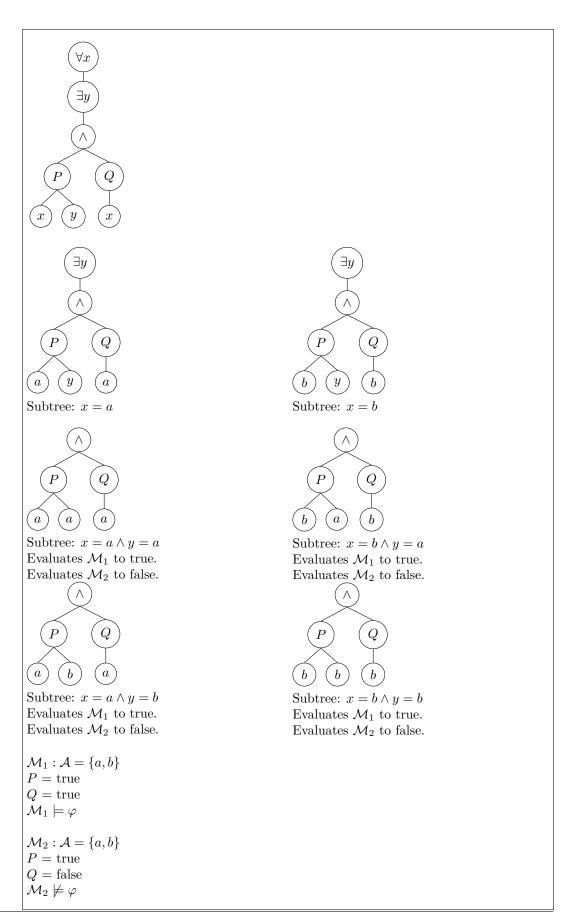

$$\mathcal{M}: \mathcal{A} = \{a, b\}$$

$$P^{\mathcal{M}} = \{(a, a), (a, b)\}$$

13. [Lecture] Consider the formula

$$\varphi \coloneqq \forall x \exists y (P(x,y) \land Q(x)).$$

Give a model the satisfies the formula and a second one that falsifies the formula. Show using the parse tree why your models satisfy are falsify the formula. Solution:

14. [Lecture] Consider the formula

$$\varphi = \exists x \forall y \ (P(x,y) \to (Q(x,y) \lor R(x,y))).$$

Does the following model \mathcal{M} satisfy the formula?

$$\mathcal{A} = \{a, b\}$$

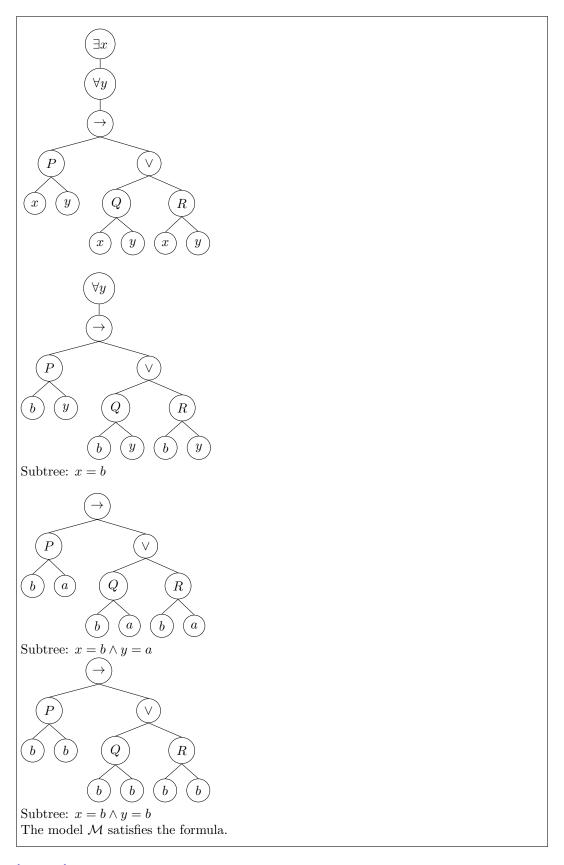

$$P^{\mathcal{M}} = \{(a, a), (a, b)\}$$

$$Q^{\mathcal{M}} = \{(a,a), (b,a)\}$$

Does the following model (v) sa

$$A = \{a, b\}$$

 $P^{M} = \{(a, a), (a, b)\}$
 $Q^{M} = \{(a, a), (b, a)\}$
 $R^{M} = \{(a, a), (b, b)\}$ Solution:

15. [Lecture] Give the definition of a model in predicate logic. Discuss what needs to be defined

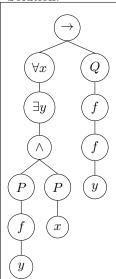

in a model of a predicate logic formula. Give an example for each data that could be contained in a model. Solution:

Definition - Model in Predicate Logic. A model \mathcal{M} consists of the following set of data:

- A non-empty set A, the universe/domain of concrete values;
- for each nullary function symbol $f \in \mathcal{F}$, a concrete element $f^{\mathcal{M}} \in \mathcal{A}$;
- for each nullary predicate symbol $P \in \mathcal{P}$, a truth value;
- for each function symbol $f \in \mathcal{F}$ with arity n > 0 a concrete function $f^{\mathcal{M}} : \mathcal{A}^n \to \mathcal{A}$;
- for each predicate smybol $P \in \mathcal{P}$ with arity n > 0: subset $P^{\mathcal{M}} \subseteq \mathcal{A}^n$;
- for any free variable var: a lookup-table $t : var \rightarrow A$.
- 16. [Lecture] For the following formula in *Predicate Logic*, find a *model* that satisfies the formula and one that does not. Draw a syntax tree and state all free variables while solving this task.

$$\forall x \exists y \ (P(f(y)) \land P(x)) \rightarrow Q(f(f(y)))$$

Solution:

Free variables: y

$$\mathcal{M}_1 : \mathcal{A} = \{a, b\}$$

$$P^{\mathcal{M}_1} = \text{true}$$

$$Q^{\mathcal{M}_1} = \text{true}$$

$$\mathcal{M}_1 \models \varphi$$

$$\mathcal{M}_2: \mathcal{A} = \{a, b\}$$
 $P^{\mathcal{M}_2} = \text{true}$
 $Q^{\mathcal{M}_2} = \text{false}$
 $\mathcal{M}_2 \not\models \varphi$

6.2 Self-Assessment

6.2.1 Predicates and Quantifiers

17. [Self-Assessment] Consider the following declarative sentences:

"Every person who has the same parents as John Doe and is different from John Doe himself is a sibling of John Doe."

Model this sentence with predicate logic, as detailed as possible. Clearly indicate the intended meaning of all function, predicate, and constant symbols that you use.

Also, model the same sentence in propositional logic, as detailed as possible. Clearly indicate the intended meaning of each propositional variable you use.

- 18. [Self-Assessment] Translate the following sentences into predicate logic. Be as precise as possible. Give the meaning of any function and predicate symbols you use.
 - (a) Nobody knows everybody.
 - (b) All birds can fly, except for penguins and ostrichs.
 - (c) Not all birds can fly, but some birds can fly.
 - (d) All kids are cute and quite if and only if they are sleeping

Solution:

There is no solution available for this question yet.

- 19. [Self-Assessment] Translate the following sentences into predicate logic. Be as precise as possible. Give the meaning of any function and predicate symbols you use.
 - (a) Every even integer greater than 2 is equal to the sum of two prime numbers.
 - (b) Every person who has the same parents as John Doe and is different from John Doe himself is a sibling of John Doe.

Solution:

There is no solution available for this question yet.

20. [Self-Assessment] Consider the following declarative sentence:

"For every natural number it holds that it is prime if and only if there is no smaller natural number, except for 1, that divides it."

Model this sentence with predicate logic, as detailed as possible. Clearly indicate the intended meaning of all function, predicate, and constant symbols that you use.

Also, model the same sentence in propositional logic, as detailed as possible. Clearly indicate the intended meaning of each propositional variable you use. Solution:

There is no solution available for this question yet.

21. [Self-Assessment]

"For all triangles it holds it is a scalene triangle iff all its sides have different lengths and all its angles have different measure."

Model this sentence with predicate logic, as detailed as possible. Clearly indicate the intended meaning of all function, predicate, and constant symbols that you use. Solution:

22. [Self-Assessment]

"Everyone gets a break once in a while, but the break cannot last forever"

Model this sentence with predicate logic, as detailed as possible. Clearly indicate the intended meaning of all function, predicate, and constant symbols that you use.

Also, model the same sentence in propositional logic, as detailed as possible. Clearly indicate the intended meaning of each propositional variable you use. Solution:

There is no solution available for this question yet.

- 23. [Self-Assessment] Model the following sentences with predicate logic, as detailed as possible. Clearly indicate the intended meaning of all function, predicate, and constant symbols that you use.
 - (a) Every integer is greater or equal to one.
 - (b) For any two integers, their sum is smaller than their product

Solution:

There is no solution available for this question yet.

6.2.2 Syntax of Predicate Logic

24. [Self-Assessment] Given is the following formula in predicate logic

$$\varphi = \forall x \exists y \Big(\big(Q(x, y) \land P(x, y) \big) \to \big(R(y, x) \land P(x, y) \big) \Big).$$

Draw the syntax tree for φ . Solution:

There is no solution available for this question yet.

25. [Self-Assessment] Given is the following formula in predicate logic

$$\varphi = \exists x \forall y \Big(\big(P(x, y) \to Q(x, y) \big) \lor \big(P(y, x) \to R(x, y) \big) \Big).$$

Draw the syntax tree for φ . Solution:

There is no solution available for this question yet.

6.2.3 Free and Bound Variables

- 26. [Self-Assessment] in the context of defining the syntax of predicate logic:
 - (a) What is the scope of a quantifier?
 - (b) What is the difference between free and bound variables?

Given an example. Solution:

27. [Self-Assessment] In the context of *Predicate Logic*, give a definition of *substitution* of variables. Solution:

There is no solution available for this question yet.

28. [Self-Assessment] What does it mean to substitute a term t for a variable x in a predicate logic formula? Which rules to you have to consider when performing substitution? Give an example. Solution:

There is no solution available for this question yet.

29. [Self-Assessment] Consider the following formula.

$$\varphi := \forall y (P(x) \land Q(y)) \lor (R(y) \land Q(x))$$

- (a) Compute $\varphi[f(x)/x]$.
- (b) Compute $\varphi[f(y)/x]$.
- (c) Compute $\varphi[f(z)/x]$.

Solution:

There is no solution available for this question yet.

30. [Self-Assessment] Consider the following formula.

$$\varphi := \forall y (P(x) \land Q(y)) \rightarrow \exists x (R(y) \land Q(x))$$

- (a) Compute $\varphi[f(y)/x]$.
- (b) Compute $\varphi[f(x)/y]$.
- (c) Compute $\varphi[k/z]$.
- (d) Compute $\varphi[x/z]$.

Solution:

There is no solution available for this question yet.

31. [Self-Assessment] Given the formula

$$\varphi = \forall x \exists z \ (\neg P(x) \lor Q(y, f(z))) \to (\neg \exists x \ P(y) \land Q(f(x), z)).$$

- (a) Compute $\varphi[f(y)/x]$.
- (b) Compute $\varphi[f(x)/y]$.
- (c) Compute $\varphi[k/z]$.
- (d) Compute $\varphi[x/z]$.

Solution:

6.2.4 Semantics of Predicate Logic

- 32. [Self-Assessment] In the following list, tick all items that are required for a complete model of a formula φ in predicate logic.
 - \square A non-empty, possibly infinite set of values for variables and functions.
 - \square A concrete value for every bound variable in φ .
 - \square A concrete value for free bound variable in φ .
 - \Box A definition for each predicate in $\varphi,$ detailing for which values/tuples the predicate returns true.
 - \square A definition for each function in φ , detailing for which values/tuples the predicate returns true.

Solution:

There is no solution available for this question yet.

- 33. [Self-Assessment] (a) Define a model for a formula in propositional logic?
 - (b) Define a model for a formula in predicate logic?

For both, state all components that the model needs to define. Solution:

There is no solution available for this question yet.

34. [Self-Assessment] Given is the following formula in predicate logic

$$\varphi = \forall x \exists y \Big(\big(Q(x,y) \land P(x,y) \big) \to \big(R(y,x) \land P(x,y) \big) \Big)$$

and the model \mathcal{M} :

- $A = \{a, b\}$
- $P^{\mathcal{M}} = \{(m, a) | m \in \mathcal{A}\}$
- $Q^{\mathcal{M}} = \{(b, m) | m \in \mathcal{A}\}$
- $R^{\mathcal{M}} = \{(a,b), (b,a), (b,b)\}$

Does the model \mathcal{M} satisfy the formula φ ? Explain your answer by drawing a **syntax tree** and evaluate the model \mathcal{M} with the help of this syntax tree. Solution:

There is no solution available for this question yet.

35. [Self-Assessment] Given is the following formula in predicate logic

$$\varphi = \exists x \forall y \Big(\big(P(x,y) \to Q(x,y) \big) \lor \big(P(y,x) \to R(x,y) \big) \Big)$$

and the model \mathcal{M} :

- $A = \{a, b\}$
- $P^M = \{(a,b), (b,b), (b,a)\}$
- $Q^M = \{(a,b), (a,b)\}$
- $R^M = \{(a,b), (a,b)\}$

Does the model \mathcal{M} satisfy the formula φ ? Explain your answer by drawing a **syntax tree** and evaluate the model \mathcal{M} with the help of this syntax tree. Solution:

There is no solution available for this question yet.

36. [Self-Assessment] For the formula below, find one model that satisfies the formula, and one model that does not satisfy the formula. Explain your answer by drawing a **syntax tree** and evaluate the model \mathcal{M} with the help of this syntax tree.

$$(P(x) \land Q(f(x))) \lor (\neg P(x) \land \neg Q(f(x))$$

Solution:

There is no solution available for this question yet.

37. [Self-Assessment] For the formula below, find one model that satisfies the formula, and one model that does not satisfy the formula. Explain your answer by drawing a **syntax tree** and evaluate the model \mathcal{M} with the help of this syntax tree.

$$\neg \forall x ((P(x) \to P(y)) \land P(x))$$

Solution:

There is no solution available for this question yet.

38. [Self-Assessment] For the formula below, find one model that satisfies the formula, and one model that does not satisfy the formula. Explain your answer by drawing a **syntax tree** and evaluate the model \mathcal{M} with the help of this syntax tree.

$$\forall x \exists y (P(f(x), y) \land \neg P(x, f(y)))$$

Solution:

There is no solution available for this question yet.

- 39. [Self-Assessment] For each of the formulas in *Predicate Logic* below, find a *model* that satisfies the formula and one that does not. Draw a syntax tree and state all free variables while solving this task.
 - (a) $\neg \forall x ((P(x) \rightarrow P(y)) \land P(x))$
 - (b) $\forall x \exists y (P(x,y) \land \neg P(f(x), f(y)))$

Solution:

7 Natural Deduction for Predicate Logic

7.1 Lecture

For each of the following sequents, either provide a natural deduction proof, or a counter-example that proves the sequent invalid.

For proofs, clearly indicate which rule, and what assumptions/premises/intermediate results you are using in each step. Also clearly indicate the scope of any boxes you use.

For counterexamples, give a complete model. Show that the model satisfies the premise(s) of the sequent in question, but does not satisfy the respective conclusion.

7.1.1 Proof Rules for Universal Quantification

1. [Lecture] $\forall x (P(x) \to Q(x)), \forall x P(x) \vdash \forall x Q(x)$. Solution:

1.
$$\forall x \ (P(x) \to Q(x))$$
 prem.
2. $\forall x \ P(x)$ prem.
 $3x_0 \quad P(x_0) \to Q(x_0) \quad \forall e \ 1$
4. $P(x_0) \quad \forall e \ 2$
5. $Q(x_0) \quad \to e \ 3,4$
6. $\forall x \ Q(x) \quad \forall i \ 3-5$

2. [Lecture] $\forall x \ P(x) \land \forall x \ (P(y) \to Q(x)) \vdash Q(z)$ Solution:

1.
$$\forall x \ P(x) \land \forall x \ (P(y) \to Q(x))$$
 prem.
2. $\forall x \ P(x)$ $\land e_1 \ 1$
3. $\forall x \ (P(y) \to Q(x))$ $\land e_2 \ 1$
4. $P(y)$ $\forall e \ 2$
5. $P(y) \to Q(z)$ $\forall e \ 3$
6. $Q(z)$ $\to e \ 5,4$

3. [Lecture] $\forall x \ P(x) \lor \forall x \ Q(x) \vdash \forall y \ (P(y) \lor Q(y))$ Solution:

1.	$\forall x \ P(x) \lor \forall x \ Q(x)$	prem.	
2.	$\forall x \ P(x)$	ass.	
3.	t P(t)	∀e 2	7
4.	$P(t) \vee Q(t)$	$\forall i_1 \ 3$	
5.	$\forall y \ (P(y) \lor Q(y))$	∀i 3-4	
6.	$\forall x \ Q(x)$	ass.	
7.	s $Q(s)$	∀e 6	7
8.	$P(s) \vee Q(s)$	$\vee i_2$ 7	
9.	$\forall y \ (P(y) \lor Q(y))$	∀i 7-8	
10.	$\forall y \ (P(y) \lor Q(y))$	\rightarrow e 1,2-5,6-9	

7.1.2 Proof Rules for Existential Quantification

4. [Lecture] $\forall x \ (P(x) \to Q(y)), \forall y \ (P(y) \land R(x)) \vdash \exists x \ Q(x))$ Solution:

1.
$$\forall x \ (P(x) \to Q(y))$$
 prem.
2. $\forall y \ (P(y) \land R(x))$ prem.
3. $P(t) \to Q(y)$ $\forall e \ 1$
4. $P(t) \land R(x)$ $\forall e \ 2$
5. $P(t)$ $\land e_1 \ 4$
6. $Q(y)$ $\to e \ 3$
7. $\exists x \ Q(x)$ $\exists i \ 6$

5. [Lecture] $\forall a \forall b \ (P(a) \land Q(b)) \qquad \vdash \qquad \forall a \exists b \ (P(a) \lor Q(b))$ Solution:

1.
$$\forall a \forall b \ (P(a) \land Q(b))$$
 prem.
2. $t \ \forall b \ (P(s) \land Q(b))$ $\forall e \ 1$
3. $P(s) \land Q(t)$ $\forall e \ 2$
4. $P(s)$ $\land e_1 \ 3$
5. $P(s) \lor Q(t)$ $\lor i_1 \ 4$
6. $\exists b \ (P(s) \lor Q(b))$ $\exists i \ 5$
7. $\forall a \exists b \ (P(a) \lor Q(b))$ $\forall i \ 2\text{-}6$

6. [Lecture] Explain the \exists -elimination rule (\exists e). Why does this rule require a box and what does it mean that x_0 is fresh? Solution:

There is no solution available for this question yet.

7. [Lecture] $\exists x \neg P(x), \forall x \neg Q(x) \vdash \exists x (\neg P(x) \land \neg Q(x))$ Solution:

1.
$$\exists x \neg P(x)$$
 prem.
2. $\forall x \neg Q(x)$ prem.
3. $x_0 \neg P(x_0)$ ass.
4. $\neg Q(x_0)$ $\forall e \ 2$
5. $\neg P(x_0) \land \neg Q(x_0)$ $\land i \ 3,4$
6. $\exists x \ (\neg P(x) \land \neg Q(x))$ $\exists i \ 5$
7. $\exists x \ (\neg P(x) \land \neg Q(x))$ $\exists e \ 3-6$

8. [Lecture] Consider the following natural deduction proof for the sequent

$$\forall x \ (P(x) \to Q(x)), \quad \exists x \ P(x) \qquad \vdash \qquad \forall x Q(x).$$

Is the proof correct? If not, explain the error in the proof and either show how to correctly prove the sequent, or give a counterexample that proves the sequent invalid.

1.
$$\forall x \ (P(x) \rightarrow Q(x))$$
 prem.
2. $\exists x \ P(x)$ prem.
3. x_0
4. $P(x_0)$ ass.
5. $P(x_0) \rightarrow Q(x_0)$ $\forall e \ 1$
 $Q(x_0) \rightarrow e, 4,5$
7. $\forall x \ Q(x)$ $\forall i \ 4-6$
8. $\forall x \ Q(x)$ $\exists e \ 2,3-7$

Solution:

This sequent is not provable. Model \mathcal{M} :

$$\mathcal{A} = \{a, b\}$$

$$P^{\mathcal{M}} = \{a\}$$

$$Q^{\mathcal{M}} = \{a\}$$

$$\mathcal{M} \models \forall x \ (P(x) \to Q(x)), \quad \exists x \ P(x)$$

 $\mathcal{M} \nvDash \forall x Q(x)$

9. [Lecture] $\exists x \ (P(x) \to Q(y)), \quad \forall x \ P(x) \vdash Q(y)$ Solution:

1.
$$\exists x \ (P(x) \to Q(y))$$
 prem.
2. $\forall x \ P(x)$ prem.
3. $x_0 \ P(x_0) \to Q(y)$ ass.
4. $P(x_0) \ \forall e \ 2$
5. $Q(y) \ \rightarrow e \ 3,4$
6. $Q(y) \ \exists e \ 3-5$

7.1.3 Quantifier Equivalences

10. [Lecture] $\forall x \neg (P(x) \land Q(x)) \vdash \neg \exists x (P(x) \land Q(x))$ Solution:

1.
$$\forall x \ \neg (P(x) \land Q(x))$$
 prem.
2. $\exists x \ (P(x) \land Q(x))$ ass.
3. $t \ P(t) \land Q(t)$ ass.
4. $t \ P(t) \land Q(t)$ $t \ P$

11. [Lecture] $\neg \exists x \ (P(x) \land Q(x)) \vdash \forall x \ \neg (P(x) \land Q(x))$ Solution:

1.
$$\neg \exists x \ (P(x) \land Q(x)) \quad \text{prem.}$$
2.
$$t$$
3.
$$P(t) \land Q(t) \quad \text{ass.}$$
4.
$$\exists x \neg (P(x) \land Q(x)) \quad \exists i \ 3$$
5.
$$\bot \quad \neg e \ 1,4$$
6.
$$\neg P(t) \land Q(t) \quad \neg i \ 3-5$$
7.
$$\forall x \neg (P(x) \land Q(x)) \quad \forall i \ 2-6$$

7.1.4 Counterexamples

12. [Lecture] $\exists x \neg P(x), \exists x \neg Q(x) \vdash \exists x (\neg P(x) \land \neg Q(x))$ Solution:

This sequent is not provable. Model \mathcal{M} :

$$\mathcal{A} = \{a, b\}$$
$$P^{\mathcal{M}} = \{a\}$$

$$Q^{\mathcal{M}} = \{b\}$$

$$\mathcal{M} \models \exists x \ \neg P(x), \exists x \ \neg Q(x)$$

 $\mathcal{M} \nvDash \exists x \ (\neg P(x) \land \neg Q(x))$

13. [Lecture]
$$\exists x \ (P(x) \to Q(y)), \quad \exists x \ P(x) \vdash Q(y)$$
 Solution:

This sequent is not provable. Model \mathcal{M} : $\mathcal{A} = \{a,b\}$ $P^{\mathcal{M}} = \{a\}$ $Q^{\mathcal{M}} = \{a\}$ $y \leftarrow b$ $\mathcal{M} \models \exists x \ (P(x) \rightarrow Q(y)), \quad \exists x \ P(x)$ $\mathcal{M} \not\models Q(y)$

7.2 Practicals

For each of the following sequents, either provide a natural deduction proof, or a counter-example that proves the sequent invalid.

For proofs, clearly indicate which rule, and what assumptions/premises/ intermediate results you are using in each step. Also clearly indicate the scope of any boxes you use.

For counterexamples, give a complete model. Show that the model satisfies the premise(s) of the sequent in question, but does not satisfy the respective conclusion.

- 1. [Practicals] [1 Point] $(\forall x (\neg A(x)) \lor (\exists x (B(x)) \vdash \forall x (\neg A(x) \lor B(x))$ Solution: There is no solution available for this question yet.
- 2. [Practicals] [1 Point] $(\forall x (\neg A(x)) \lor (\exists x (B(x)) \vdash \exists x (\neg A(x) \lor B(x))$ Solution: There is no solution available for this question yet.
- 3. [Practicals] [1 Point] $\exists b \ (a \to B(b)) \vdash a \to \exists b \ B(b)$ Solution:

 There is no solution available for this question yet.
- 4. [Practicals] [1 Point] $\exists x \ (S(x) \to T(x)), \neg T(z) \land \neg T(y) \vdash \neg S(y)$ Solution:

 There is no solution available for this question yet.
- 5. [Practicals] [1 Point] $\forall r \ U(r) \land \forall r \ (S(r) \to T(r)) \qquad \vdash \qquad \exists r \ \neg T(x) \to \exists r (\neg S(r) \land U(r))$ Solution:

 There is no solution available for this question yet.
- 6. [Practicals] [1 Point] $\exists a \ (P(a) \lor Q(a)), \quad \exists a \ P(a) \to R(c), \quad \exists b \ Q(b) \to R(c) \quad \vdash \quad R(c)$ Solution:

 There is no solution available for this question yet.
- 7. [Practicals] [1 Point] $\exists x \ P(x) \to \exists x \ Q(x) \vdash \exists x \ (P(x) \to Q(x))$ Solution:

There is no solution available for this question yet.

7.3 Self-Assessment

For each of the following sequents, either provide a natural deduction proof, or a counter-example that proves the sequent invalid.

For proofs, clearly indicate which rule, and what assumptions/premises/ intermediate results you are using in each step. Also clearly indicate the scope of any boxes you use.

For counterexamples, give a complete model. Show that the model satisfies the premise(s) of the sequent in question, but does not satisfy the respective conclusion.

7.3.1 Proof Rules for Universal Quantification

14. [Self-Assessment] Explain the \forall -introduction rule and the \forall -elimination rule. Explain why one rule needs a box while the other one does not. What does it mean that x_0 needs to be fresh? Solution:

There is no solution available for this question yet.

- 15. [Self-Assessment] $\forall x \ (P(x) \land Q(x)) \vdash \forall x \ ((Q(x) \lor R(x)) \land (R(x) \lor P(x)))$ Solution: There is no solution available for this question yet.
- 16. [Self-Assessment] $\forall x \ (P(x) \lor Q(x)), \quad \forall x \ (\neg P(x)) \vdash \forall x \ (Q(x))$ Solution:

 There is no solution available for this question yet.

7.3.2 Proof Rules for Existential Quantification

17. [Self-Assessment] $\exists x \ (Q(x) \to R(x)), \quad \exists x \ (P(x) \land Q(x)) \quad \vdash \quad \exists x \ (P(x) \land R(x))$ Solution:

There is no solution available for this question yet.

18. [Self-Assessment] $\forall x \ (Q(x) \to R(x)), \quad \exists x \ (P(x) \land Q(x)) \quad \vdash \quad \exists x \ (P(x) \land R(x)) \quad \text{Solution:}$

There is no solution available for this question yet.

7.3.3 Quantifier Equivalences

- 19. [Self-Assessment] $\neg \exists x \forall y \ (P(x) \land Q(y)) \vdash \forall x \exists y \ \neg (P(x) \land Q(y))$ Solution:

 There is no solution available for this question yet.
- 20. [Self-Assessment] $\forall x \exists y \neg (P(x) \land Q(y)) \vdash \neg \exists x \forall y \ (P(x) \land Q(y))$ Solution: There is no solution available for this question yet.

7.3.4 Counterexamples

21. [Self-Assessment] $\neg \exists x \neg P(x) \vdash \forall x \neg P(x)$ Solution:

There is no solution available for this question yet.

7.3.5 Mixed Examples

22. [Self-Assessment] $\forall x (P(x) \lor Q(y)), \forall x (P(x) \to R(z)), \forall y (Q(y) \to R(z)) \vdash R(z)$ Solution:

There is no solution available for this question yet.

23. [Self-Assessment] $\exists y \forall x (P(x,y)) \vdash \forall x \exists y (P(x,y))$ Solution:

There is no solution available for this question yet.

24. [Self-Assessment] $\exists a \forall b \ (S(b,a) \land T(b,a)) \vdash \forall b \forall a \ (S(b,a) \land T(b,a))$ Solution:

There is no solution available for this question yet.

25. [Self-Assessment] $P(y) \to \forall x Q(x), \exists x \neg Q(x) \vdash \exists x \neg P(x)$ Solution:

There is no solution available for this question yet.

26. [Self-Assessment] Consider the following natural deduction proof for the sequent

$$\exists x \neg P(x) \vdash \neg \forall x P(x).$$

Is the proof correct? If not, explain the error in the proof and either show how to correctly prove the sequent, or give a counterexample that proves the sequent invalid.

1.
$$\exists x \neg P(x)$$
 prem.

2.
$$\forall x P(x)$$
 ass.

3.
$$P(x_0)$$
 $\forall e 2$

4.
$$\exists x \ P(x) \quad \exists i \ 3$$

5.
$$\perp$$
 $\neg e 1,4$
6. $\neg \forall x P(x) \neg e 2-5$

Solution:

There is no solution available for this question yet.

27. [Self-Assessment] Consider the following natural deduction proof for the sequent

$$\exists x \ P(x) \lor \exists x \ Q(x) \vdash \exists x \ (P(x) \lor Q(x)).$$

Is the proof correct? If not, explain the error in the proof and either show how to correctly prove the sequent, or give a counterexample that proves the sequent invalid.

1.	$\exists x \ P(x) \lor \exists x \ Q(x)$	prem.
2.	$\exists x \ P(x)$	ass.
3.	$\begin{bmatrix} x_0 & P(x_0) \end{bmatrix}$	ass.
4.	$P(x_0) \vee Q(x_0)$	∨i₁ 3
5.	$\exists x \ (P(x) \lor Q(x))$	$\exists e \ 2,3-4$
6.	$\exists x \ Q(x)$	ass.
7.	$\begin{bmatrix} x_0 & Q(x_0) \end{bmatrix}$	ass.
8.	$P(x_0) \vee Q(x_0)$	∨i ₂ 7
9.	$\exists x \ (P(x) \lor Q(x))$	∃e 6,7-8
10.	$\exists x \ (P(x) \lor Q(x))$	∨e 1,2-5,6-9

There is no solution available for this question yet.

28. [Self-Assessment]
$$\forall x \exists y \ (P(x) \to Q(y)), P(s) \vdash \exists x \forall y \ (\neg P(x) \lor Q(y))$$
 Solution:

This sequent is not provable.

Model \mathcal{M} :

$$\mathcal{A} = \{a, b\}$$

$$P^{\mathcal{M}} = \{a, b\}$$

$$Q^{\mathcal{M}} = \{a\}$$

$$\mathcal{M} \models \forall x \exists y \ (P(x) \to Q(y)), P(s)$$

$$\mathcal{M} \nvDash \exists x \forall y \ (\neg P(x) \lor Q(y))$$

8 Transition Systems

8.1 Lecture

8.1.1 Transition Systems

1. [Lecture] Draw the graph for a transition system \mathcal{T} with: $S = \{s_1, s_2, s_3, s_4\}$, $S_0 = \{s_2\}$,

 $R = \{\{s_1, s_2\}, \{s_1, s_1\}, \{s_2, s_4\}, \{s_2, s_3\}, \{s_3, s_1\}, \{s_4, s_2\}, \{s_4, s_3\}\}, \text{ Solution:}$

2. [Lecture] Consider the example of an elevator. Initially, the elevator is in the ground floor. From the ground floor, it can either go basement, stay there for a while, and then go back to the ground floor, or it can go from the ground floor to the second floor, stay there for a while, and go back to the ground floor. While traveling between ground floor to second floor, the elevator passes the first floor, but it cannot stop there.

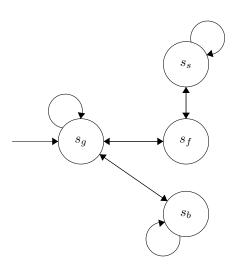

Model this elevator as transition system.

Solution:

We use the following states:

- s_g indicates that the elevator is on the ground floor.
- s_b indicates that the elevator is in the basement.
- s_s indicates that the elevator is on the second floor.
- s_f indicates that the elevator is passing the first floor.

The transition system is then given by: $\mathcal{T} = (S, S_0, R)$ with $S = \{s_g, s_b, s_s, s_f\}$, $S_0 = \{s_g\}$, $R = \{(s_g, s_g), (s_g, s_b), (s_b, s_b), (s_b, s_g), (s_g, s_f), (s_f, s_s), (s_s, s_s), (s_s, s_f), (s_f, s_g)\}$

8.1.2 Symbolic Encoding

Symbolic Representation of States

3. [Lecture] Given a state space of size $|S| = 2^4 = 16$, give the symbolic encoding for the following states: (a) s_7 , (b) s_{15} , and (c) s_{10} . Solution:

For the symbolic encoding we need 4 Boolean variables, $\{v_3, \ldots, v_0\}$. Let v_3 be the most significant bit, and v_0 the least significant bit.

- (a) $s_7 = \neg v_3 \wedge v_2 \wedge v_1 \wedge v_0$
- (b) $s_{15} = v_3 \wedge v_2 \wedge v_1 \wedge v_0$
- (c) $s_{10} = v_3 \wedge \neg v_2 \wedge v_1 \wedge \neg v_0$

4. [Lecture] Given is the set of states $S = \{s_0, \ldots, s_7\}$. Find formulas in propositional logic that symbolically represent the sets $A = \{s_7, s_6, s_3, s_2\}$, $B = \{s_1, s_3, s_5, s_7\}$, and $C = \{s_7, s_6, s_0, s_1\}$. Solution:

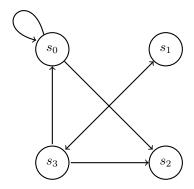

$$A = \{s_7, s_6, s_3, s_2\} = (v_2 \wedge v_1 \wedge v_0) \vee (v_2 \wedge v_1 \wedge \neg v_0) \vee (\neg v_2 \wedge v_1 \wedge v_0) \vee (\neg v_2 \wedge v_1 \wedge \neg v_0) = v_1$$

$$B = \{s_1, s_3, s_5, s_7\} = (\neg v_2 \land \neg v_1 \land v_0) \lor (\neg v_2 \land v_1 \land v_0) \lor (v_2 \land \neg v_1 \land v_0) \lor (v_2 \land v_1 \land v_0) = v_0$$

$$C = \{s_7, s_6, s_0, s_1\} = (v_2 \wedge v_1 \wedge v_0) \vee (v_2 \wedge v_1 \wedge \neg v_0) \vee (\neg v_2 \wedge \neg v_1 \wedge \neg v_0) \vee (\neg v_2 \wedge \neg v_1 \wedge v_0) \vee (\neg v_2 \wedge \neg v_0) \vee (\neg v_2 \wedge \neg$$

Symbolic Representation of the Transition Relation

5. [Lecture] Find a symbolic encoding for the transition relation of the following transition system and simplify your formulas. Use a binary encoding to encode the states, e.g., encode the state s_2 with the formula $v1 \land \neg v_0$.

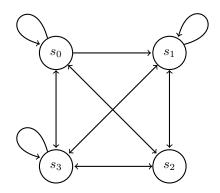

Solution:

Using the variables v_1 and v_0 , we can define the transition relation using the following formula:

We can further simplify the formula to:

6. [Lecture] Find a symbolic encoding for the transition relation of the following transition system and simplify your formulas. Use a binary encoding to encode the states, e.g., encode the state s_2 with the formula $v1 \land \neg v_0$.

Using the variables v_1 and v_0 , we can define the transition relation using the following formula:

We can further simplify the formula to:

Symbolic Encoding and Set Operations of Arbitrary Sets

7. [Lecture] Consider the domain $A = \{Spain, France, Italy, Germany\}$ and the two different symbolic encodings for A given below. Which one gives a shorter symbolic representation for the set $B = \{France, Germany\}$? Illustrate your answer by giving the representing formulas for B in both encodings.

Encoding 1					
Element	v_1	v_0			
Spain	0	0			
France	1	0			
Italy	0	1			
Germany	1	1			

Encoding 2					
Element	v_1	v_0			
Spain	0	0			
France	1	0			
Italy	1	1			
Germany	0	1			

Solution:

Using encoding 1, we end up in the following formula:

 $b = v_1$

Using encoding 2, we end up in the following formula: $b = (v_1 \wedge \neg v_0) \vee (\neg v_1 \wedge v_0)$

Encoding 1 gives a shorter symbolic representation for the set $B = \{France, Germany\}$.

- 8. [Lecture] Find a symbolic binary encoding for $X = \{0, 1, ..., 31\}$. Use it to find formulas that symbolically represent the sets A and B and simplify the formulas:
 - $A = \{12, 13, 14, 15, 28, 29, 30, 31\}$
 - $B = \{x \in X \mid 0 \le x \le 15\}$

Furthermore, give the formulas representing the sets $C = A \cap B$ and $D = A \cup B$. Solution:

We use 5 Boolean variables, $\{v_4, \ldots, v_0\}$, for the encoding.

$$A = (v_2 \wedge v_3)$$
$$B = \neg v_4$$

8.2 Self-Assessment

8.2.1 Transition Systems

9. [Self-Assessment] Draw the graph for a transition system \mathcal{T} with:

```
S = \{s_0, s_1, s_2\},
S_0 = \{s_0, s_1\},
R = \{\{s_0, s_0\}, \{s_0, s_1\}, \{s_0, s_2\}, \{s_1, s_0\}, \{s_1, s_1\}, \{s_1, s_2\}, \{s_2, s_0\}, \{s_2, s_1\}, \{s_2, s_2\}\}. Solution:
```

There is no solution available for this question yet.

10. [Self-Assessment]

Consider the example of a controller for a lamp.

Initially the light is off. Pressing the button once turns on the light and the light glows white. From this state, any short-lasting pressure of the button causes the light to switch its color randomly between white, red, green, blue, and yellow. At any state, pressing the button for a longer time turns the light off.

Model the lamp controller as transition system. Solution:

There is no solution available for this question yet.

8.2.2 Symbolic Encoding

Symbolic Representation of States

11. [Self-Assessment] Given a state space of size $|S| = 2^4 = 16$. Give the symbolic encoding for the following states: (a) s_4 , (b) s_9 , and (c) s_{13} . Solution:

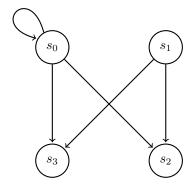

There is no solution available for this question yet.

12. [Self-Assessment] Given is the set of states $S = \{s_0, \ldots, s_7\}$. Find formulas in propositional logic that symbolically represent the sets $A = \{s_0, s_2, s_4, s_6\}$, $B = \{s_0, s_1, s_2, s_3\}$, and $C = \{s_7, s_1\}$. Solution:

There is no solution available for this question yet.

Symbolic Representation of the Transition Relation

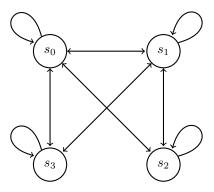

13. [Self-Assessment] Find a symbolic encoding for the set of initial states and the transition relation of the following transition system and simplify your formulas. Use a binary encoding to encode the states, e.g., encode the state s_2 with the formula $v1 \land \neg v_0$.

Solution:

There is no solution available for this question yet.

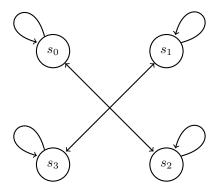

14. [Self-Assessment] Find a symbolic encoding for the set of initial states and the transition relation of the following transition system and simplify your formulas. Use a binary encoding to encode the states, e.g., encode the state s_2 with the formula $v1 \land \neg v_0$.

Solution:

There is no solution available for this question yet.

15. [Self-Assessment] Find a symbolic encoding for the set of initial states and the transition relation of the following transition system and simplify your formulas. Use a binary encoding to encode the states, e.g., encode the state s_2 with the formula $v1 \land \neg v_0$.

There is no solution available for this question yet.

16. [Self-Assessment] Define the *transition system* from the following symbolically encoded transition relations and draw the corresponding graph:

$$(v_1 \wedge v_0 \wedge \neg v_1' \wedge \neg v_0') \vee (\neg v_1 \wedge v_0 \wedge \neg v_1' \wedge v_0') \vee (v_1 \wedge v_0 \wedge v_1' \wedge v_0')$$

Solution:

There is no solution available for this question yet.

17. [Self-Assessment] Define the *transition system* from the following symbolically encoded transition relations and draw the corresponding graph:

$$(\neg v_1 \wedge \neg v_0 \wedge v_1' \wedge v_0') \vee (\neg v_1 \wedge v_0 \wedge \neg v_1' \wedge \neg v_0') \vee (\neg v_1 \wedge \neg v_0 \wedge \neg v_1' \wedge \neg v_0')$$

Solution:

There is no solution available for this question yet.

Symbolic Encoding and Set Operations of Arbitrary Sets

18. [Self-Assessment] What is the main advantage of symbolic set operations over non-symbolic operations that enumerate all set elements explicitly? Solution:

There is no solution available for this question yet.

19. [Self-Assessment] Listed are the participants of a seminar as well as their choice of snacks. Find a symbolic encodings for the participants. For for this encoding, give the symbolic representation of the set B of all participants that ordered bananas, and the set C of all participants that ordered cake.

Name	Snack
Alice	banana
Bob	cake
Carl	banana
David	banana
Eve	cake
Frank	cake
Greg	orange
Hank	cake

Solution:

There is no solution available for this question yet.

20. [Self-Assessment] Given a state space of size |S| = 2048, find a symbolic binary encoding for this state space and compute the characteristic function for the sets of states

$$B = \{s_0, s_1, s_2, ..., s_{1023}\}$$
 and $C = \{s_{512}, s_{513}, s_{514}, ..., s_{1535}.\}$

Then compute the characteristic function for the sets $D = B \cup C$ and $E = B \setminus C$. If possible, simplify the formulas. Solution:

There is no solution available for this question yet.

21. [Self-Assessment] The following table shows eight students and their means of transportation. Find a symbolic encodings representing the list of students. For this encoding, give the symbolic representation of the set B of all students that go by bike, and the set C of all students that go by car.

Name	Transportation	
Alice	Car	
Bob	Bike	
Carl	Tram	
David	Bike	Solution:
Eve	Tram	
Frank	Bike	
Greg	Tram	
Hank	Bike	

There is no solution available for this question yet.

22. [Self-Assessment] Consider the domain $A = \{Spain, France, Italy, Germany\}$ and the two different symbolic encodings for A given below. Which one gives a shorter symbolic representation for the set $B = \{France, Italy\}$? Illustrate your answer by giving the representing formulas for B in both encodings.

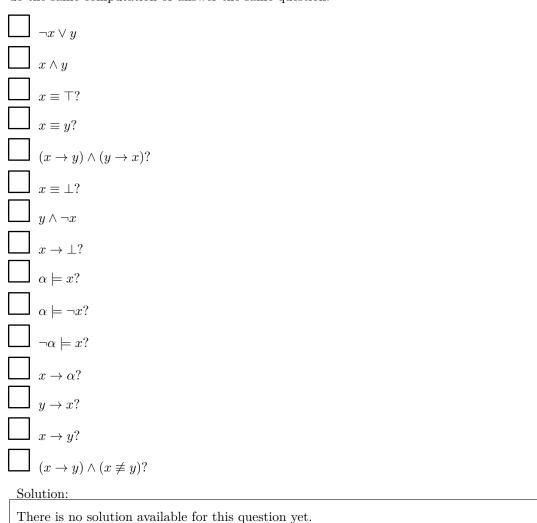

Encoding 1		L	Encod	ing 2	2
Element	v_1	v_0	Element	v_1	v_0
Spain	0	0	Spain	0	0
France	1	0	France	1	0
Italy	0	1	Italy	1	1
Germany	1	1	Germany	0	1

There is no solution available for this question yet.

- 23. [Self-Assessment] Consider the following set operations and relations between two sets X and Y, and an element a:
 - (a) Union: $X \cup Y$
 - (b) Intersection: X ∩ Y
 (c) Set Difference: X \ Y
 (d) Containment: a ∈ X?
 - (e) Subset: $X \subseteq Y$?
 - (f) Strict Subset: $X \subset Y$?
 - (g) Emptiness: $X = \emptyset$?
 - (h) Equality: X = Y?

Let x and y be the symbolic representations of X and Y respectively, and let α be the symbolic encoding of element a. For each of the following items, state which of the above operations is performed, or which of the above questions is answered. Write the letters of

the corresponding operation/question into the boxes of the items below. Note that some of the items below do not perform any of the above operations or answer any of the above questions. Put a "–" in the box of these items. Also note that some of the items below might do the same computation or answer the same question.

24. [Self-Assessment] Find a symbolic binary encoding for $X = \{0, 1, ..., 31\}$. Use it to compute formulas in propositional logic that symbolically represent the following sets.

- $B = \{4, 5, 12, 13, 20, 21, 28, 29\}$
- $C = \{1, 2, 13, 14\}$

Compute the characteristic functions of the following sets by symbolic operations, using your results from before.

- (a) $D = B \cup C$
- (b) $E = X \setminus D$

Solution:

- 25. [Self-Assessment] Find a symbolic binary encoding for $X = \{0, 1, ..., 31\}$. Use it to compute formulas in propositional logic that symbolically represent the following sets.
 - $B = \{x \in X \mid x \text{ is even}\}$
 - $C = \{x \in X \mid x \text{ is odd}\}$
 - $D = \{0, 1, 2, 3, 4, 5, 6, 7\}$

Compute the characteristic functions of the following sets by symbolic operations, using your results from before.

- (a) $E = B \cup D$
- (b) $F = C \cap E$
- (c) $G = E \setminus F$

Solution:

There is no solution available for this question yet.

- 26. [Self-Assessment] Find a symbolic binary encoding for $X = \{0, 1, ..., 31\}$. Use it to compute formulas in propositional logic that symbolically represent the following sets.
 - $B = \{8, 9, 10, 11, 12, 13, 14, 15\}$
 - $C = \{x \in X \mid 0 \le x \le 15\}$

Compute the characteristic functions of the following sets by symbolic operations, using your results from before.

- (a) $D = B \cup C$
- (b) $E = B \cap C$
- (c) $F = C \setminus B$

Solution:

There is no solution available for this question yet.

27. [Self-Assessment] Assume you are given the formulas a and b, which symbolically represent the sets A and B, respectively. Give the formula c, which symbolically represents the set $C = A \setminus B$. Solution:

There is no solution available for this question yet.

28. [Self-Assessment] Assume you are given the formulas a and b, which symbolically represent the sets A and B, respectively. What would you have to check on a, b to test whether or not A is a strict subset of B, i.e., $A \subset B$? Solution:

There is no solution available for this question yet.

29. [Self-Assessment] Given a state space of size |S| = 64. Find a symbolic binary encoding for this state space and compute the formulas that symbolically represent the sets

$$B = \{s_{32}, s_{33}, s_{34}, ..., s_{63}\}$$
 and $C = \{s_{16}, s_{17}, s_{18}, ..., s_{40}\}.$

Following, compute the formulas that represent the sets $D = B \cap C$, $E = B \cup C$, $F = B \setminus C$ and $G = C \setminus B$. Solution:

30. [Self-Assessment] Given a state space of size |S| = 64, find a symbolic binary encoding for this state space and compute the formulas that symbolically represent the sets of states

$$B = \{s_{16}, s_{17}, s_{18}, ..., s_{32}\}$$
 and $C = \{s_{24}, s_{25}, s_{26}, ..., s_{64}.\}$

Then compute the formulas that symbolically represent the sets $D = B \cap C$ and $E = B \cup C$. Solution:

9 Satisfiability Modulo Theories

9.1 Lecture

9.1.1 Definitions and Notations

1. [Lecture] Give the definition of a theory of formulas in first-order logic. Solution:

A theory is as a pair $(\Sigma; \mathcal{A})$ where Σ is a signature which defines a set of constant, function, and predicate symbols. The set of axioms \mathcal{A} is a set of closed predicate logic formulas in which only constant, function, and predicate symbols of Σ appear.

2. [Lecture] Explain the concept of a theory in first-order logic using the theory of Linear Integer Arithmetic \mathcal{T}_{LIA} as example. Solution:

Variables in \mathcal{T}_{LIA} are of integer sort (\mathbb{Z}). The functions of \mathcal{T}_{LIA} are + and - and the predicates are $=, \neq, <, >, \leq$, and \geq . The axioms withing \mathcal{T}_{LIA} define the meaning for these functions and predicates.

Therefore, for the theory of Linear Integer Arithmetic \mathcal{T}_{LIA} we have:

- $\Sigma = \{..., -3, -2, -1, 0, 1, 2, 3, ..., =, +, -, \neq, <, >, \leq, \geq\}$
- \mathcal{A} defines the usual meaning to all symbols. (Constant number symbols are mapped to the corresponding value in \mathbb{Z} , + is interpreted as the function $0+0 \to 0$, $0+1 \to 1$, etc.).
- 3. [Lecture] Explain the problem of satisfiability modulo theories. As part of your explanation, explain what a theory is and explain the meaning of theory-satisfiability.

Solution:

The satisfiability modulo theories (SMT) problem refers to the problem of determining whether a formula in predicate logic is satisfiable with respect to some theory. A theory fixes the interpretation/meaning of certain predicate and function symbols. Checking whether a formula in predicate logic is satisfiable with respect to a theory means that we are not interested in arbitrary models but in models that interpret the functions and predicates contained in the theory as defined by the axioms in the theory.

- 4. [Lecture] Explain the terms \mathcal{T} -terms, \mathcal{T} -atoms and \mathcal{T} -literals for SMT formulas. Solution:
 - Constants in Σ , variables, and applications of function symbols in Σ where all inputs are \mathcal{T} -terms are \mathcal{T} -terms.
 - A \mathcal{T} -atom is the application of a predicate symbol in Σ where all inputs are \mathcal{T} -terms.
 - A \mathcal{T} -literal is a \mathcal{T} -atoms or its negation.
- 5. [Lecture] What is the difference between a model of an SMT formula and a model of a predicate logic formula without a theory? Solution:

A model in predicate logic needs to define the domain of the variables and needs to define a concrete meaning to all predicate and function symbols and free variables involved. In SMT, the domain and the interpretation of the predicate and function symbols is fixed. A model for an SMT formula only defines an assignment to all free variables within the formula.

6. [Lecture] Given the signature $\Sigma_{EUF} := \{=, a, b, c, d, ..., f, g, h, ..., P, Q, R, ...\}$ of the Theory of Equality and Uninterpreted Functions \mathcal{T}_{EUF} . State the axioms \mathcal{A}_{EUF} of \mathcal{T}_{EUF} . Solution:

The axioms \mathcal{A}_{EUF} are the following:

- (a) $\forall x. \ x = x \text{ (reflexivity)}$
- (b) $\forall x, y. \ x = y \rightarrow y = x \text{ (symmetry)}$
- (c) $\forall x, y, z. \ x = y \land y = z \rightarrow x = z \text{ (transitivity)}$
- (d) $\forall \overline{x}, \overline{y}. \ (\bigwedge_{i=1}^n x_i = y_i) \to f(\overline{x}) = f(\overline{y}) \ (\text{congruence})$
- (e) $\forall \overline{x}, \overline{y}$. $(\bigwedge_{i=1}^n x_i = y_i) \to (P(\overline{x}) \leftrightarrow P(\overline{y}))$ (equivalence)
- 7. [Lecture] Explain the concepts of eager encoding and lazy encoding in the context of solving formulas in SMT. Solution:
 - In eager encoding, all axioms of the theory are explicitly incorporated into the input formula. The resulting equisatisfiable propositional formula is then given to a SAT solver
 - SMT solvers that use lazy encoding use specialized theory solvers in combination with SAT solvers to decide the satisfiability of formulas within a given theory. In contrast to eager encoding, where a sufficient set of constraints is computed at the beginning, lazy encoding starts with no constraints at all, and lazily adds constraints only when required.

9.1.2 Eager Encoding

8. [Lecture] Explain the concept of eager encoding to solve formulas in in SMT. Give the 3 main steps that are performed in algorithms based on eager encoding. Solution:

The main idea of eager encoding is that the input formula is translated into a propositional formula with all relevant theory-specific information encoded into the formula. Given a formula φ , algorithms based on eager encoding operate in three steps:

- (a) Replace any unique \mathcal{T} -atom in the original formula φ with a fresh Boolean variable to get a Boolean formula $\hat{\varphi}$.
- (b) Generate a Boolean formula φ_{cons} that constrains the values of the introduced Boolean variables to preserve the information of the theory.
- (c) Invoke a SAT solver on the Boolean formula $\varphi_{prop} := \hat{\varphi} \wedge \varphi_{cons}$ that corresponds to an equisatisfiable propositional formula to φ .
- 9. [Lecture] Explain the specific translations used in *eager encoding* to decide formulas in the theory of equality and uninterpreted functions. Solution:

The translations used in the eager approach for \mathcal{T}_{EUF} are:

- (a) Ackermann Reduction: to remove all function instances, resulting in an equisatisfiable formula in \mathcal{T}_E .
- (b) Graph-Based Reduction: to remove all equality instances, resulting in an equisatisfiable formula in propositional logic.

10. [Lecture] Given the formula

$$\varphi_{EUF}$$
 := $f(x) = f(y) \lor (z = y \land z \neq f(z))$

Apply the *Ackermann* reduction algorithm to compute an equisatisfiable formula in \mathcal{T}_E . Solution:

$$\varphi_{FC} := (x = y \to f_x = f_y) \land$$

$$(x = z \to f_x = f_z) \land$$

$$(y = z \to f_y = f_z)$$

$$\hat{\varphi}_{EUF} := f_x = f_y \lor (z = y \land z \neq f_z)$$

$$\varphi_E := \hat{\varphi}_{EUF} \land \varphi_{FC}$$

11. [Lecture] Given the formula

$$\varphi_{EUF}$$
 := $f(g(x)) = f(y) \lor (z = g(y) \land z \neq f(z))$

Apply the *Ackermann* reduction algorithm to compute an equisatisfiable formula in \mathcal{T}_E . Solution:

$$\varphi_{FC} := (x = y \to g_x = g_y) \land$$

$$(g_x = y \to f_{gx} = f_y) \land$$

$$(g_x = z \to f_{gx} = f_z) \land$$

$$(y = z \to f_y = f_z)$$

$$\hat{\varphi}_{EUF} := f_{gx} = f_y \lor (z = g_y \land z \neq f_z)$$

 $\varphi_E := \hat{\varphi}_{EUF} \wedge \varphi_{FC}$

12. [Lecture] Perform the graph-based reduction on the following formula to compute an equsatisfiable formula in propositional logic.

Given the formula

$$\varphi_{EUF}$$
 := $f(x,y) = f(y,z) \lor (z = f(y,z) \land f(x,x) \neq f(x,y))$

Apply the *Ackermann* reduction algorithm to compute an equisatisfiable formula in \mathcal{T}_E . Solution:

$$\varphi_{FC} := (x = y \land y = z \to f_{xy} = f_{yz}) \land$$

$$(x = x \land y = x \to f_{xy} = f_{xx}) \land$$

$$(y = x \land z = x \to f_{yz} = f_{xx})$$

$$\hat{\varphi}_{EUF} := f_{xy} = f_{yz} \lor (z = f_{yz} \land f_{xx} \neq f_{xy})$$

$$\varphi_{E} := \hat{\varphi}_{EUF} \land \varphi_{FC}$$

13. [Lecture] Perform graph-based reduction to translate the following formula in \mathcal{T}_E into an equisatisfiable formula in propositional logic.

$$\varphi_E := (a = b \lor a = d) \rightarrow (b = c \land c \neq d)$$

Solution:

We choose:

• Triangle 1: a-b-c

• Triangle 2: a-c-d

$$(e_{a=b} \wedge e_{a=c} \rightarrow e_{b=c}) \wedge$$

$$(e_{b=c} \wedge e_{a=c} \rightarrow e_{a=b}) \wedge$$

$$(e_{a=c} \wedge e_{c=d} \rightarrow e_{a=d}) \wedge$$

$$(e_{a=c} \wedge e_{a=d} \rightarrow e_{c=d}) \wedge$$

$$(e_{c=d} \wedge e_{a=d} \rightarrow e_{a=c})$$

$$\hat{\varphi}_E := (e_{a=b} \vee e_{a=d} \rightarrow (e_{b=c} \wedge \neg e_{c=d})$$

$$\varphi_{prop} := \varphi_{TC} \wedge \hat{\varphi}_E$$

 $\varphi_{TC} := (e_{a=b} \land e_{b=c} \rightarrow e_{a=c}) \land$

14. [Lecture] Perform graph-based reduction to translate the following formula in \mathcal{T}_E into an equisatisfiable formula in propositional logic.

$$\varphi_E := (a = b \lor a = d) \rightarrow (b = c \land c \neq e \land e \neq d)$$

Solution:

We choose:

• Triangle 1: a-b-c

• Triangle 2: a-c-d

• Triangle 3: c-d-e

$$\varphi_{TC} := (e_{a=b} \wedge e_{b=c} \rightarrow e_{a=c}) \wedge \\ (e_{a=b} \wedge e_{a=c} \rightarrow e_{b=c}) \wedge \\ (e_{b=c} \wedge e_{a=c} \rightarrow e_{a=b}) \wedge \\ (e_{b=c} \wedge e_{c=d} \rightarrow e_{a=b}) \wedge \\ (e_{a=c} \wedge e_{c=d} \rightarrow e_{c=d}) \wedge \\ (e_{a=c} \wedge e_{a=d} \rightarrow e_{c=d}) \wedge \\ (e_{c=d} \wedge e_{a=d} \rightarrow e_{a=c}) \wedge \\ (e_{c=e} \wedge e_{c=d} \rightarrow e_{d=e}) \wedge \\ (e_{c=e} \wedge e_{d=e} \rightarrow e_{c=d}) \wedge \\ (e_{c=e} \wedge e_{d=e} \rightarrow e_{c=e}) \\ \hat{\varphi}_E := (e_{a=b} \vee e_{a=d} \rightarrow (e_{b=c} \wedge \neg e_{c=e} \wedge \neg e_{e=d}) \\ \varphi_{prop} := \varphi_{TC} \wedge \hat{\varphi}_E$$

9.1.3 Lazy Encoding

15. [Lecture] Explain the concept of *Lazy Encoding* to decide satisfiability of formulas in a first-order theory. Solution:

The propositional skeleton of φ is given to a SAT solver. If a satisfying assignment is found, it is checked by a theory solver. If the assignment is consistent with the theory, φ is \mathcal{T} -satisfiable. Otherwise, a blocking clause is generated and the SAT solver searches for a new assignment. This is repeated until either a \mathcal{T} -consistent assignment is found, or the SAT solver cannot find any more assignments.

See figure in lecture notes on page 11.

16. [Lecture] Consider the following formula in the conjunctive fragment of \mathcal{T}_{EUF} .

$$\varphi_{EUF} := x = f(y) \land x \neq y \land y \neq u \land y = f(u) \land z \neq f(u) \land u = v \land v = z \land v = f(y) \land v \neq f(z) \land f(x) \neq f(z)$$

Use the Congruence Closure algorithm to determine whether this formula is satisfiable. Solution:

$$\begin{aligned} &\{x,f(y)\},\{y,f(u)\},\{u,\underline{v}\},\{\underline{v},z\},\{\underline{v},f(y)\},\{f(x)\},\{f(z)\} \\ &\{x,\underline{f(y)}\},\{y,f(u)\},\{u,v,z,v,\underline{f(y)},\{f(x)\},\{f(z)\} \} \\ &\{\underline{x},f(y),u,v,\underline{z},v\},\{y,f(u)\},\{\underline{f(x)}\},\{\underline{f(z)}\} \\ &\{x,f(y),\underline{u},v,\underline{z},v\},\{y,\underline{f(u)}\},\{f(x),\underline{f(z)}\} \\ &\{x,f(y),u,v,z,v\},\{y,f(u)\},\{f(x),f(z)\} \end{aligned}$$

Checking the disequality $f(x) \neq f(z)$ leads to the result that the assignment is UNSAT, since f(x) and f(z) are in the same congruence class.

9.2 Practicals

17. [Practicals] [3 Points] Given the formula:

$$\varphi_{EUF} := f(x) = y \land x = g(x) \lor x \neq f(x) \land g(x) = f(g(x)) \lor y \neq g(x) \land x = f(y) \land g(y) = f(g(x))$$

Apply the *Ackermann* reduction algorithm to compute an equisatisfiable formula in \mathcal{T}_E . Solution:

There is no solution available for this question yet.

18. [Practicals] [3 Points] Given the formula:

$$\varphi_{EUF}$$
 := $x = f(x,y) \land x \neq y \leftrightarrow z = f(x,y) \lor f(y,z) \neq z \land y \neq f(x,y) \lor y = f(x,z)$

Apply the *Ackermann* reduction algorithm to compute an equisatisfiable formula in \mathcal{T}_E . Solution:

There is no solution available for this question yet.

19. [Practicals] [3 Points] Perform graph-based reduction to translate the following formula in \mathcal{T}_E into an equisatisfiable formula in propositional logic.

$$\varphi_E := x \neq y \land y = c \lor c = d \rightarrow \neg (d \neq z \lor z = a) \land \neg (a = b \land x \neq z).$$

Solution:

There is no solution available for this question yet.

20. [Practicals] [5 Points] Consider the following formula in \mathcal{T}_{EUF} :

$$\varphi_{EUF}$$
 := $(y = z \lor f(x) = f(y)) \rightarrow (x = z \lor f(x) = x \land f(x) = y)$

Use Ackermann's reduction to compute an equisatisfiable formula in \mathcal{T}_E .

Then perform the graph-based reduction on the outcome of Ackermann's reduction to construct an equisatisfiable propositional formula. Solution:

21. [Practicals] [3 Points] Use the Congruence-Closure algorithm to check if the following assignment for the equalities is satisfiable.

$$\varphi_{EUF} \quad := \quad f(b) = a \land e = b \land c = f(c) \land d \neq f(e) \land f(a) = f(d) \land a \neq f(c) \land d = f(a)$$
 Solution:

There is no solution available for this question yet.

22. [Practicals] [3 Points] Use the Congruence-Closure algorithm to check if the following assignment for the equalities is satisfiable.

$$\varphi_{EUF} := f(o) = k \wedge l \neq f(m) \wedge n \neq l \wedge f(k) = m \wedge f(o) = f(k) \wedge o \neq k \wedge l \neq f(n) \wedge f(m) \neq k \wedge m \neq f(m) \wedge o = n \wedge f(m) = o$$

Solution:

There is no solution available for this question yet.

9.3 Self-Assessment

9.3.1 Definitions and Notations

23. [Self-Assessment] Explain the concept of a theory in first-order logic using the theory of Linear Real Arithmetic \mathcal{T}_{LRA} as example. Solution:

There is no solution available for this question yet.

- 24. [Self-Assessment] In the following list tick all formulas that are axioms of the theory of equalities and uninterpreted functions \mathcal{T}_{EUF} .
 - $\square \ \forall x (x = x)$
 - $\Box \ \forall x \, \forall y \, (x = y \vee y = x)$
 - $\Box \ \forall x \, \forall y \, \forall z \, (x = y \land y = z \rightarrow x = z)$
 - $\Box \ \forall x \, \forall y \, (f(x) = f(y) \to x = y)$
- 25. [Self-Assessment] A first-order theory \mathcal{T} is defined by a signature Σ and a set of axioms \mathcal{A} . Consider the *Theory of Equality* \mathcal{T}_E . Give its signature Σ_E and its axioms \mathcal{A}_E . Solution:

There is no solution available for this question yet.

26. [Self-Assessment] What is an *uninterpreted function*? What is the difference between an uninterpreted and an interpreted function? What are the properties of an uninterpreted function? Solution:

There is no solution available for this question yet.

- 27. [Self-Assessment] Provide the answers to the following questions:
 - When is a formula \mathcal{T} -valid?
 - When is a formula \mathcal{T} -satisfiable?
 - When do we have \mathcal{T} -entailment of two formulas?

Solution:

9.3.2 Eager Encoding

28.	$[\operatorname{Self-Assessment}]$ In the following list tick all statements that conform to the eager encoding approach for the implementation of SMT solver.
	$\hfill\Box$ Eager encoding is based on the interaction between a SAT solver and a so-called theory solver.
	\Box Eager encoding involves translating the original formula to an equisatisfiable boolean formula in a single step.
	$\hfill\Box$ Eager encoding is based on the direct encoding of axioms.
	$\hfill\Box$ Eager encoding starts with no constraints at all and adds constraints only when needed.
29.	[Self-Assessment]
	\bullet Explain the concept of $Eager\ Encoding$ to decide satisfiability of formulas in a first-order theory.
	• Explain how eager encoding works on the Theory of Equality \mathcal{T}_E .
	Solution:
	There is no solution available for this question yet.
30.	[Self-Assessment] In the following text fill the blanks with the missing word(s).
	The Ackermann's reduction is used to reduce a formula φ_{in} in
	to a formula in
	that is equisatisfiable. Two formulas are equisatisfiable if The algorithm adds ex-
	plicit constraints to the formula φ_{in} to enforce These constraints say, that $\forall \bar{x} \forall \bar{y} \ (\bigwedge_i x_i = y_i) \rightarrow \)$. The resulting equisatisfiable formula consists of two parts and is of the form: $\varphi_{out} := \varphi_C \wedge \hat{\varphi_{in}}$. The right part of the formula $\hat{\varphi_{in}}$ describes the flattening original formula in which we replace with So
	lution:
	There is no solution available for this question yet.
31.	[Self-Assessment] For the following \mathcal{T}_{EUF} -formula, compute an equivalid formula φ_E in the Theory of Equality \mathcal{T}_E , by applying Ackermann's Reduction.
	$\varphi_{EUF} := f(x,y) = g(x) \rightarrow [f(g(y),z) = x \vee \neg (g(z) = y)].$
	Solution:
	There is no solution available for this question yet.
32.	[Self-Assessment] Consider the following formula in \mathcal{T}_{EUF} .
	$\varphi_{EUF} := f(g(x),h(y)) = a \ \lor \ b = f(u,v) \ \to \ k(a,b) = u \land v = k(x,y)$
	Use Ackermann's reduction to compute an equisatisfiable formula in \mathcal{T}_E . Solution:
	There is no solution available for this question yet.

33. [Self-Assessment] In the context of Eager Encoding within the Satisfiability Modulo Theories (SMT), explain how instances of reflexivity, symmetry and transitivity are handled within the Graph-based Reduction. Solution:

There is no solution available for this question yet.

35. [Self-Assessment] Consider the following formula from \mathcal{T}_E .

$$\varphi_{EUF} := \left\lceil f_y = g_x \wedge f_y = y \right\rceil \vee \left\lceil f_y = f_x \wedge y \neq f_{gy} \right\rceil \vee \left\lceil f_x = f_y \wedge f_y = y \right\rceil \vee \left\lceil f_x = f_{gy} \wedge f_y \neq y \right\rceil$$

Use the graph-based algorithm to construct an equisatisfiable propositional formula φ_{prop} . What would you have to change if you would want to check φ_E for *validity* instead of satisfiability? Solution:

There is no solution available for this question yet.

36. [Self-Assessment] Consider the following formula from \mathcal{T}_E .

$$\varphi_{EUF}$$
 := $x \neq y \land y = g_x \lor g_x = g_y \rightarrow \neg (g_y \neq z \lor z = f_x) \land \neg (f_x = f_y \land x \neq z)$

Use the graph-based algorithm to construct an equivalid propositional formula φ_{prop} .

Solution:

There is no solution available for this question yet.

37. [Self-Assessment] Consider the following formula in \mathcal{T}_{EUF} .

$$\varphi_{EUF} := f(x) = f(y) \land f(y) = y \lor f(g(x)) = f(f(y)) \land g(x) = x \tag{7}$$

$$\forall f(x) \neq f(y) \land y \neq g(f(y)) \land x \neq g(x) \tag{8}$$

Use Ackermann's reduction to compute an equisatisfiable formula in \mathcal{T}_E .

Then perform the graph-based reduction on the outcome of Ackermann's reduction to construct an equisatisfiable propositional formula φ_{prop} . Solution:

9.3.3 Lazy Encoding

38.	[Self-Assessment] In the following list tick all statements that conform to the lazy encoding approach for the implementation of SMT solver.
	$\hfill\Box$ Lazy encoding is based on the interaction between a SAT solver and a so-called theory solver.
	\square Lazy encoding involves translating the original formula to an equisatisfiable Boolean formula in a single step.
	\square Lazy encoding is based on the direct encoding of axioms.
	\square Lazy encoding starts with no constraints at all and adds constraints only when needed.
39.	[Self-Assessment] Satisfiability Modulo Theories (SMT) solvers can be implemented via lazy encoding or via eager encoding. Give a short explanation about both approaches and point out their main differences. Solution:
	There is no solution available for this question yet.
40.	[Self-Assessment] To decide SMT formulas, the lazy approach uses a theory solver in combination with a SAT solver. Explain what a theory solver is. Explain what the inputs and outputs of a theory solver are and how it is used within the lazy encoding approach. Solution:
	There is no solution available for this question yet.
41.	[Self-Assessment] In the following text fill the blanks with the missing word(s). One way to solve Satisfiability Theories problems works as follows. First, the propositional skeleton of the formula in question is given to a solver. If this solver returns, we terminate with answer In the other case, the solver returns a, which is a
	of theory literals. This can be given to a solver that can decide the fragment of the theory in question. If this solver returns
	we terminate with answer Otherwise, we add a to the propositional skeleton, to prevent the same
	from occurring again, and run the solver on the augmented propositional skeleton. This loop is repeated until either the solver returns
	(in which case the answer is), or the solver re-
	turns (in which case the answer is). This entire procedure is called encoding. Solution:
	There is no solution available for this question yet.
42.	[Self-Assessment] In the following list, mark all items that are true for an eager encoding procedure for \mathcal{T}_{UE} with \mathbf{E} , mark all items that are true for a lazy encoding procedure with \mathbf{L} , and mark all items which neither belong to an eager nor a lazy encoding procedure with \mathbf{N} .
	Only one call to a propositional SAT solver is required.
	A propositional formula that is equisatisfiable to the original theory formula is constructed before calling any solver.

	A propositional SAT solver and a theory solver for the conjunctive fragment of the theory interact with each other.
	For a theory-inconsistent assignment of literals, a blocking clause is created.
43.	[Self-Assessment] Use the Congruence-Closure algorithm to check if the following assignment for the equalities is satisfiable.
	φ_{EUF} := $x = y \land y = f(y) \land y \neq f(x) \land z = f(z) \land f(z) = f(x) \land z = f(y)$
	Solution:
	There is no solution available for this question yet.

44. [Self-Assessment] Explain for what the *Congruence Closure* algorithm is used. What are the inputs and outputs of the algorithm? What does the algorithm compute? Explain the individual steps of the algorithm. Solution:

There is no solution available for this question yet.

45. [Self-Assessment] Consider the following formula in the conjunctive fragment of \mathcal{T}_{EUF} .

$$\varphi_{EUF}$$
 := $f(a) = c \wedge f(c) \neq f(d) \wedge b = f(c) \wedge a \neq f(c) \wedge c = d \wedge b \neq d \wedge a = c$

Use the *Congruence Closure* algorithm to determine whether this formula is satisfiable. Solution:

There is no solution available for this question yet.

46. [Self-Assessment] Consider the following formula in the conjunctive fragment of \mathcal{T}_{EUF} .

$$\varphi_{EUF}$$
 := $a = b \land c \neq d \land f(a) = c \land f(b) \neq f(c) \land f(a) = f(d) \land f(b) = c \land f(d) = f(c)$

Use the Congruence Closure algorithm to determine whether this formula is satisfiable. Solution:

There is no solution available for this question yet.

47. [Self-Assessment] Consider the following formula in the conjunctive fragment of \mathcal{T}_{EUF} . Let $a \neq b$ be a shorthand notation for $\neg (a = b)$.

$$f(b) = a \land c \neq d \land f(e) = b \land d \neq f(b) \land f(a) = f(e) \land b \neq f(b) \land a \neq e \land f(a) = e \land a = c \land f(b) \neq e \land d = f(c)$$

Use the Congruence Closure algorithm to determine whether this formula is satisfiable. Solution:

10 Temporal Logic

10.1 Lecture

- 1. [Lecture] Translate the following sentences in computation tree logic CTL^{\star} .
 - In every execution the system gives a grant infinitely often.
 - There exists an execution in which the system sends a request finitely often.

Solution:

- The Boolean variable g represents "The system gives a grant." $\varphi_1 \coloneqq AGFg$
- The Boolean variable r represents "The system sends a request." $\varphi_2 \coloneqq EGF \neg r$
- 2. [Lecture] Given the following execution word w of a Kripke structure. Evaluate the formula φ on w. Evaluate each sub-formula for any execution step using the provided table.
 - $w = \{\}, \{a\}, \{a\}, \{b\}, \{\}, \{a\}, \{a, b\}^{\omega}$
 - $\varphi = Xa \vee aUb$

Step	0	1	2	3	4	5	ω
a	0	1	1	0	0	1	1
b	0	0	0	1	0	0	1
Xa

 - $\varphi = Ga \rightarrow (Fb \lor c)$

Step	0	1	2	3	4	5		ω	
a	0	1	0	1	1	1	1	1	1
b	0	0	0	1	0	1	0	0	0
c	0	0	0	1	0	0	0	1	1
Ga									
Fb									
$Fb \lor c$									
$Ga \rightarrow (Fb \lor c)$									

Solution:

Step	0	1	2	3	4	5		ω	
a	0	1	0	1	1	1	1	1	1
b	0	0	0	1	0	1	0	0	0
c	0	0	0	1	0	0	0	1	1
Ga	0	0	0	1	1	1	1	1	1
Fb	1	1	1	1	1	1	0	0	0
$Fb \lor c$	0	1	0	1	1	1	0	1	1
$Ga \to (Fb \lor c)$	0	1	0	1	1	1	0	1	1

- 4. [Lecture] Given the following execution word w of a Kripke structure. Evaluate the formula φ on w. Evaluate each sub-formula for any execution step using the provided table.
 - $w = \{\}, \{a\}, \{\}, \{a, b, c\}, \{a\}, \{a, b\}, (\{a\}, \{a, c\}, \{a, c\})^{\omega}$
 - $\varphi = GFa \rightarrow (FG \neg b \land c)$

Step	0	1	2	3	4	5		ω	
a	0	1	0	1	1	1	1	1	1
b	0	0	0	1	0	1	0	0	0
С	0	0	0	1	0	0	0	1	1
GFa									
$FG \neg b$									
$FG \neg b \wedge c$									
$GFa o (FG \neg b \wedge c)$									

Step	0	1	2	3	4	5		ω	
a	0	1	0	1	1	1	1	1	1
b	0	0	0	1	0	1	0	0	0
С	0	0	0	1	0	0	0	1	1
GFa	1	1	1	1	1	1	1	1	1
$FG \neg b$	1	1	1	1	1	1	1	1	1
$ FG \neg b $ $FG \neg b \wedge c $	0	0	0	1	0	0	0	1	$\frac{1}{1}$

- 5. [Lecture] Translate the following sentences in computation tree logic CTL^{\star} .
 - For any execution, it always holds that whenever the robot visits region A, it visits region C within the next two steps.
 - There exists an execution such that the robot visits region C within the next two steps after visiting region A.

Solution:

We use the following Boolean variables:

- a represents "The robot visits region A"
- b represents "The robot visits region B"
- c represents "The robot visits region C"
- $\varphi_1 := AG(a \to Xc \lor XXc)$
- $\varphi_2 := EG(a \to Xc \lor XXc)$

- 6. [Lecture] Translate the following sentences in computation tree logic CTL^* .
 - The robot can visit region A infinitely often and region C infinitely often
 - Always, the robot visits region A infinitely often and region C infinitely often.
 - If the robot visits region A infinitely often, it should also visit region C finitely often.

We use the following Boolean variables:

- a represents "The robot visits region A"
- b represents "The robot visits region B"
- c represents "The robot visits region C"
- $\varphi_1 := E(GFa \wedge GFc)$
- $\varphi_2 := A(GFa \wedge FG \neg c)$
- $\varphi_3 := A(GFa \to GFc)$
- 7. [Lecture] Given the following Kripke structure \mathcal{K} . Does the initial state s_0 of \mathcal{K} satisfy the following formulas?
 - $\varphi_1 := EXX(a \wedge b)$
 - $\varphi_2 := EXAX(a \wedge b)$

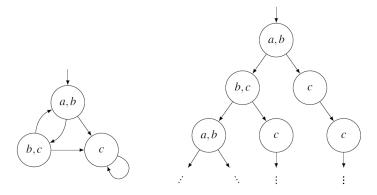

Figure 1: Left: Kripke structure of Example 7, Right: Corresponding computation tree

Solution:

- $s_0 \models EXX(a \land b)$
- $s_0 \nvDash EXAX(a \land b)$
- 8. [Lecture] Given the following Kripke structure \mathcal{K} . Does the initial state s_0 of \mathcal{K} satisfy the following formulas?
 - $\varphi_1 \coloneqq EXp$
 - $\varphi_2 \coloneqq EG \neg p$

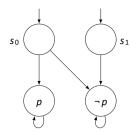

Figure 2: Kripke structure of Example 8

- $s_0 \models EXp$
- $s_0 \models EG \neg p$

10.2 Self-Assessment

9. [Self-Assessment] Give the definition of a *Kripke structure*. Explain the components of the tuple a Kripke structure consists of. Give an example of a Kripke structure in the representation of a graph.

Solution:

There is no solution available for this question yet.

10. [Self-Assessment] Give the definition of *paths* and *words* of Kripke structures. Give an example in which you draw a graph representing a Kripke structure, and give one possible infinite path and corresponding word.

Solution:

There is no solution available for this question yet.

11. [Self-Assessment] What does a *computation tree* of a Kripke structure represent? Give an example in which you draw a graph representing a Kripke structure, and draw the first 3 levels of the computation tree of this Kripke structure. Solution:

There is no solution available for this question yet.

12. [Self-Assessment]

The temporal operators describe properties that hold along a given infinite path ρ through the computation tree of a Kripke structure. Given two formulas φ and ψ describing state properties.

- Which are the properties that ρ needs to satisfy such that $\rho \vDash G\varphi$?
- Which are the properties that ρ needs to satisfy such that $\rho \vDash F\varphi$?
- Which are the properties that ρ needs to satisfy such that $\rho \vDash X\varphi$?
- Which are the properties that ρ needs to satisfy such that $\rho \vDash \varphi U \psi$?

There is no solution available for this question yet.

13. [Self-Assessment] Consider an ordinary traffic junction with incoming lanes from the north, south, east and west. We want to formulate relevant constraints that a traffic light system has to fulfill.

Give a set of propositional variables that model whether the north and south or the east and the west get the

- green,
- yellow or
- red

light, respectively.

Formulate the following sentences using CTL^* :

- (a) The north/south lanes will never get the green light at same time as the east/west lanes.
- (b) Whenever the north/south lane receive the green light it will stay green until it changes to yellow.
- (c) When the east/west lane has the red light, it will eventually get the yellow and red light until the light switches to green.

Solution:

There is no solution available for this question yet.

- 14. [Self-Assessment] Given the following execution word w of a Kripke structure. Evaluate the formula φ on w. Evaluate each sub-formula for any execution step using the provided table.
 - $w = \{\}, \{a\}, \{\}, \{a,b\}, \{a\}, \{a,b\}, (\{a\}, \{a,b\}, \{a\})^{\omega}\}$
 - $\varphi = FGa \rightarrow FGb$

Step	0	1	2	3	4	5		ω	
a	0	1	0	1	1	1	1	1	1
b	0	0	0	1	0	1	0	1	0
FGa									
FGb									
$FGa \rightarrow FGb$									

Solution:

- 15. [Self-Assessment] Given the following execution word w of a Kripke structure. Evaluate the formula φ on w. Evaluate each sub-formula for any execution step using the provided table.
 - $w = \{a\}, \{a\}, \{a\}, \{b,c\}, \{a\}, \{a,b\}(\{a\}, \{c\})^{\omega}$
 - $\varphi = aUc \vee Fb$

Step	0	1	2	3	4	5	U	υ
a	1	1	1	0	1	1	1	0
b	0	0	0	1	0	1	0	0
С	0	0	0	1	0	0	0	1
aUc								
Fb								
$aUc \lor Fb$								

There is no solution available for this question yet.

16. [Self-Assessment] Give the definition of the syntax of the computation tree logic CTL^* . In particular, give the definition of state formulas and path formulas. Solution:

There is no solution available for this question yet.

17. [Self-Assessment] Give an intuitive explanation of the semantics of computation tree logic CTL^* . Therefore, explain the semantics of the introduced path quantifiers and temporal operators with respect to the computation tree of a Kripke structure. Solution:
